

INNOVATION MARATHON

See our latest Innovation book, [The Innovator's Bible](#), starting on page 25

I have been told by so many experts to preview, for readers, my very best speech, on innovation, which originally was 64 pages in length. Though this condensed version teases with topics many of our other books cover (i.e., business, politics, prophecy), the *Innovation Marathon* version in our book, [Design Your Future: Innovation Strategies for the Twenty-First Century](#), cuts out all but the ideas on practical innovation, and still totals 54 pages (and with pictures)! You will not find another speech on innovation, anywhere, as inspirational or educational, and it probably adds *well* over one hundred other new product (or service) ideas, beyond our 4,600, or so, already found in our four major books. Please go read that speech in its entirety, as it can make any person a great innovator, even if they have no initial skills!

PLEASE NOTE:

As part of this Presidential campaign, we will *securely and freely* (i.e., no charge) consult any **Fortune 2,000 corporation** based in America on **strategy, efficiency, growth, solving challenging problems, R & D/new products, advertising or architecture.**

Simply contact us to set up a confidential counsel (AAorg2020@gmail.com).

Introduction...

Context generates contents. In response to a debate with an avid Trump supporter, the following, excellent treatise on innovation resulted. As innovation is essential to our economy, that backdrop is included, but if economics or politics bore you, skip straight to 'Day 1.'

Background (1/12/18)

The guy said he loves DJT because, 1. The economy is great, 2. unemployment is low, and, 3. Religion is protected.

First, I NEVER defend people (like Obama or Hillary), per se, only principles and ideas, so that person has ZERO argument that if you're anti-Trump, you were ever a supporter of any of their bad ideas!...

Religion is protected? Christianity was NEVER under assault. That guy probably does LITTLE-to-NO evangelism or discipling, and his dumb belief that going to church is Christianity was NEVER assaulted in the past eight years!

The ONLY thing I can venture that he was referencing is gay marriage, and alt-right IRRATIONAL fears that 'the Muslims are coming,' the sky is falling!

CHUMP will NOT change national gay marriage. There are still more minor issues related thereto, concerning trans laws potentially allowing perv old men dressing up like girls in bathrooms and locker room showers, boys (NOT trans) ever being allowed in girls' bathrooms, and Christian business owners forced to be part of gay wedding events.

But the persecution of Christians in America is simply a MYTH! That guy will absolutely NOT practice biblical Christianity any better (or worse) under CHUMP, so there is ZERO gained for 'religious protections.'

And FAVORING the Jews over Arabs is a sin, though America can be pro-Jews, and that decision RUINED our international status as leaders, who could possibly broker peace. I will NOT waste time on all DJT's failed policies, as I simply don't care. Brokers NEVER take sides, so, again, religious practice suffered a YUGE loss.

Economics (1/13/18)

Now let's address the more boring issue of DJT economics. Here, point-by-point, is EXACTLY what happened with the America economy. It was GREATLY harmed by sub-prime STUPIDITY (i.e., loan to people who can't pay you back), which led to bank collapses, and bailouts, and stagnant growth or eight⁺ years.

People lost homes, jobs, confidence. Then you add a BAD Obamacare (ONLY because it was NOT good enough, in many ways), and that was an ANCHOR on U.S. businesses. Because CHUMP did EXACTLY what I, and others, suggested (i.e., lower business taxes to 25 percent, or so—he went too low!), business owners are emotionally elated.

NOT workers, NOT people NOT in the stock market... business owners and the rich. So the stock market rises, because CHUMP lowers regulations and taxes. We don't know if those regulations hurt or help consumers and workers. You don't even know what they are, likely—you just hear lower regulations, and believe CHUMP is pro-business/on your side, so your emotions get IRRATIONALLY giddy. Note: Irrationally.

Businesses have lower expenses, as taxes are lowered, so more money to use. ONLY 81 of them, so far, have used any for employees. NON-employees LOVE the excess; they R the MINORITY elites. Nothing has change or the majority, yet that BOY is excited about the economy. Stupid person, if I must say so myself.

This is EXACTLY how bubbles occur... giddy irrationality, and all bubbles burst, because they are built on a house of cards, myths, lies, fraud, hollow euphoric vapors. WHO CARES? My 401K jumped! That is the mind-set of the elites, but ONLY for awhile! The smart ones cash out before the crash. The less astute take a bath. But, again, the majority sees NOTHING.

Now, with lower INDIVIDUAL taxes, they WILL see some increase in take-home pay. Yippee!? NOT yippee skippee. Why? Isn't, as Limbaugh said, more money always better for the working stiff? NOT if its built on a LIE. Remember, sub-prime was a LIE.

QE3 is a LIE. Borrowing from China to fund tax decreases is a LIE. And one day China is going to realize their investment is NEVER going to be repaid. EVERY credit card company has standards for what to lend to whom, based on payback probability. Smart ones NEVER risk NOT being repaid, and so long as their corpus gains acceptable returns (Ex.: interest on our debt), that investment is money making money by itself, for China.

But you may have heard of government shut downs, and debt ceiling/default concerns? Our debt is a DRAIN on the swamp—an anchor to REAL vs. fake/lie/fraudulent/propped-up economic growth.

Investor businesses are always on the radio hocking fears of economic collapse, but in the case of dollars unbacked by anything but faith, debt unable to be repaid, possibly ever, and funny money printed by the feds, (behind your back, so you never know, hoping you never feel the impact—faith-again), a collapse is certain.

And WHEN it occurs, just like the sub-prime bubble, the takers (those who got in, then got out of the stock market at the right time) are off scot free, and the rest of us are left holding the bag—paying the bills. They might retire, and move away from America, for all we know, like rats fleeing the Titanic! Now let's address unemployment lowering. That sounds GREAT! I'm ALL for the little guy. But these are NOT good-paying jobs, and they are, again, partly a result of the ideas I proposed three⁺ years ago, of lowering immigration/controlled borders. Less worker competition.

And with businesses with more money from less taxes, they can hire more, but often NOT great pay. Businesses are not evil, but they are NOT incentivized to pay more than is necessary. So any gains are a mirage, and temporary. Eventually (and even on Thursday), China is going to see it is being taken to the cleaners by undisciplined U.S. politicians!

They will raise the rent on our loans. Money will cost more. Inflation ensues. And if it gets worse than that, they'll cut us off, like a drunk at a bar, find others to lend to, or continue to make the Yuan the world's default currency. All because they have NO chance to get their principal back!

So for the short time CHUMP will be in office, his policies will SEEM/feel/look like success, for more money to (most) all. But WHERE DID THE MONEY COME FROM? China, increasing debt, U.S. bills unfunded (already spent, in many cases), and printing money. That means your dollar buys LESS. Your raise from a lower tax bracket won't buy you more stuff, in a few years, but CHUMP will be gone, and more responsible people will have to clean up this mess.

And some of them will have to, again, get taxes for all groups to a level that can sustain federal spending, if there's any hope of ever paying down the debt. Politicians DON'T care that Uncle Sam has maxxed out all his credit cards, because that keeps them in cushy jobs!

I KNOW this lesson is over your head, in your own mind, but I've made it as simple as I know how. Try an economics course, if you think my explanation was lofty! In summary, all is NOT as it seems. The positives are TEMPORARY, and the negatives of debt WILL crush us, someday.

So let's address the logical next accusation... I'm just a Negative Nellie worry wart who hates CHUMP—that's why I said all this. If you are NOT one of those rats who will rob the Treasury and retire in Tahiti, you will live through the aftermath!

And letting the rich get a lion's share of benefits from an un-needed tax cut, so they alone can access insider trading, bulk electronic buys, hedge fund and investment banker friends, to take advantage of stock deals you hear about hours if not days later, is NOT fair or good to any but them!

Limbaugh mocked liberals for wanting things fair. His ilk loves unfairness. God does not, and most reasonable people do not. We admire winners in sports, who win, according to the rules, and fair and square. Fairness is NOT a sin, Rushie BOY.

I'll say again, if you see these type lessons taught in simple, and somewhat entertaining terms/ways, written spontaneously, feverously fast in the middle of the evening, accurately, in content (vs. worrying about typos), with ZEERO premeditation or thoughts before starting, TELL ME THE SOURCE! I want to watch, too!

Economics (Continuing)

One final image for the lowest IQ's among us... houses of cards fall. If you're a Christian, and giddy about these policies, houses on the sand get washed away, in torrential winds and floods. Jesus, 101 (Mt. 7:24-27). NO economic plans based on irrational exuberance are soundly developed plans. Common sense 101.

And consumer confidence WANES when economic reality seeps in. Limbaugh even touted small business confidence is HIGH! Of course. They get more money to work with. But the money is WORSE than robbing Peter to Pay Paul. It's sham money! It's taking the U.S. to Greece, at current pace! You DO recall how they fared, don't you?

The ONLY thing holding up the U.S.'s house of cards fail is our reserve currency status (i.e., ability to print money thereby), and lying politicians who say it's all good. If you trust FEELINGS (or are selfish vs. a selfless, pro-America patriot), you're giddy about Chump's economy. If you know facts, like many investment gurus, you wonder when the bottom is going to fall out! Which are you?

SOUND economic policies bolster a nation. Myths and lies destroy them, but usually not before the crooks who cooked up such schemes are out of office, or have left the country.

If America wasn't America, we could NOT get along as long with this fake economy! \$21 trillion debt is certain, with Chump's plan. That's NOT fiscally responsible, one iota.

Now, let me NOT sound like the Grinch who stole Chumps Christmas gift. Here are the standards by which our economy COULD get better, well past the *emotional* bubble: 1. The debt paid down. 2. Government streamlined. 3. Anyone who wants a job has a job. 4. Good paying jobs in America. 5. NO more printing funny money, over time. Businesses growing from REAL sales increases (vs. government bailouts, and freebie giveaways with money we don't have).

Every G-20 nation has good-paying jobs, given their standard of living. There's NO way to get them to come here without incentives. And our cost of living is higher than most, especially NON-first world nations. So instead of hoping to repatriate businesses, or lure foreign ones here, in YUGE numbers, the U.S. has to grow state of the art, cutting edge, best practices businesses, and industries of the future, ahead of our competitors. That's ALL I'll tell you for free. Read our books!

P.S.: EVERY, I mean EVERY industry that's profitable, that's being pursued anywhere on the globe, successfully, A must match and beat. China's into YUGE ships. Russia's into AI. Self-driving cars are developed in Asia. Oil alternatives. Futuristic transport and infrastructure (say Dubai). You have

to STOP admiring those, and BEATING them! There are SO many other examples I refuse to give, for free.

If the U.S. does NOT see every success of any and all other nations as cutting into our economy, and BEAT them, we WILL play second fiddle. China is already whipping our tails (I won't use Trump's word from yesterday)! It's competition. Friendly, by some international rules, but it's win or be second! Let's SOUND, but NOT be racist... Indians and Chinese kick U.S.'s tails in education! I know, because I live among them. UNACCEPTABLE! Little secret... they will NOT let up, or revert.

They may come here and become somewhat Americanized, but their cultures (i.e., historic values) are engrained, and STEM disciplines are their forte. U.S. needs to learn how to keep their best and brightest here, and train U.S. students either to compete, or find another 'competitive advantage.'

I have five broken machines in my home, at present. ALL my family's clamoring for ME (of all people) to fix them. I delay, tinker, fail, because that's NOT what I'm good at.

SMART people find their niche, and milk it to the max. US's niche is leading, morality, envisioning better futures, innovation, hard work (Ex.: we do NOT take off all of August, like some in the E.U.).

We have to be SMART, too! We CANT compete with \$2 a day workers, or the oil reserves of the Saudis, or the math skills of Asians and Indians, for the most part. And those two groups work OBCESSIVELY and excessively! Their kids stay up until past midnight, and one killed herself from the pressure. They will rule us if we can't compete in our own niches—maybe not the same niche as them.

China. Study it! Resources of masses of humanity, lower-educated, and needing to survive. What does U.S. possess? Milk those assets! Lead. Compete. Win. And when and as you do, never arrogantly, or at the expense of other nations.

Zig Ziglar said you can get whatever you want. if you help others get what they want. Other nations want prosperity and peace. Help them get it! Duh 101. America is the most consuming nation on earth. My Chinese ex-neighbors bought little. They valued an empty home. That type is NOT going to propel the U.S. economy by consuming!

You either get other nations to admire you lifestyle, or cater to more basic needs—NOT luxuries. And every international transaction has to be win-win. I NEVER repeat business with anyone who screws me (it happened last week). ALL people like that when they get taken, even nations!

Resources are limited. Find replacements. People want to be safe, comfortable, have fun, and enjoy, have easier work conditions, more time off, better pay. Find ways, through products and services, to give them just that—globally. In that way, America can lead, and win!

Politics

Weather disaster averting technology, military lives protection, disease eradication, pollution reducing innovations, cheaper and faster everything. These are the BIG picture goals. How-to's depend on SMART scientists and engineers, and they NEED to be

American scientists and engineers. Study China. They decided to be service providers to American.

They have all our money, now, because they out-smarted us. Look at Dubai. Where, in America, does an entire city attract the world's super-wealthy, to have their bucks here, rather than there? It DOESN'T EXIST. Why not? Lazy thinkers (or dreamers) in America! There are SO many more ideas I could list. "Everything begins with an idea."

—**Earl Nightingale**

The BEST thinkers need to be here. Pigs get fat, but hogs get slaughtered. So long as New York investment types are only in this thing for themselves, U.S.A. LOSES! I've said before, selfishness will ultimately destroy America. Innovation, new services, a much better education system are absolutely required!

But with a soon to be \$21 trillion debt, we can't do so with real money. Compulsory civic service of 20-40 hours a year, per person, NOT among those already in public service is how government functions can cost us LESS! And cutting all waste, and any lazy workers who work for government because they want it easier, or cushier—like many politicians! FIX IT!

I don't give one rat's _s_ what Wall Street "demands!" I care what common sense in the best interests of America demands! They want four percent growth. They're rich, already. Tell them to take a hike off a high bridge! Main Street is an EQUAL to them, in God's eyes (and we the people are the majority)!

Their taxes SHOULD be higher, by percent, than others, and Chump's flawed economic plan will make it incumbent on someone to clean up his mess, and play the bad guy, so federal expenses get paid (vs. accounting tricks, funny money and increased borrowing).

NOT ONE legitimate, sustainable thing has changed, to make U.S. businesses stronger under his bogus plan. He simply gave away money we don't own. HOW could that work? Printing and borrowing! Investors who are smart will make more, so MAY pay more in taxes (depending on how smart their tax avoidance skills are), but they are the minority. Others will get a little more pay, so they will pay a little more in taxes, but that doesn't make up for his giveaway!

It is faith/confidence that is keeping the American Titanic afloat! Any "indicators" that turn negative, then inspire that psychology to spread, will crash down our doors. On Thursday, China already said they're cutting back on buying up U.S. Treasury bills. Indicator number one, from our number one lenders. Am I boring you?

Here's how REAL economic foundations get built: Taxes able to pay a country's bills, NO bloat in budgets, top of the line education graduates, as low taxes as can be had, efficient infrastructure that works, the best minds and innovations, great trade deals, including with new nations—not just changing old treaties.

Honest and smart politicians (so leading HAPPENS), international respect (so nations work with vs. against us), a lifestyle you can't 100 percent emulate elsewhere, so the best skills and talents stay here.

Why would a smart Indian or Chinese person stay here, if they're used to where they came from? Make small versions of that here! Duh 101.

Develop other nations. We already get cheap products from China, high tech expertise from India. What about medical personnel? Scientists and engineers? Lure them here! There are too many lawyers, grabbing for money\$ from people who make the money... businesses! Jobs of the future, globally, need to be trained HERE, and the best colleges!

I'm certain you read messages like this every day in the newspaper, in books, hear them on TV—NOT! There's a reason. My point is, you have to have better thinking! Feelings are a vapor, a myth, a phantom mirage. America has to develop the best thinkers and innovators, or we will be slaves of other nations!

If you can make money at it, LEAD in the arts, in entertainment, but also LEAD in life's basics, for all the world to benefit from. Solve all of life's problems, HERE, then transfer that solution everywhere--for a (fair) price. I'm so da_n tired of wimpy and 'stinkin thinkin' in America!

D.C. at loggerheads, and doing nothing to IMPLEMENT these type thoughts! Demonize your opponent so idiots' emotions get riled up, so they're angry, and vote for you to kill the other team. You're so da_n stupid to put up with that frivolity, voters! I'm 'gonna cut out here, as I don't 'wanna work on this chapter all weekend for my book! 'Selfish.'

But I must... Study Amazon, EBay, Uber and Space-X/Tesla. NEW ways of thinking. If you can't figure out what those businesses did, you deserve to be paid like a grunt. They changed status quo business. Describe current state business in America, and other nations. Envision it better, and build that solution! I can!

Every one of those businesses (except Elon Musk) found a way to be cheaper, and undercut the big boys in their targeted industries. List Fortune 500 companies' products and services, and find a way to out-do them. Same goes with every other nation's top industries. Start by listing those, per country!

Innovation Day 1

(1/13/18)

How do you envision? Imagination. Throwing out the rules. Let's try Coke. I'd suggest a flavor JUST LIKE it, that has healthy benefits, zero calories, actually increases calorie burning in your metabolism, a different color (blue), and avoids patent infringement. Call it Stoked, and avoid trademark or other intellectual property infringements.

Why can't a drink start to cure diseases? Why have any negative aspects, like the acid that tears you up inside? Let scientists and chemists find a better or different way to have fizz, or carbonation. Mix it with Red Bull capabilities, for energy! Thinking aloud.

We have an entire book devoted to how to become innovative. I've documented more than 4,645 new product inventions. The Today show hosts listed ideal products they'd like to see. If it's outlandish, you'll reject it, but some R and D team will work on it, and make the future present... and let you buy it!

American Airlines. List every negative and positive of air travel, and fix the negatives! Too crowded, flight delays, cheap food, small bathroom, no luggage space, nickel-and-dime you on costs/fees, layovers, weather delays. FIX ALL THESE, and know that every expensive fix gets cheaper with increased buyers!

Pollution. Texas has a machine to capture and convert carbon into energy. Innovative thinking. You start with refusing to accept status quo, then dream of perfect state, and work backwards. I want a robot to fix all five of my machines (TV, car, lights, toilet and treadmill)! I'm tired of being hassled by my family for these break-down's!

I've NEVER texted, or owned a smart phone. I told my eldest son on Thursday, I will buy one when it's expandable, and 100 percent speak-to, by MY orders—NOT it requiring me to learn its commands. I mean like an accordion--all four sides pull out, to double its size from a size that fits in my pocket, with NO breakable face, water-proof, and self-fixing, if it breaks.

You can laugh at ideal-state thinking, but that's where ALL future product design begins! Hoda Kotb wanted a machine to organize her closet. Easy! Bar codes sewn into every item, and computer/robot with laser knows exactly each items color and dimensions, so it organizes by color and size, for the robot to select/grab, and put into that order. Engineers can do this. They have to have leadership. Ideas!

I want all my food to be good for me, and taste good, and fill me up. Work on that goal, science! I want a pill for my metabolism to burn faster.

I want a da_n computer that types what I'm thinking, as fast as I'm thinking, with NO typos. I beta-tested the Voice Commander in the 1990's, and it was NOT as good as Dragon Speech, but I want a tool to type my thoughts, NOT my spoken words! Until then, enjoy my many typos.

I want diseases ended, and weather catastrophes averted, through technology and medicines. Some doctors read that, and see their livelihoods ended. I don't care. This is Capitalistic competition, for the betterment of mankind! They'll find new needs for their skills. I want cars no one can be killed in, but lighter than today's cars.

How, you ask? New ideas! New materials. New applications of old stuff. Better research. Better belief in a better future. It ALL starts with better thinking. I want traffic ended. Layered skies. Cars on the bottom. Others (that can't fall) flying in level two. Planes in level three, and somewhere near earth, jet packs (under the flying cars)—each to its own designated air space, with technology so ne'er the twain shall meet in any collisions. Elon Musk wants underground transport and space transport. Those would be levels above and below my four. All, non-polluting, and not expensive. Do it!

Netflix ended Blockbuster. Uber and Lyft curbed taxi's. EBay and Amazon hurt retailers, and Wal-Mart added online and in-store pick up. You've GOT TO think outside your coffin (box)! Sam's Club thought they could have ultra product selection under one roof, and they revolutionized bulk buying! The Walton's. Nite, nite, John boy (I digress—Sam Walton; I'm sleepy).

In college, our marketing professor taught us of Delorean, and gas pumps funneled from above—not below—to keep hoses clean. Innovative thinking (say gull wing doors). How could libraries be modernized? Grocery stores? Gas stations?

I want drones or robots to deliver my grocery shopping! I want all my meals fixed for me—I'm busy! I NEVER want to stop at an intersection where no one is using it, but my light is red! I want a better world. I do NOT accept current state! I want a tool I speak

to and my foreign language friend IMMEDIATELY hears it in her language, with her accent, rightly interpreted. Babel in reverse!

I want a tool where no one can drown in the ocean, or be bit by a shark, or lose their bearings in a storm, and drift off course, or get ship-wrecked. Don't you? We ALL want a better world! Demand it.

I want what I want when I want, and I want it of high quality, low price, and I want it now. This American attitude can SPUR economic ingenuity! EVERY current state product fancier, or faster, stronger, cheaper, better-looking, and more functional, lighter, or better for the environment.

I mall walk—FAST! My sons asked, 'why are you always looking for the prettiest people?' BEAUTY inspires! I see a Lambo, and drool. I see a landscape, and get refreshed. Ugly products, houses, cars, streets, lawns, buildings depress. Dubai inspires! Dreams are made seeing what can be. Watch shows about it!

One Arab country land has a man-made island neighborhood in the shape of a palm tree. WHY must we accept boring grids? Why must we accept that U.S.A. has no more islands to develop? China makes new ones. We can too! A reasonable talk radio host envisioned NASA building a hotel on Mars. To me, that's ridiculous. Costly, dangerous, no food, no infrastructure, and for what purpose?

Ideas are good or bad. My son envisioned a game show where parents guessed which baby was theirs. Sounds interesting, until I asked how he'd get all newborns on the set right after birth, in the same hour. Ideas have to be good!

Mustard ice cream is a BAD idea! Good ideas sell. Beauty sells. Studies show the prettier the teacher, the better students learn. Help us beauty-challenged look better, with NO pain, or huge expense, though new cosmetic surgery technology. I know the boys in my high school sure clamored to be in the class of an ex-Playboy bunny!

Knowledge is KEY! If studies had NOT shown that proposition to be true, we would never know it. In the poorest-performing schools, hire hunks and babes. But they're going to cost you, because looks sell! I'm off on a tangent. Make everyday cars look like concept cars!

Interjection

[Private account:] The young thwart the old; the strong eat the weak. So it is in this world. But not in the world that is coming next.

Speak ye of the Millennium (~Revelation 20), or something else?

[Private account:] II Pet. 3:10

That's POST-Millennium! We have seven years on earth (for the non-Christian), then 1,000 years for all saints, before those two verses occur (if I recall my details right; I've written two books on it, but six years ago). New heaven and new earth. Ultimate, eternal state! John 3:16, for others!

And my fine friend makes a great point. If prophecy intervenes, NONE of this will be experienced by you—only those who enter the Millennium. But I digress. Wars could lessen if the threat of engaging one were too high for an aggressor to consider! #Think!

Innovation (Continuing)

What do we hate? That's a product opportunity! I hate slow drivers. New laws or products could solve that. You tell me what they might be, so I'm not the only one doing all the thinking. I hate obesity. I hate rudeness. I hate discrimination, and violence, and arrogance. Fix them. Got any ideas?

Let the students become the teachers. Learn to innovate, by thinking better! Not just watching stupid, meaningless entertaining videos for hours! Think. Learn about great people, and great companies and products. Learn what made them think of those ideas. Why are they great? Imitate them! Be great! Bye.

P.S.: I see Greyhound trending. The \$2 Megabus found a way to undercut them. The future belongs to those who do things better. How could you put IBM outa business? Crazy question, but if you don't ask it, you'll never try. Sears and J. C. Penney sure lost out when online people out-thought them! The survival of your business becomes at stake, when you don't.

We used to have McDonald's everywhere. The upscale trends hurt them, significantly! NO sophisticate would be caught dead there. You've got to know trends! What new thing could happen for Pizza? Pizza balls? Snacks? Chips? Upside-down pizza (and yes, I have a definition in mind). Bottled water could add vitamins, to be healthier. Cut out middle men! Think new!

Bikes. They can get your pants greasy, fall over, catch you in the rain, have flats, be splattered with mud, tire you out, cause sunburn, be stolen, and offer you no refreshing food. FIX ALL THESE PROBLEMS with bikes! You never thought about it, did you? You accepted status quo. Your problem, not mine! Think different.

Toasters. Boring. You also never know exactly what color will come out with different settings. Have an exact color code swath you choose. And you thought they were fine and dandy? They also gather crumbs, which stink when they burn. Have them discard that rubbish! You also don't know they're finished, unless you look (or hear them pop up). Why not a mini alarm, or notifier, or text, when through?

Smart toasters. They're making smart refrigerators already! They can order your groceries when stocks are low. You should tell a tool what you want to cook for dinner, and a robot gathers the ingredients. This is not that far-fetched, now, is it? #Think!

My pantry and refrigerator should notify me what items are going bad in the next week! Why do I accept any less than that standard? Compromise! Never compromise. And in life, live that way, modeled after this great hero!: <http://bit.ly/2o6GxDa> But I digress. It's 3 am—what do you expect?

Politics

I'm GLAD, after all, that that claiming Christian so challenged all I hold dear and true, for in addressing his FOLLY, here, look what sprang forth. He had thought we hung all

hopes of opposing Chump on Mueller. The Chump hung himself, to me, by THIS: <http://bit.ly/2mkbIKI>

I don't personally care if Mueller finds anything! I never even think of that probe. Anyone with an ounce of conscience or brain waves knows Chump has NO business guiding our nation, even as brain-dead hypnotized do-do's cling to his every word, ignoring his every evil, as their political savior!

I told my wife last night, before she went to bed, Christians and others like Chump TRULY behave like cult members. Yea, master, what demandeth thee of we? Amazing, non-independent, head-in-the-sand blinders on to all Chump's wickedness. Ignoring the GOP elephant in the White House room, BLINDED by sin!

Politics & Prophecy

How am I ever going to finish that chapter by the end of the day, Monday (i.e., my deadline)? Another near all-nighter? "...And miles to go before I sleep." If you've found any value in this 'word,' I hope you will buy our many books, when released, because our [free, 'religious'] website shows you the quality level of all their writing. Thanks.

P.S.: There is NO SUCH THING as a "beautiful" 50 foot border wall! tRump's superlatives dazzle the feeble-minded! ONLY nature is beautiful, compared to that. I gave you beautiful border solutions. Even Michelangelo murals on a wall would NOT compare to nature, using technology! Duh 101.

P.S.S.: I've said before, PMA and PC are the spirit of delusion of prophecy. Chump is the king of positivity words for delusional thinking! A full toilet would be sold as amazing, beautiful, awesome, fantastic, great, wonderful, huge—"believe me!" DONT believe snake oil salesmen, especially for the highest office in the land.

Day 2 **(1/15/18)**

One more day of full-time writing, so I'm continuing our needed innovation speech...

Airplanes and helicopters need a map app of ALL safe places for emergency crash landings, so pilots can try to avert human casualties on the ground (i.e., not just near airports).

All boats need automatic blow-up rafts stored-up in compartments, in case they start sinking (NOT just life rafts).

Planes could use a fire retardant reservoir, releasable in emergencies, or plane bottoms better able to endure impact on crash landings (of which there will be MANY, when the Rapture occurs).

Boxing. Circular rings give opponents NO corners to run to, to duck and hide, excepting MMA cages.

Stadiums. You could have MANY more fans have closer seating if it was enclosed, and seats filled the top tier to the ceiling, leaning on windows of a dome, and with more tiered layered floors closer to the field, angled down (so upper decks aren't blocked).

Stadiums would make a killing if they had restaurant that circled the field (like revolving restaurant atop a Houston hotel, called the Spindletop, where I got engaged, formally, after informally doing so in a parking lot, desperate before my wife-to-be left the country on vacation).

Could we need double the train tracks in America? The more of them, the less vehicular congestion on our busy roads.

Tennis. Oval courts would make more it interesting, as there would be more and less room to get a ball within the lines.

Skyscrapers need a fast, safe exit means from top floors (UN-like on 9-11), like controlled slides down staircase levels.

A walk bridge across the Grand Canyon would be nice (made safe, so there are NO suicides).

Politics & Prophecy

KNOWING the Tribulation is coming, "natural" disaster response and amelioration technology is prudent, if not too late! Bunkers won't even help you—NOTHING will, but people WILL survive it, and governments WILL be called upon to fix the physical consequences.

JUST LIKE Hurricane Harvey, political conservatives' THEORY will be shown for its FAILings, when even they ask for and demand help from government, and abandon their arrogant, 'self-reliance' rhetoric! You sure don't hear them refusing FEMA money in Houston, today!

Politics & Religion

I've got to, briefly, switch subjects, as it REALLY offends me how any "Christian" accepts political conservatism, hook, line and sinker. Selfishly idolizing riches is the OPPOSITE lifestyle from what Christ taught.

And any pastor who believes sermons actually generate full commitment is deceiving himself, no matter how biblical those lessons are. CHEW on that! YOU [pastors] would respond, because you already DID. That's SUBJECTIVE! You've GOT to discover how the sermons did! You won't, because you fear what you'd find, and ignorance is bliss.

I heard the best one, recently—FULLY theologically sound—but people's flesh/sin nature is STRONG, even as believers. You've got to use any and every biblical motivator/promise, and, even then, unless there is the personal touch, it rarely occurs, and for sure you [pastors] never learn if it does. I's irresponsible not to.

Politics

I plan to run for office. It would be my DREAM to go to businesses, and improve them. The old joke, when government says they're 'gonna help you—run, and hide your wallet—NEEDs to be OBLITERATED! NO trade secrets would be shared with competitors. I've worked for four competitors at the same time, and they'll testify I keep confidences!

You ACCEPT Congress passing one decent-sized policy matter in a quarter—MAXIMUM. I DON'T! I expect them to take eight months to work out logistics, then have 80-100 decent-sized, if not major solutions to our top priorities, and I KNOW I can make that happen! @Pledgers2020 @ImMadTooEdwin @2020Victory @PledgersARCHIVE (temporarily private, in early 2018)

Until I'm done writing my books, those accounts will remain private, as I'm not letting Oprah, or anyone else be there, any longer! You're NOT going to use my ideas for your own advancement! She was blocked, and her account was regularly at [@2020Victory](#). NO MORE. Sorry. Same for all others from the past.

For more on how to FIX politics, easily, fairly and rationally, please read our books, [Dumb as a Donkey](#), [Fat as an Elephant](#), and [Wit and Wisdom](#).

Prophecy

I'm NOT trying to sound Babel-like, because ALL these things get destroyed in a seven-year hell on earth, "soon." I'm designing what comes AFTERWARDS (i.e., the Millennium; Rev. 20). I'll be there. I want to see all these things. You won't be there if you never did John 3:16.

Personalized space craft. NOT ride sharing, like public transportation with strangers! Not all of them use deodorant, bathe regularly, or brush their teeth three times a day!

I LOVE moving sidewalks at airports. Have a slow and a fast lane, and make entire downtowns where lazies like me never have to walk—unless I'm mall walking for exercise! Climate controlled, and with interconnected skyscrapers, like downtown Houston, with glass wall skyways, even higher than floor two.

Let's address Babel (Gen. 11:1-9). That, Sodom and Gomorrah, and a general sin increase led to judgment on mankind. Noah's flood, and dispersing of people/the start of languages. Babel was architecture (i.e., the work of man's hands) trying to be God. Rev 16-18 shows the end of all our current society; decimated systems!

In MANY ways it's from us being like man in the days of Babel. Make this earth OUR kingdom, push out the King of Kings. It doesn't work that way, and won't work that way. That's why all these design ideas are mainly for a different era in history. You can strive for them, but they'll be crushed. Read our two books on bible prophecy, and our Twitter account, [@ProphecyForYou](#).

Day 3 **(1/16/18)**

I was SO intending ten hours of pure new invention ideas, yesterday, until my laptop froze, due to its mouse pad dying. I SO love the subject! Even Glenn Beck is on the subject this morning, and tomorrow morn, with an OBJECTIVE author who sees bad and good in artificial intelligence (AI). It WILL lead to Rev. 13!

Innovation (Continuing)

Science: Make an over-the-counter pill that makes you feel full; glasses that change tri-focal capabilities, depending on how far away you're looking; smart knives that unveil the blade only when you say so (i.e., safer); toilets using less water, that fill more when you go number two (i.e., conserves water); smart pill packs that speak or remind you when you haven't taken your pills, or warn if you already did, and may over-do it; pantries that pre-order desired stock when it gets low (i.e., shelf sensors); smart fashion mirrors that assess you (or your kids), when social faux pas occur (i.e., hair part is crooked, poorly shaven, neck collar sticking up, etc.); razor blades that never nick, or the same invention that retards grass growth available to never have to shave again, if you so choose.

Start with goals, then work backwards, for *innovation*. Ask how could this be better, or what's wrong with this picture?

Smart scissors open upon command (~no one gets cut); smart shoes propel you when you tell them to, (i.e., spring coils); smart ball caps that spin the visor to block sun from your face, whenever you move; heated showers, so you can rinse only when needed (i.e., saves water); massaging tub parts for back and butt; self-repairing bike tire flats.

#Innovation ideals...

Upper kitchen shelves come out, then drop down (vs. you reach up); trash compactors need to be resurrected!; toilet seat adjusts for big people (I'll leave that for your imagination to figure out why); massagers in a bed (NOT the entire bed, like at low-rent hotels); pillows play music until you're asleep; Rumba that picks up dog poop; home use water jet spraying toothbrush, to floss, using water.

The BIGgest barrier to innovation is saying 'that's stupid, impossible or far-fetched.' It may be, but you get the ideas out there, or there's nothing to work with! To see more, see our book on innovation, or our 4,700+ products!

One company in the world, per niche, could make it both feasible and profitable to specialize in custom (vs. mass appeal) products, given the global internet for ordering, and transport systems being global, now. And lead times could be longer, to produce product (Ex.: where there's not enough U.S. demand, but there is, globally)

Day 4 **(1/17/18)**

Self-flushing home toilet (by sensors); bring all that's at businesses home (an *innovation* method). In the future, if you have a job a machine can do by itself, you'll be unemployed! For example, Sam's Club now has MAINLY self-checkout lines, and our local public library has machines return library books from the drive-up window, and on the inside.

Here are blue collar jobs AI and robotics CAN'T 100 percent replace: plumber, tree trimmer (vs. ~welder; even computers can be used to design custom metal art). Trash pick-up in my neighborhood is by truck, and once self-driving vehicles are perfected, it will require NO human involvement.

Detectors are needed to identify black ice on roads, and tires with automatic micro-spikes retracting when serious icy road conditions are detected (like chains)—‘smart’ tires.

In innovation, you NEVER specify what century you are envisioning for, as technology and science determine that—just get the ideas out there!

For example, the Jetson’s, and space/jet packs have been envisioned for decades, but NOTHING to speak of, yet other things weren’t even thought of back then, and we use them every day.

Why can’t submarines speed at 100 mph, or more, excepting that we don’t want them crashing into mammal life? Sonar noise alarm/alerts could prevent that!

Is an unsinkable boat possible, if enough air is captured in an impenetrable hull, that is wide enough, compared to its height, so no wave could overturn it (or if it did, it would still be water-proof, as more like a bubble)? Could you have smart parachutes you could steer more, vs. be more at their and the wind’s mercy?

Could car air bags be designed to protect chest and below, but NOT hit you in the face, and made to adjust for the size of the driver at the time, so a person of short stature had the same chance as a tall Texan of not being smashed in the kisser?

Why are car heaters and air conditioners often NOT in back seats? Back seat drivers deserve as much comfort as people in the driver’s seat!

Day 5 **(1/22/18)**

Radar Magazine envisioned great things we can do when ~70 percent of jobs are automated, like a clean environment, and populating Mars. It will be ONLY what the rich want/require, or government mandates!

NBC said retail cashier, fast food and sales clerk are the top three U.S. jobs, and may be automated in the future. Let’s see where this leads: The least-skilled, with jobs machines will do. Huge unemployment, if not smarter or more or uniquely skilled to that of a robot. This WILL lead to one-world government.

Prophecy

Let’s explore how business innovation leads to Bible prophecy: As the rich gather up most of the world’s money, eliminating any need to hire people, they’ll hire just enough to keep them getting richer (i.e., no one buys their products if no one has a job).

In the best case scenario, bible prophecy delays, so we innovate ourselves to a great futuristic vision, and government and business work together to find jobs for all who want one, like more cops, robot repair, catering to the rich, etc.

But with trends going advantage rich, the people will force governments to increase control, as people need jobs the rich don’t have to have for their businesses. One-world government occurs 3.5 years after Israel signs a seven-year peace treaty. The first 3.5 years, disaster relief jobs will swell, as with medical, counseling, and new technology to de-blood water. Rev. 13 and 18 show our future—just NOT the timing.

Chapter 18 shows a collusion of politics, business, sex and greed, destroyed by God (Babylon: Man's greatest achievements in religion, business and government). And chapter 13 shows that after those 3.5 years, you CAN'T do business without an imbedded number in or on your wrist or forehead.

Verses 15 and 17 show machines will imitate life, nearly FULLY, and be able to speak, and kill/cause death to any who don't worship the coming one-world ruler. That chapter shows not all gets automated. Maybe machines are 666 'image?'

No business will be able to be conducted without that mark. We already have fingerprint and eye-scanning password access technology, and the ability for that world politician to be seen "everywhere" (implied in verse 3), with images/pictures and videos, available anywhere you go. The "image" could easily be imitation body double robots, that look just like him.

Let's bring this down to earth... the other day I was in an auto parts store, and their payment machine wasn't working, so I swiped every card I had. I had to buy elsewhere, but all my money was unavailable to me.

In that last 3.5 years of the Tribulation, government and business will be electronically connected to the point government controls if you access your private property, of money or investments, and you can't own or work in a business, or buy anything, unless you're in the system.

The infrastructures already there, in its infancy! So where do we go in light of this certain future? Even preparing for the HUGE, coming disasters would NOT lessen their impact. And since we NEVER know when it starts (though the signs are everywhere), you always do the right thing.

It's NOT wrong to do business, and innovation, and that's the wave of our current future. Just know it all fails, once prophecy hits, and be ready for that, today (John 3:16).

So, with that perspective (which timing we never know exactly), we continue as usual, but, HOPEFULLY, aware of acts and attitudes to avoid, like living just for things (Mt. 24:38), unaware of what could hit us at any time.

That time will be depicted by such things as Russia and Asian nations' rise, Jews in their land, people wrongly sure they're secure and at peace (I Th. 5:3), sin will be increased (Mt. 24:12; II Tim. 3:1-8), life's pace will be accelerated, with people going to and fro (i.e., advanced transportation; Dan. 12:4), wars and their rumors thereof will rise (Ex.: North Korea nuclear threat in Hawaii), signs in nature <http://abcn.ws/2CndSLU>

ALL these, and other "signs" point to the urgent imminence of prophecy. You prepare for bomb shelters, with false missile reports... you must be prepared to go through prophecy, if you choose NOT to heed John 3:16.

So, having FULLY warned you of this soon-coming threat, for you to NOT be prepared is on you. I'm continuing with innovation options totaling 4,700+, which you can find in our four major books, soon at AmericanAnswers.org Proceed with caution, for our future.

For more explanation of Bible prophecy (i.e., our certain future), please read our two books, Discern Your Future, and The Advanced Bible Prophecy Handbook.

Innovation & Politics

Schools of the future would be wise to offer internships for credit, so no one graduates with entry-level job skills, because those jobs will primarily be automated, and/or (therefore) unavailable! Even white collar skills will be needed before high school graduation. Trained and educated for jobs robots don't do, as the standard.

If every frontline job is automated, what will high school and college grads do to earn a living? I see government forcing the robot-owning businesses, and rich, to hire people, to cater to the elites' whims (butler, etc.). If they can't make money off you, or robots cost the same or less, there is NO economic reason to ever hire you!

The masses will rise up and demand government solve this problem, so one-world government will emerge. Managing robots, and advertising to consumers, and logistics management seem like realistic future jobs.

The rich will either sit on their money (i.e., no growth), or hire enough that they can profit off of. Government is sure to rise. Businesses will hire enough for them to profit off, but the rest will clamor for jobs. Violent revolts against robots could occur. If AI trends are NOT managed properly, it could end badly, as ALL is certain to end when the seven-year Israel peace deal is signed.

Prophecy

All futurist's dreams will be realized for 1,000 years, AFTER seven horrific years (Rev. 4-20). If a person never gets properly related to God, they'll not live in that 1,000 year period on earth, but go straight "downstairs." For those living at the peace deal, many will die in the next seven years, and innovation will (virtually, practically) cease for 3.5 years, just to deal with the colossal damage of the seal and trumpet judgments.

However, by mid-Tribulation, technology will have recovered significantly, as the 666 system is in place. It even reaches a zenith in commercial Babylon, uniting religion, business and government, world-wide. Revival would help, and doing the right thing, but NOTHING can stop the trend to sin increasing, and prophecy transpiring.

IF you miss the Rapture, prepare for a tough three to 3.5 years, and NEVER accept "the mark." You may be killed for refusing/resisting. You can be saved during that time, but it's MUCH harder than today. You'd have to go survivalist, and be shunned by society, and endure until Rev. 20.

The MAIN choice is do we live in light of imminent prophecy, or do we laugh it off, and continue with business as usual one day EVERYONE will see it was true and real, but that day will be too late for the majority! I suggest you live your life aware that hell and prophecy can strike YOU at any moment, and live accordingly.

Day 6
(2/2/18)

Business

SINCE it's my first day off in years, I'm going to have fun, and address innovation... one way any small town or city can get more business is take a yellow pages of a larger city,

list every business category, and assess if they have enough of every category. There is NO need to travel, to learn what you're missing—it's FREE!

EVERY town that chooses (i.e., by majority) to remain local/small/NOT as modern can at least make very cutting-edge websites, to sell things on the internet, and people may never have to know the products are sent from a small place (maybe have a P.O. box in a nearby, larger city?), as 'image' can impact sales.

Cities and states are constantly in competition to lure businesses for jobs. CA, TX and NY seem to be leading the way. If your state or city can't compete, change what's holding you back (i.e., amenities), IF you have great people/workforce, and scenery. Specifically, Amazon should pick what's BEST for their company. They hold all the cards!

SMART businesses headquarter where taxes are the lowest, the labor force is the smartest, land is cheap, labor is low, access to distributions excellent, and there's a pro-business climate in the community (and much housing available for their people). Weather is also a factor, as with the economic stability of that city, and there are NOT too many competitors.

Update (11/19/18)

The cheapest way to solve #WorldToiletDay is every village gets a back hoe'd HUGE hole, covered by wood studs, with a center hole, located within walking distance of the community. Natural substitutes for toilet paper are another matter! Ask @BillGates about that? #ReinventTheToilet

I'm feeling a little innovative, today, but only as to needs, vs. how-to's. I need a robot programmable to play catch with my dog, as she NEVER spits out the ball, so there's no game/sport. Same goes for Roomba raking my leaves, by sucking them up (off road wheeled, for rough terrain).

I 'wanna be able to be almost instantly 'teleported' to a destination, without whiplash, by some pod that flies safely within low airspace. If you watch Shark Tank, as we did last evening, you get inspired for new products (like a broom and dust catcher that worked, low to the ground).

Why can't I speak my own one-word commands to my appliances, and they obey, like 'off, NBC, NFL,' and my TV ends, or goes to channel 5, or any NFL games? Why must I punch in all the digits in my search tool? Do I look like a typist, with such big hands? If I say 'start,' why can't my car be warming up in the cold (garage door up, of course)?

The space under the cushions of a couch are a WASTE... storage possibilities! I saw, yesterday, that three-story homes are popping up at Preston and Razor (streets). Since there are NO residences, nearby, it blocks no one's view, so it's a BRILLIANT solution in land-locked venues.

In Houston, on Beltway 8, near 2/3rds of the way to the Galveston turnoff, teenagers thwarted a developer trying that, and after ~three years, he abandoned them, but he was a

FOOL to build three-story small stacked boxes right in front of established one-story homes, even though legal. Money waste!

Why can't FaceTime and Skype communicate, for people with Apple vs. Microsoft (maybe they can; they can't for this techno dinosaur, with his relatives). In-between software as a new product? Why can't a robot be programmed where every item in my casa belongs, and whenever it's left out, it retrieves them, and puts them in their place?

Could disposable guinea pig/rabbit bedding exist, which you throw out every week, to save cleaning cages? If not, why now a button to release the cedar chips into a single cup, to pour out into a trash can? Why should I ever touch a nasty toilet? SMART people added a handle/lip on the seat, at a venue I frequented, recently. It better be sterilized, too.

Why does makeup take so long to put on, for the females in my family? SAME face and steps and products, every time. Automate it! Same with some types of haircuts: Same head, same style every time! If Shark Tank is ever on DVD archives, you can get inspired!

YouTube has several of their old shows. If you want to be better at innovation, get our book, entitled, Design Your Future: Innovation Strategies for the 21st Century, or we have OVER 4,700 new product ideas strewn throughout four of our main books, at AmericanAnswers.org. #Innovation

Update (11/28/18)

Let's be completely honest... MOST jobs are mundane, and most business experiences are boring. If, as an owner/executive, you can fix THAT, you can keep valued employees and customers. It costs so much more to continually seek out new clients, as it does keeping existing ones happy! See our two books on business and innovation, for many tips.

For example, there's NOTHING more boring than car repairs. WHAT IF you were offered a man cave and/or work stations (i.e., two separate mini rooms for entertainment/news and/or to do business). Clients got a lounging recliner, maybe even a massaging one, free sodas, music headphones, and would ENJOY awaiting the repair? That's NOT very common!

Doctors over-book, because patients can be no-shows! Some doctors charge for missed appointments. A "waiting room" is so named for so being. Why not make such holding pens amazing, where people would want to come back, even if they had to wait to see what's up doc?

Dentists sometimes show videos during tooth repairs. One dentist I frequented had very cute women, and a country ambiance as his motif. It was almost like country girl Hooters, but no skimpy clothes. He had plaques of ropes, pictures of horses and cows,

and framed Indian heads. That's NOT your run-of-the-mill dentist, nor were his sales! He did WELL!

Think outside the box; Boxes, absent fancy wrappings, are BORING! The MOST boring business interiors have to be at Sears, but even more so at Office Max. So vintage 1965! Grid system, white metal racks, stacked to the hilt, high, energy-wasteful ceilings, Indiana Jones warehouse like. That DOESN'T sell well.

People want to be pampered when they spend their hard-earned cash! They work long hours, often in boring and/or repetitive jobs. Off-hours entertainment is an escape, and that's when businesses make sales to them, so give them an escape from chores, work, exercise and the general hum-drum of everyday life! Dazzle them.

I've taught my sons to be so frugal, they (mainly) eat \$1 meal burgers and fries at Wendy's, 10 chicken nuggets at Burger King, and unlimited Coke at McDonalds. When in Arkansas, recently, we found all three within walking distance, so they got FULL off a pocket full of change (~\$7).

AMC theaters now added descending rows of recliner chairs, so you never have to even sense another person above or below, as you watch. Improve your business! If you don't, and your competitors do, your only 'gonna improve your chances of not having a business anymore.

A vet we recently frequented (thrice) was AFFORDABLE! That's innovation! They took walk-ins, from 8-10am (on given days), then appointments. They worked fast, were very professional, and had so many customers! They also had a large staff. Parker Animal Clinic. Going for the masses by reasonable pricing! Use them!

IKEA used to have a maze-like pedestrian flow, that forced customers to view their inventory. People complained, and they opened up exit options, a little bit. When all you have is grid-like aisles, with NO creativity or imagination, that's been around since the 1940s! You aren't keeping up with the times!

Why can't retailers have elevated sections, and lower sections, and floor level sections, to make departments stand out and be more defined and interesting? One to two steps up or down changes the experience from run-of-the-mill to run of the litter unique. Business owners have to think more innovatively.

The Dallas Cowboys added scantily clad, but professional cheerleaders, way back when, and labeled themselves 'America's team.' Branding/marketing. Despite no Super Bowl appearance in two+ decades, people still love the team from all over America, and it may be the most financially valuable NFL team.

There's a hub cap dealer in my town, whose building is stocked full to the brim! It is Hoarders TV show on steroids, but he knows exactly where every make and model is located, and he maximizes his storefront space (sunk cost overhead). Once you get used to it, it makes a lot of sense. #Homers

Why can't bowling alleys have sections blocked off with rock and contemporary music areas, with laser lights, and MTV-like videos for Millennials, and classic rock guitars and rock star posters in the older adult sections? I NEVER bowl, but I might, if the ambiance were more alive/exciting. Dazzle/wow me.

How boring is an oil change? What if they had free coffee and/or soda, and a TV screen, where the customer saw and heard NOTHING mechanical or greasy, even using sound-proof wall insulation? If I wanted to be in a grease monkey environment, I'd try to change my oil myself!

Have you ever seen any difference between one mall and the next? I have! The Galleria Dallas, and three others in North Dallas are quite nice, but some are more trashy (Ex.: Collin Creek), and you've got to expect them to barely hold on, if not shut down, like the one near Six Flags finally did. Ambiance MUST keep up, and doesn't have to be first class.

Have you driven by DULL church buildings? Would you—all things being equal—ever step foot in there? What if their exterior architecture was exciting, interesting and aesthetic/pleasing to the eye—even cutting edge? Would that say anything about what you might find inside?

I LOVE innovation! I told myself, concerning dieting, I DON'T want to do things I won't do forever, and there are things I like, so I'm 'gonna try adding just a bit more water, a bit less food and a bit more exercise. Call it the small increments diet. I don't want to ban everything I enjoy—even if it would help.

Baylor is raising money to build a new basketball stadium. It's NOT that it is falling apart, but ambiance, to some degree, affects attendance. People like being in new, clean, modern and exciting venues! Why do you think the NFL and MLB tear down perfectly good stadiums, sometimes? It's NOT for mere functionality.

If you want some basic design training in architecture YET to be invented, get your hands on our architecture book. It won't be on Amazon, if there's a cost to put it there, as the market is much smaller. My Baylor son alerted me to this unique architectural structure: <https://bit.ly/2wCg68I>

Wouldn't you LOVE a BIG BOX store with moving walkways, like at some airports, or who offered you snap-on skates, to make your experience more fun and fast?... Lowes, Home Depot, Sam's, Wal-Mart, Costco. Keep it safe, have courtesy rules, but don't make us hike when we're Rambo shoppers!

LOOK at Dubai skyscrapers: <https://bit.ly/2BDEsmP> When I studied graduate architecture at Texas A & M, one class had us summarize every design in one word. I LOVE the "twist" building called Cayan Tower. I also studied at the University of Illinois and University of Houston. I have THOUSANDS of building design ideas.

Three-story homes are an adaptation to space limitations (i.e., landlocked). In NYC, skyscraper lofts were the same, eons ago, and to today—where space is at a premium.

Modern ecological concerns have buildings with trees and shrubs on the roof, to lessen carbon footprints.

DID YOU KNOW this building in Big D is causing neighbors many headaches, because the windows glare the sun like a magnifying glass, even hurting plants at a nearby art museum? Bad design choice, made to save energy costs: <https://bit.ly/2DQCEs5> It would take \$20 million to reface the facade to fix the problem, so it goes unfixed.

Wind problems have occurred in downtowns, where skyscrapers cause gusts, and blocked sun shadows have made other buildings remain more in the dark. That's all a matter of government city planners and architects and engineers planning a better and more beautiful future. Now let's do that in politics!

Tiny houses, off the grid living, homesteading and other innovations affect architecture and home design. Some people get FREE electricity, once they pay to tap into geothermal. Some people don't mind sticking out, with roofs full of black solar panels. Everyone wants more for less, in every area of life.

You can get inspiring architecture design ideas watching Bar Rescue and Amazing Homes TV shows. Steal an idea or two, and incorporate it in your own designs! At the U of I, I designed a glass pool imbedded in the side of a cliff, so when you dove, it looked like you were jumping off.

In graduate school, we saw a homemade of an airplane (in Lubbock, TX). Some people live in abandoned barges, or floating homes. Think differently. Be creative. LEARN what exists, and expand on ideas, for even newer ones of your own! There is an underwater hotel. Some tree houses hang as Christmas ornament balls from trees!

How could convenience stores use innovation, besides HUGE, clean bathrooms? They are usually quite boring, and one-floored, with grid aisles, and NO markings for easy access to needed items. Use color, lights, artwork, levels, curves, music. In short, better experience by better ambiance.

Aldi added a quarters slot system to solve the problem of customers leaving carts in the parking lot, and having to pay personnel to gather them up. When I campaign, I'll offer FREE business consulting to any decent business of large enough size, in areas described in my Linked-In account, hoping to earn your votes!

When I run, I'll offer FREE money-saving tips to the poor, and advice on better job acquisition and cheaper ways to live better, for less, hoping to earn your votes. If we can't help or innovate some solution or improvement, you're out nothing, but at least let me give it a try, starting in June, 2019.

I'd especially love to re-advise Fortune 2000 businesses on strategy, problem-solving, innovation, R & D, growth/expansion, employee motivation or architecture. Also, shadowing workers in their jobs, I could design products to make their work easier or go faster, or do better quality work. If I can find a good campaign manager, I'm 'gonna

insist they book me to advise Fortune 2000s for FREE, in big cities, as I speak my political ideas at night.

In any given city, I'm 'gonna ask such person to solicit any and all larger businesses to offer challenges they face, so solutions can take minimal time, so more businesses can be helped, in the shortest amount of time. Trade secrets will be kept confidential, but what we suggest one place can help elsewhere.

If any U.S. business NEEDS a never done before cutting-edge architecture design idea for their headquarters, or stores, I'd LOVE to suggest ideas of my own, or educate them on things that have been done they can replicate or alter, they might not be aware of. I'm open to any such campaign manager.

I expect five minutes maximum, per business, if they come prepared, and I get briefed on their challenge, ahead of time. For poor people, I want to educate en masse, maybe using technology, so they can learn from my books or website, perhaps sometimes helping out Habitat for Humanity, as unmechanical as I am.

Education and innovation are my fortes. I have three slogans I'll trademark when I get the funds, but rest assured I'm NOT worried competitor politicians can imitate this campaign strategy! To God be the glory for it all, as I'm as uncreative as the next doofus, without Him! I'm VERY innovative with Him, though!

Why not a glass-floored business room (skirts disallowed), like you feel walking over the Grand Canyon's lookout? Something DIFFERENT! Why not circular rooms in office buildings, and cubicles that weren't square? Why not streaming live Google video of scenery, where secretaries have NO windows?

Apple's executives thought one central bathroom could facilitate collaboration and innovation, but soon found it was detrimental to many (especially the pregnant), as you had to walk so far to do your business, and who wants to talk shop when you're answering Mother Nature's call? At least they TRIED something new; not all things succeed.

Why not have kids learn their class subjects as they walk outside, using a megaphone, so they get sun rays (vitamin A) and exercise? To be innovative, ask 'why not,' and 'what if?' Learn what's creative that has already been created, then add your own twist. I believe NO ONE can out-do Gods creativity in me.

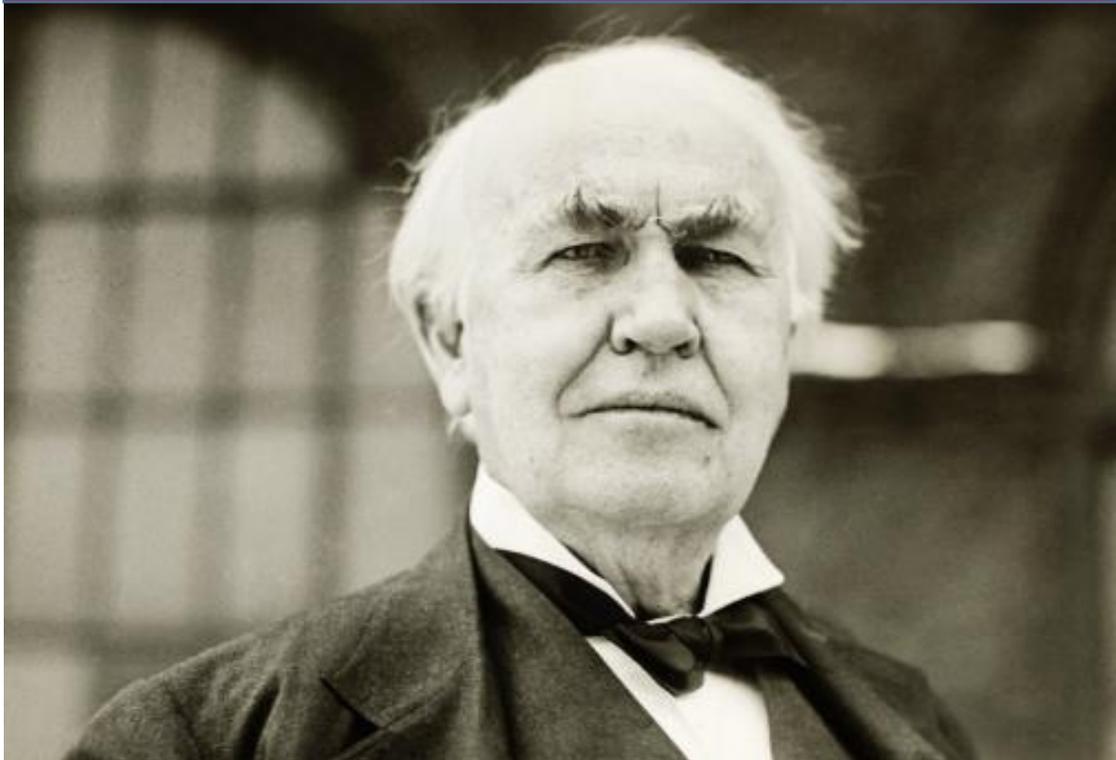

Why can't the most interesting physics teacher live stream a lecture to all public schools, to make a rather dull subject more fun for all? America needs more STEM graduates. Use the teachers who inspire such majors, and use technology to get those teachers' skills to all who need them! It may even save costs!

New changes in haircut venues: Online advanced scheduling (Great Clips), and pampered care (Sports Clips). Pharmacies seem to always have white, boring grid aisles, and more upscale, or at least variety could distinguish one of the major players. What could make groceries more exciting?

McDonald's added self-ordering kiosks. GM cut out non-selling vehicles, yesterday. Flying taxis are coming to Dallas, and in Dubai, flying motorcycles are available for ~\$250,000. Learn what's new across the world, and bring home ideas to make America better, as a result. Business and innovation intersect.

THE INNOVATOR'S BIBLE

JAMES MERONEY

The Innovator's Bible

1. INTRODUCTION (p. 26)
2. METHODOLOGY (p. 30)
3. PROBLEMS (p. 34)
4. APPLICATIONS (p. 36)
5. BUSINESS (p. 37)
6. PRODUCT CATEGORIES (p. 38)
7. INVENTIONS (*the heart of this book*)_(p. 41)
8. FUTURISTIC PRODUCTS (p. 259)
9. RESOURCES (p. 298)

1. INTRODUCTION

This book is offered as a springboard for all innovators, to stimulate expanded thinking about what could be, in almost every major category, including reminding us of some very good and standard products that already exist. America needs to again become the global center of world-class/best-in-class cutting edge innovations. –**The World’s Most Innovative Man** (yours truly)

OPEN OFFER

By God’s grace alone I believe I can invent a new product for almost every industry, improve almost every product, and fix almost every problem with a new invention, which I am open to doing (for a reasonable fee) for any business, or for any competitor to established businesses.

This offer is also expected to be done for free, as part of our political campaign, as long as it lasts.

INVENTIONS

(7/16/23; @JamesMeroney)

SINCE I’ve the experience/credentials to speak on the inventions process, with over 6,000 new product ideas documented, a book on innovation, and over 20 chapters on the subject at our website, and since I won’t give any more ideas out, for free, why not a chapter to help un-creatives?

LEARN principles to apply for your own solutions, from what I write! Every time I use my laptop, I despise burning up batteries with too much charging time, or the hurried rush when it warns me the battery is low. So I use an electric computer cord, that tangles every day. **THERE ARE THREE FIXES NEEDED!**

1. No battery prematurely aged thru over-charging
2. No last minute requirement to plug it in, or the computer will crash
3. Never tangling electrical cords Now, we all use vacuums.

Ask yourself, what did they use 100 years ago? A broom and a dustpan. Why? Houses have always had dirt and dust! Could we eliminate them having that?

I once saw a Houston house that had suction in the walls, and you inserted a hose to outlets in rooms, as your vacuum. Now days we have Roomba robots do our floor dusting. But think of its evolution: Broom to vacuum.

Dyson makes fancy vacuums. What's special about them, besides price? What are the features, benefits and disadvantages of all these ways to clean your floors? There's also a Swiffer vacuum that shoots out cleaning fluid. Why choose one over the other? What are the negatives, or "problems" with each?

Vacuums are bulky and heavy, and hard for some to carry up stairs. And there unsightly to store. Handhelds are small, lightweight and compact, but have little suction power. Robots are now trained to avoid cords on the floor. Mine NEVER gets the entire floor, as it has no idea where its been. DUMB (problem)!

Just like my laptop battery, it dies, after awhile, too. That's a problem! Start analyzing, comparing, asking questions! THIS is how you invent things that have never yet been!

Let's try several other consumer products! Air conditioners. Besides built-in ones, there are window units, swamp coolers, and room devices you add water to. WHY, and what's the difference?

I felt a small, portable one you take on walks, and it wasn't real cold, convenient or powerful. There are three fixes, already!

1. Cold
2. Compact
3. Powerful

Are you getting the idea?

Built-ins can be costlier, so how could you cool or heat a home for cheaper, or for free? List the negatives and problems with swamp coolers, window units (unsightly and limited range), and the water adding room unit (human action required, often). Invent around problems!

In many cases, you have to touch and use products, several times, to be able to invent! I am convinced God's skill within me can invent at least one product for nearly every profession. Same with improving or designing completely new products. I just need time experiencing different products and professions!

I HOPE this short (by my standards) chapter has started to help you learn how to be more creative! Sometimes, great ideas just hot you. You can't control that, or its timing! But you CAN analyze, compare and ask questions! LEARN whats already been made!

Ambition

I don't often exhibit or advocate for my Fortune 500+ business consulting skills, but I will today, as part of my campaign, I will solve 1 of 3 proffered problems/challenges they face, if able, for free. This will be both to show my being a pro-business candidate, and seeking their backing with votes from their influence, as well as starting a world-class innovation-based economy. The

areas where our services are offered include problem-solving, innovation, efficiency and productivity improvement, streamlining, advertising, growth opportunities, and architecture. As but the start of this process, I've said I believe God's gifted me with the ability to make a new product for almost every profession, to make it better for the employee, which will also make longevity and productivity improve, or at least remain constant, for less downtime and/or turnover. Let me show you what I am talking about...

Interview/observe, improvement, problem solved, variety, history, description, negatives, problems, trend, needs, improving sales, features.

2. METHODOLOGY

METHODS

APPLICATION. New uses and markets for products.

COMBINE. Combine products or functionalities.

COMPARE. Compare products & competitors (list traits, advantages and disadvantages).

DIFFERENT. Different way same do/imitate; Layman's 10 day B.B.A. (alter an idea/takeoffs), quality levels.

EXTRAPOLATION. Take it to its logical conclusion method/strategy.

GLOBAL. See other countries (cultural product and use/values search).

IMITATE. Copy an idea/make it cheaper (design around patents); \$2K Korean car. The question, how cheaply could a decent quality car be built, or how can we make a car for the masses of poor around the world likely led to this. Sci-fi movies.

IMPROVE. Increase speed or quality, easy/convenient, cheaper, more aesthetic, fancier gadgets, sturdier (quality), don't have to plug it in (cordless or solar powered), Save time, Save money, Save energy or effort, Better quality, Electrify an action; healthy, DIY/homemade; Improve old and current products.

INTERVIEW. Observe/interview/experience (feel); interview/poll, observe, interview users; ask questions, try their product or service as a layman, etc. Needs and necessities.

IRRITATIONS. Nearly everyone loves whenever irritating things are taken out of their lives.

LUXURIES. Money is no object; Luxury (Ex.: maximum features in car).

NEEDS. Fill a need or want; focus groups for future wants.

PERFECTION. Perfection: no problems and no improvements possible, by definition. Ideal future world; If alien (or native) were to return 20 years later.

PROBLEMS. Assume something's wrong or dumb about the product/design, but maybe less so on very recent models/iterations; problems; what's not perfect about a problem (What's wrong with (gloves)—lose color, wear out. Find faults to fix; Criticize to create

RESURRECT. Old school (resurrect products)

TRENDS. Trends tell where things are moving, in more than one arena (or where critical mass is coalescing in popular opinion).

1. **OBSERVE.** Watch how people do things and use products. List products' and peoples' problems.
2. **GATHER.** Brainstorm. Get a lot of ideas, and withhold judgment till later.
3. **RESEARCH.** Gather information. Search the web, patent lists and study a variety of disciplines.
4. **IMITATE.** Imitate competitors or other successful ideas. Legally adapt and make them

different.

5. **RESURRECT**. Give life to old, discarded ideas or products (or at least aspects of them).
6. **DECONSTRUCT**. Reverse engineer products to see how they were designed and built.
7. **FAIL**. Purposely do things wrong, and experiment with things. Make prototypes.
Failure *IS* an option. –**Domino's Pizza** (May 2014 ad)
8. **REBEL**. Break the rules and challenge (or suspend) assumptions.
9. **QUESTION**. Ask editorial questions, especially 'why?'
10. **TRAVEL**. Explore cultures (Ex.: trips/vacations, travel videos, public TV and cable travel shows).
11. **APPLICATIONS**. Find new uses or users for a product.
12. **COMBINE**. Combine (i.e., "piggyback" on) ideas. Connect previously unrelated things. Find meaning in random ideas. Ex.: Motorcycle and bicycle in one.
13. **IMPROVE**. Improve an existing product. Build a better mousetrap—different, fancier, faster, cheaper, etc. Probably every product can be changed and improved or enhanced.
14. **DREAM**. Envision the impossible and work backwards. Dream with a future-state, perfect World in mind (Ex.: science fiction, cartoons, movies). Ask 'what if?'
15. **WORDS**. Make a checklist of what's required for your invention. Use word lists and word associations. Re-define words, or change the name of something.
16. **PROBLEMS**. Find opportunity in problems, negatives, frustrations and boredom with status quo.
17. **CONVERSE**. Talk with experts, outsiders, and people different from yourself. Poll customer's needs, wants and frustrations.
18. **EXAGGERATE**. Find new ideas with absurd concepts brought back down to earth.
19. **TRENDS**. Find patterns, so you can anticipate what's next. Look to history and nature.
20. **EMBODY**. Imagine how others would take certain action(s). Gain a different perspective.

ADDITIONAL STRATEGIES

- ▶ **CUSTOMIZE**. I recently heard a radio show where a Valentine's gift was boxer shorts with the girlfriend's face on them. If a business can find a profitable way to not mass manufacture, the world is your oyster of potential new products!
- ▶ **INTERVIEW**. Interview employees for product (or services) ideas.
- ▶ **USE**. Use products as you would being an actual client (method for new product ideas).
- ▶ **ALIEN**. Act like an alien reporter from another planet reporting 50 years backward and forward (Ex.: I can't believe you put up with those slow laptops with soft speakers; See trends by looking back at things you've seen and witnessed/experienced).
- ▶ **HISTORY**. Teach youth brief history and make it relevant to their lives, as we've tried

to do in this book (Ex.: for inventions stimulation).

- ▶ **SERVANT**. If I had a servant method (Ex.: I wouldn't do 'so and so,' then make 'so and so' into a product; For every action of life, ask, how could I make that a product).
- ▶ **ANIMALS**. Study animals traits and their needs (for product ideas).
- ▶ **PAST**. Old school (modernize otherwise good products long since abandoned; i.e., the product, features or unused technology).
- ▶ **SMART EVERYTHING**. Make all existing products electronic, automatic or 'smart.'
- ▶ **GLOBAL COPYING**. With global competition, bring other nations' tourist attractions home (Ex.: bring London's Eye Ferris wheel to the USA).

“What if I...

Stretch it	Shrink it
Make it romantic	Make it terrifying
Combine it	Separate it
Appeal to kids	Appeal to seniors
Winterize it	Summarize it
Illuminate it	Darken it
Speed it up	Slow it down
Go clockwise	Go counterclockwise
Sharpen it	Dull it
Freeze it	Melt it
Misspell it	Spell it correctly
Sweeten it	Sour it
Balance it	Unbalance it
Tighten it	Loosen it
Force it	Relax it
Build it up	Tear it down
Tie it	Untie it
Jump over it	Go under it
Raise the price	Give it away
Put it to music	Put it in pictures
Add nostalgic appeal	Add future appeal
Make it stronger	Make it weaker
Make it portable	Make it stationary
Personalize it	Depersonalize it
Exaggerate it	Understate it
Put in sex appeal	Take out sex appeal
Make it simple	Make it complex
Fill it up	Empty it
Make it breakable	Make it unbreakable
Make it funny	Make it serious
Moisten it	Dry it
Cushion it	Prick it
Make it disposable	Make it reusable
Make it fly	Make it float
Do it backward	Do it sideways
Magnetize it	Demagnetize it
Make it invisible	Make it visible
Go forward	Go backward.” ²

What a Great Idea, pp. 96-97, by Charles ‘Chic’ Thompson (HarperPerennial: New York, N.Y.), 1992

In addition, your author suggests the following actions:

Accelerate, Adapt, Adopt, Automate, Balance, Combine, Compact, Computerize, Cushion, Darken, Demagnetize, Depersonalize, Electrify, Exaggerate, Evolve, Force, Frame, Freeze, Jump Over, Magnetize, Magnify, Maximize, Melt, Minimize, Misspell, Moisten, Motorize, Neglect, Off-load, Optimize, Organize, Oscillate, Personalize, Prick, Rearrange, Recycle, Reduce, Reform, Relax, Reverse, Separate, Sharpen, Shift, Shrink, Simplify, Slow it Down, Speed it up, Spell it Correctly, Stretch, Substitute, Summarize, Sweeten, Tear it Down, Thicken, Tie , Tighten, Transfer it (or transfer parts to or from it), Transplant, Trim, Unbalance, Understate, Untie, Widen or Winterize it.

Add Future Appeal, Add Nostalgic Appeal, Add to it, Build it up, Change its Color, Change its Quality or Cost, Change its Texture or Material, Do it Backward, Do it Sideways, Fence it in, Fill it Up, Give it a Different Color, Increase Accuracy, Increase its Comfort (or Cushiness), Increase its Quality, Eliminate its Waste (Ex.: land under power lines), Give it Away, Put it in Pictures, Put it to Music, Raise the Price, Remove it (or something from it).

Make it Absorbent, Aerodynamic, Aesthetic, Appeal to Kids, Appeal to Seniors, Best, Better Functionality or Multi-/Inter-Functionality, Breakable, Cheaper, Cleaner (Ex.: low and no maintenance houses), Complex, Convenient, Cordless, Disposable, Dry, Dull, Easier to Use or Learn, Efficient, Empty, Entertain, Ergonomic, Expandable (Ex.: RVs’ walls—apply to homes), Fancier (i.e., a luxury), Faster, Float, Flush, Fly, Funny, Germ-Free, Go Clockwise, Go Counterclockwise, Go over, Go Under, Green (i.e., ecological), Heavier, Hover or Remote Control, Ideal, Illuminate, Improved/Better, Invisible, Larger, Lighter, Looser, Microwavable, More Convenient (Ex.: fetch your newspaper tool), More Helpful, More Useful and Practical, Move, Narrow, Natural/Organic, Network-able, Non-Toxic, One-Time Solution, Partial (i.e., with omissions), Permanent, Plastic, Portable, Prettier/Sleeker, Reduce Work/Manpower, Retractable, Reusable (Ex.: disposable lamp?), Romantic, Rotate, Safer (Ex.: bikes, or at parks), Save Time and/or Money, Serious, Smaller, Smart (or Smarter), Smooth, Sour, Stationary, Stronger/Sturdier, Temporary, Terrifying, Unbreakable, Virtual, Visible, Water-Proof (Ex.: historically—watches, cameras, video cameras), Weaker or Whole, etc.

3. PROBLEMS

<u>Problem</u> (Non-exhaustive)	<u>Example solution</u> (OTC & hacks)
Aches and pains	Advil
Acne treatment	Proactiv, CeraVe
Allergies	Xyzal
Baby poop & pee	Huggies
Bad breath	Listerine, Binaca
Bee sting	https://tinyurl.com/ym643t4s
Bruises	Heat and ice cold, alternatively
Canker sores	Canker-X, Den-Tek
Constipation	Pepto Bismal, enemas, water, etc.
Curly hair	Hair straighteners and chemicals
Dirty clothes	Tide
Dirty messes	Mr. Clean
Flies in home	Irish Spring soap, bug zappers
Food storage	Ziploc; Reynold's wrap
Food trash	Glad kitchen bags
Foot care	Dr. Scholl's
Freckles	Neutrogena stubborn spots https://tinyurl.com/yc78dv3e
Freezer burn	https://tinyurl.com/mrxypch https://tinyurl.com/yts6eaw6
Fruit flies in home	Warm, diluted lemongrass oil
Germ	Lysol
Grey hair	Just for men
Hair growth	Minoxidil, Laser cap, Bosley
Heartburn	Prilosec OTC, Tums, Pepto Bismol
Hemorrhoid relief	Preparation H
Jock itch	Cruex
Morning sickness	https://tinyurl.com/ywd4jujb
Motion sickness	Dramamine
Poison Ivy	Calamine lotion
Poop	Charmin
Sore throats	Mucinex, TheraFlu
Spills	Bounty
Stains	Goo Gone; OxiClean
Sun protection	Coppertone
Sun spots	Aliver dark spot corrector cream
Toilet cleaning	Scrubbing bubbles

Quicker-Solved Challenges

Back hair; Beer belly; Black eye; Boat wrecks/sink; Carjacking; Charlie horse; Clutter picked up; Crash avoidance; Crowd safety; Dilapidated buildings; Dog wash; Drooping eye lids; Drug epidemic; Dusting; 18-wheeler flaps on side (vs. rear) for aerodynamics; Escape fires; Fat butts;

Flat boobs; Hit and runs; Jelly fish sting/bite; Long lines in check-outs; Love handles; Man boobs; No drownings or sharp bites; Pooching stomach; Self-checkout (negatives and theft means); Sideswiped and keyed vehicles; Solitary confinement needs; Sun spots; Turkey neck; Wrinkled clothes.

More Complicated Challenges

Alarm sensors for wild animals (sound or spotlight?); Anti-ballistic missile shield penetrating technology (needed, like for Israel); Apartment fires; Born with no arms; Bring heat to cool areas, and vice versa; Child and spouse abuse; Cleft pallet; Chopper and airplane crashes (identify unoccupied dwellings to fly/crash into); Dog maulings (need tech solution for prevention); Down/curb crimes; Drunk driver detector (detects smell or erratic driving a mile away); Emergency flood resistant sewer channels open; Fall in frozen ice water tool spans cracks for support (throw rope and pulls back automatically?); Fire and wildfires; Fog; Homeless (to unused and/or abandoned buildings?); Human trafficking; Hunger/starvation; Landslides/mud slides (Ex.: California); Land mines (abandoned); Lost on the wilderness; Paralysis; Prostitute needs; Protect highway workers; Railroad (Ex.: crash and derail); Sandbag filler shovel (all in one—dig and pour); Satellite tracks enriched uranium transportation?; Upskirting identifying sensor? (addition to business cameras?); Use underground, molten lava and geyser steam for heating alternative (with pipes); Wrong way drivers (explore why it happens).

MEDICAL PROBLEMS

Alzheimer's; Anxiety; Arthritis/chronic pain; Asthma; Autism; Back pain; Binge eating; Black eye; Blindness; Bone spur; Broken bones; Bruises; Bunions; Burps; Cancer; Canker sores; Cellulite; Cerebral palsy; Chafing; Chicken neck; Chickenpox; Choking; Cold sore; Colds; Coma; Constipation; Cystic fibrosis; Deafness; Dehydration; Dementia; Depression; Diabetes; Diarrhea; Dizziness/Lightheadedness; Double chin; Down's syndrome; Dumbness; Earache; Earwax build-up; Ebola virus; Eczema; Epilepsy; Erectile dysfunction/Impotence; Eye sores; Eye twitch; Fallen arches/Flat feet; Febrile seizures; Flu; Food poisoning; F-rts; Gallstones; Gout; Hearing loss; Heart attack; Heartburn; Hemorrhoids; Hiccups; High blood pressure; High cholesterol; HIV/AIDS; Indigestion; Insomnia; Kidney stones; Laryngitis; Liver disease; Loss of libido; Love handles; Lupus; Malnutrition; Man boobs; Measles; Meningitis; Menopause; Mental alertness; Migraine; Miscarriage; Mumps; Nosebleed; Obesity; Osteoporosis; Overactive thyroid; Overeating; Pink eye; Poison ivy; Polio; Polyps; Post-traumatic stress disorder/PTSD; Psoriasis; Psychosis; Rattlesnake bite; Restless legs syndrome; Ringworm; Schizophrenia; Scoliosis; Sick cell anemia; Sinusitis; Skin cancer/Melanoma; Sleepiness; Sneezes; Snoring; Sore throat; Stillbirth; Stint; Stitches; Stomach ache; Stroke; Stuttering; Sty in eye; Sudden infant death syndrome/SIDS; Suicide; Sun stroke; Sunburn; Swollen glands; Syphilis; Throwing your back out; Tonsillitis; Tooth decay; Tuberculosis/TB; Type 1 diabetes; Type 2 diabetes; Vertigo; Vomit; Warts; Water in ear; Whooping cough; Wrinkles; Yawn; Yellow fever; Zits/Acne.

4. APPLICATIONS

VENUES

Air shows; Airbnb's; Airports; Amusement parks; Apartments; Arts district; Banks; Barns; Basketball stadiums; Bed & breakfasts; Board rooms; Boats on lakes; Buses; Campaigns; Camps; Car washes; Casinos; Caves; Churches; Circuses; College life; Concerts; Convenience stores; Convention centers; Court houses; Cubicles/desks; Death row; Dorms; Drive-in theaters; Environment; Escape rooms; Fairs; Farm equipment; Flea markets; Food pantries; Game rooms; Garage sales/estate sales; Gas stations; Grocers; Headquarters; Horse stables; Hospitals; Ice rinks; Junk yards; Kindergartens; Malls; Manufacturers; Movie theaters; Museums; Oceans; Outlet malls; Parades; Parking lots; Parks; Pet hotels; Public parks; Railroad intersections; Ranches; Restrooms; Retail medical clinics; Retail offices; Rodeos; RV parks; Senior centers; Skyscrapers; Solitary confinement; Sports stadiums; Storage units/facilities; Swiss hot springs/public bathhouses; Tail gate parties; Theme parks; Universities; Vacations; Water parks; Weddings;

TASKS

Auctions; Baby delivery; Baby sleep monitor; Back scratch; Back wash; Blood donation; Car maintenance; Checking out at stores; Chinese fire drill; Clothes ironing; Clothes starch; Clubbing/bar hopping; Corn harvesting; Dog washing; Erecting a building; Evangelism/prayer/discipling; Exercises; Extracting teeth; Feed cattle/pigs; Funeral; Graduation; Home schooling; Home tree trimming; Homes from cargo containers; Horse race; Lawsuits; Leash/dog walk; Money making; New car buying tips; Pilates/Jazzercise/Jane Fonda; Plasma donations; Pro tree trimmers; Prospecting in sales; Pumpkin carving; Push-ups; Road paving; Road trips; School buses; Scrapbooking; Self haircut; Sit ups; Sleeping in an airport; Staycation; Tie a tie; Tire change; Trains and train stations; Wash car; Weather events; Wedding; Work promotion.

Gadget Guru:

Beverage warmer; Convert slides into digital (tool); Digital frame keychains; Digital photo alarm clock; Digital compass; Hi tech watches; Home TV on the road; Kindle; Lap pad for laptops; Laptop skins; Lomography; Picture taking binoculars; Pen scanner; Pocket sized digital photo holder; Relaxation sound machines; Remote control drink float (for pool); Remote control key locator; Sling box; Trunk organizers; USB roll-up drum kit; Virtual IMAX portable glasses; Voice activated grocery list maker (print out?); Waterproof shower radio; Wine bottle thermometer; Wireless headphones; Wrist mounted GPS <http://www.gifts.com/interests/gadget-guru/ohra264icp>

5. BUSINESS **(& Trends)**

Megatrends 2015-2025

Electronic dance music and rap/hip hop; Barrage of and variety of advertising means; Increased stress, anger, hate and violence; Increased nationalism; Mainly digital (vs. analog); The rich get richer; Consumers with increased options; Emphases on health, looks/aesthetics and assets/materialism; Misinformation and propaganda debunking industry; Agenda-advocating biased opinion “journalism”; Influencers and Tik Tok stars; LGBTQ and African-American rights advocacy (‘woke’); Inflation; AI, robotics and STEM skills; College costs rise as attendance wanes; Church attendance wanes, overall; Massively increased knowledge base (information overload); Social media, and fame seekers; Multi-culturalism; Flexibility and more work-life balance in jobs (self-actualization); Weather changes (severe extremes and ‘acts of God’); Business casual; Increased use of pills/drugs, and/or medical procedures; Increased crime; Reality TV much more prevalent.

CAREERS

Accountant/CPA; Actor; Actuary; Air traffic control; Anesthesiologist; Animal control; Appliance repair; Appraiser; Archaeology; Architect; Astronaut; Astronomer; Athlete; Attorney; Auto mechanic; Babysitter; Baker; Bank robber; Bank teller; Barber; Bartender; Billing; Boat captain; Brick layer; Bus driver; Bus tables; Butcher; Car dealer; Car designer; Care giver; Carpenter; Carper installer; Carpet cleaner; Cashiers; Cement truck; CEO; Childcare; Chiropractor; Choreographer; Coach; Coder; Comedian; Construction worker; Cook/chef; Counselor; Courier; Court reporter; Crossing guard; Dancer; Dating/match maker; Day trader; Daycare; Daycare/nanny; Dentist; Dish washer; Dispatcher; Ditch digger; Diver; Doctor; Dog walker; Draftsmen; Drain cleaner; Dredging; Drug dealer; Editor; 18 wheeler driver; Electrician; EMS personnel; Engineer; Eye doctor; Farmer; Fast food worker; Fence erector; Film director; Firefighter; Fisherman; Flight attendant; Florist; Forester; Grocery worker; Hacker; Health inspector; Helicopter pilot; Highway worker; Hole digger; Home builder; Insurance agent; Investor; Jailer; Janitor; Jeweler; Judge; Law clerk; Law maker; Lawn maintenance crew; Lawyer; Librarian; Lifeguard; Loan officer; Locksmith; Loggers; Lumberjack; Maid; Manager; Marketing; Mechanic; Midwife; Military; Miner; Model; Mover; Musician; News anchor; Nuclear plants worker; Nurse practitioner; Nurse; OB/GYN; Oil drilling; Painter; Paper boy; Park ranger; Pastor; Personal trainer; Pest control; Pet poop clean up; Pharmacy; Phlebotomist; Photographer; Physical therapy; Pilot; Plasterer; Plumber; Poet; Police person; Private detective; Prostitute; Psychiatrist; Psychologist; Radio DJ; Rancher; Real estate agent; Repo man; Reporter; Restaurateur; Retail; Roofer; School administrator; Science researcher; Sculptor; Secretary; Security; Security guard; Set designer; Sewer worker/cleaner; Sheet rocker; Short selling; Shuttle driver; Slaughter house; Social worker; Soldier; Special forces; Special needs educator; Spotter; Stock broker; Stripper; Student; Surgeon; Surveyor; Tailor/seamstress; Tax preparer; Taxi driver; Teacher; Tile layer; Tiler; Tire repair; Tour guide; Traffic control; Trainer; Trash truck worker; Travel agent; Tree trimmer; Tutors; TV camera operator; TV/movie producer; Umpire; Usher; USPS mail person; Vet; Video game designer; Waiter; Waiter/waitress; Waste management; Weathercaster; Web design; Weight lifter; Welder; Window washer; Writer; Zookeeper.

6. PRODUCT CATEGORIES

Accessories for other products, ADA needs, addictions, airports, all hobbies, all jobs' needs, all Olympic sports, Allen wrenches, America's got talent participants tours, like American Idol does), amusement parks, anti-gravity products, anything can be deep fried at the Texas State Fair, architect tools, architecture, aromas and fragrances, at work products, attorney needs, auto and travel, auto mechanics, automate all manual work tasks, baby products, banks, barbed wire styles, bartender tools (including automatic mixer machines), beach products, below-ocean living, best-seller book categories for deviation topic (more in-depth, opposite, new application, variation, etc.), better fireplace tools (all in one tool?; aesthetics), biking, birds, board games, body guards, bowling alleys, brick layers, building materials (new uses), business meeting presentations, buses (sterilize), calamities, camping/camps (A/C, TV, tubs), candies, capture wind for power at home (car ever possible?; store up self-generated energy—private car shapes, careers/custom work places (know their business), carpentry tools, cars (Ex.: shapes of), cars/transportation, cashiers, change the weather (or it's effects), caving, changed laws (Ex.: ADA, pollution standards), checking out at stores, childcare, climbing, clothing (see trends in each category, then imagine), coaches, college life, colors (i.e., combinations), combination ingredients cereals, combine technologies (trend), comet-shaped indentions in skyscrapers, and slide twists down its side in a swirl (architecture), construction workers, cooking/grilling, cops, court reporters, CPA needs, crime (prevention—Ex.: DUI, child/wife abuse; Ex.: down hostage taking), culture (Ex.: newspaper, TV), daycares, dentists, detect terrorist technology (dogs sniff, scanner/sensor—all of which tools are thwarted with power outages), different languages, diseases as problems, disintegrating products (Ex.: Frito Lay too noisy bag), ditch diggers, doctors, dog types (unique needs), dog walkers, down natural disasters (with technology), education products (virtual classroom classes at home?), elderly (U.S. population growing older; better comforting products—see needs; increase hearing and sight products for the elderly), electrical/high tech products, electronics, Engines of our Ingenuity (University of Houston radio show), entertainment, environment, every work tool a power tool (Ex.: scissors last year), exercise at work, exercise equipment, eyelids, man boobs), fair/carnival rides, farmers, feeders (Ex.: birds), find trend in best selling children's books of all times (characters and story lines—modernize and make flashier; Ex.: Cat in the Hat-like rhymes or rap), fire fighters, fishermen needs, fishing, fitness, flag waving, floating/swimming, florists, food (Ex.: salads, potatoes, Graham Crackers; combine foods (Ex.: white chocolate Darby pie; baklava pecan pie, baklava Blue Bell ice cream), furniture, game theory, games, gardening tools (are there any saws not electric?), Google's art history of name recreations, government needs, gravestone shapes, Great Wolf Lodge (get the feeling you're somewhere else, without the travel and expense; Cf.: Vegas hotels—Eiffel Tower), grocery shopping, gum flavors, gun improvements (i.e., sometimes you have to try a product and research it/ask users questions before improvement ideas will come), gymnastics, gyms, handicapped/ADA needs, hardware, health and beauty, healthy cigarettes, help for floating/swimming, high tech, hiking, hobbies, hole puncher (paper), home and garden, home entertainment, home furniture, home improvement, home schooling, home security, homebuilders, homes, home Improvement products (Lowe's and Home Depot search), home of the future (pay off house cost with tours and book; Cf.: Habitat for Humanity idea), home sprinkler systems above any fire start possible (save appliances from water damage), house amenities, house/kitchen appliances, human body (needs

and parts shapes), hunter needs, hunting, ice cream, ice fishing, ideal home (list products needed), illness/disease, immigration (tools to defend our borders), inventions for cars, jailers, jewelry and watches, job searches, job skills, joke books, judges, kitchen appliances/utensils, kitchen cooking and food prep needs (in an ideal world—list utensils and bake ware, ladders, landscaping, lawn and garden equipment, lawn mower professionals' needs, leisure activities and products, librarians, lifeguards, list all weight lifting and exercise equipment for improvements, combos or cross function or new need (Ex.: fat butts, love handles, pooching stomach, flat boobs, turkey neck, drooping lids and looks), logos, looks/appearances (Ex.: grey hair), luggage, lumberjacks, machines for the general public, maid tools, mailboxes, major appliances, managers, marriage products, materials (Ex.: new uses for fur or leaves, shark teeth), McDonald's (fast food needs), medical devices, memorabilia, midwives, military (Ex: marines), military weapons, modernize yard tools, modernize classic toys (not just by motorizing them), mountain climbing, movie theaters, movies (new subjects for Hollywood), music (Ex.: farm out my 6 cassettes), musical instruments (and combinations), national flags, natural disasters, new businesses spin off from new ideas and inventions (vs. old only; office products, old can be revised and changed), new circus acts (Ringling Brothers or Cirque, or lesser knowns, and/or have a traveling circus for new extreme sports (Ex.: shark swimming and skiing/pulling), new skills or sports for Wii (combine with suit that forces right body movement?), new transformers—modern objects and people, nurses, ocean toys, non-standard art patterns available for Twitter backgrounds, office products, office, outdoors/wilderness sports, paints and painting (i.e., painters), paper boys, parking lots, pasture, personal care/hygiene, personal trainers, pet supplies, pets (and pet supplies), pilots, planets/astronomy (planet habitation?), plant/shrubbery products, police tool, politics, pollution, Post Office (board game), post office, postman, pottery and glass, poverty, prepared foods, preventive maintenance, private detectives, private schools, problems solved, product preservatives (Ex.: CD scratches), public parks and child swing set areas, public transportation (E.: Metro train), real estate agents, recycling and green/ecological products, recycling business, religion, rock pile building, roofers, rope knots, safety rescue and protection equipment, safety, schools, school buses (seat belts being considered), secretaries, security, sex (category), sicknesses, sleep and education categories, soldiers, songs, specialty services, sporting goods, sports (Ex.: bowling, water skiing—new rules?), sports memorabilia, sports (use muscles differently, and more muscles), state fairs/6 flags/Water world, stereos and entertainment (DVD/movies, karaoke), stewardess, storage, study adult toys to get new ideas (Cf.: sex moves for marriage context?; Christian teaching tools exist?), swimming, tail gate parties, tall peoples' needs, taxes, taxi drivers, teachers, technology, tennis and tennis courts (auto ball gatherer, Cyclopes exists—improve?), tents, tilers, tools (Ex.: garden, carpentry), tools to reduce crimes, Top 100 products of all times TV show, tourism, toys, traffic problems, trains and train stations, transportation, travel (faster, cheaper, safer), travel, trees and shrubbery, tree trimming, TV (Ex.: 3-D), TV shows, universal aftermarket products (Ex.: garage door opener), use of electric street signs (and shapes), vacations, vets, video games (Ex.: dog the bounty hunter, ice road truckers, I-Carly, most dangerous roads), vitamin pills, waiters, waitresses, waste management, water (new uses and new ways to conserve), water polo, weather (down floods, hurricanes, tsunamis—at least detect early to warn), weight lifting equipment, weight loss products, wheel chairs (interview users for ideas), windmill—energizes electric car; Ex.: each house a self-contained unit), X-Games sports events, work activities, zookeepers.

SPORTS

Archery; Ax throwing; Badminton; Basketball; Bench press; Big air; BMX; Bobsleigh; Bowling; Boxing; Canoeing; Cars climb rocks; Cartwheel; Chokehold; Crab walk; Cricket; CrossFit; Curls; Dead lift; Diving; Dumb bells; Elliptical; Equestrian; Exercise ball; Fast walking; Fencing; Figure skating; Fish with hands; Foosball; Football; Freestyle skiing; Gyms; Handball; Handstand; Headlock; Hockey; Horseback riding; Hunting; Ice hockey; Juggling; Karate; Kayaking; Kite surfing; Log rolling; Luge; Medicine ball; Motocross; Mudding; Ping pong; Powerball; Pull-ups; Punching bag; Rafts; Racquetball; Repelling; Resistance bands; Rowing; Rugby; Scuba diving; Skeet shooting; Ski jumping; Skim board; Sled dog racing; Snorkeling; Somersault; Spike ball; Squats; Surfing; Swim; Swimming; Table ice hockey; Tap out; Tennis; Track and field; Triathlon; Volleyball; Wakeboard; Water polo; Water skiing; Weightlifting; Yoga.

7. INVENTIONS

Products

Aerosol sprays

Comments: Environmental factors were considered, by government regulations, in the chemicals used (i.e., ozone impact). Now, we have more pump sprays.

After burners

Comments: We need emergency situation functionality beyond automobile overdrive, when quickly speeding away from danger or a certain crash is needed.

Air bags

Comments: Just one example of how laws can incentivize or advance innovations. Of course, had the technology not existed, even in an infantile state, those laws wouldn't have been passed. They should never injure a passenger, from being too powerful when they blow up (can break bones and bruise).

Air boats

Comments: We need these moveable from water and wetlands to land, especially for authorities chasing drug lords and others.

Air compressors

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Air conditioning (outdoor A/C)

Air fryers

Air guns

Comments: They need all functionalities and amenities of the most sophisticated guns.
<https://tinyurl.com/bdhpsus4>

Air mattresses

Comments: These need conformity to body shapes capability, and not to be so boxy/rectangular (as humans aren't shaped square). Quick blow-up machines should accompany these.

Airplane hangers

Comments: These, often, need more sophistication than Gomer Pyle building shapes and doors. The product (planes) is sophisticated; why is its home so often not?

Airplanes (See also: Gliders, Harriers)

Comments:

- Planes need safe landing cushions in emergencies, or emergency jet propulsion below craft, or parachutes, to slow the fall.
- There needs to be an app that shows all safe emergency landing places in the area.
- Helicopters need air or firm bean bag-like object that ejects from their floor, to land on (or a parachute).
- Bird deflectors are needed on airline engines and windshields.

<https://tinyurl.com/5e55jfu5>

Alarm clocks

Comments: These need to be customizable to preferred voices, varying radio stations or genres, multiple times.

Alcoholic drinks (See: Mixed drinks and Beverages; See also: Brewers)

Alexa

Comments: She should be able to memorize your vocal commands and voice, so set commands can be customized to one's personal vocabulary.

All passwords collectors

Allen wrenches

Alley trash cans

Comments: These should be automated and remote controllable, especially on rainy or wintery days.

Amazon.com

Ambulances

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Amplifiers

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics, more power and smaller sized).

Amusement park rides

Comments: Make roller coasters go under water (or sprays). Oklahoma and Frisco, TX are now getting smaller version Disney-like parks. Anywhere users can gather from nearby states, new opportunities exist.

Ankle weights (See also: Weighted vest)

Comments: These should be able to be slipped on, over foot. A chest vest version would be unique.

Answering machines

Comments: Why not have celebrity cameo greetings?

Ant killers

Comments: Like every pest product (roaches, flies, etc.) , these must also all be pet-friendly, as pets can be curious (if not as much wise).

Anti-gravity pens

Anti-rusting coating

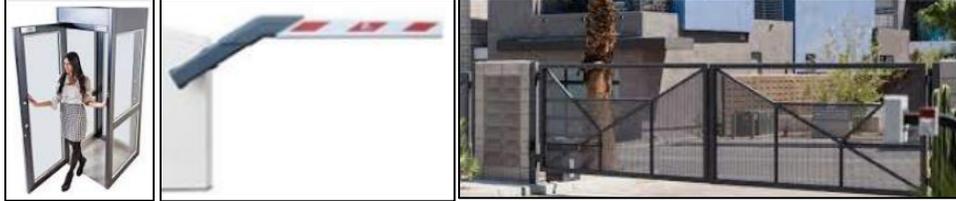

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Anti-virus software

Comments: Using them, or interviewing users would show me their new needs (besides zero firewall penetration possibilities).

Apartments

Comments: Secure access gates must be invented that disallow any but one car at a time access, or all security for these communities is potentially annulled.

<https://tinyurl.com/3pe7aksw>

Apple watches (See also: Wrist watches)

Comments: These should detect many medical statistics (if they don't, already); not mainly heart rate and time/stop watch.

Aprons

Comments: These should be grease-proof, and have handy pockets for outdoor grill tools.

Aquarium restaurant

Comments: Like this Houston TX restaurant, many new restaurants need an underwater vibe/ambiance (especially in states not near major watering holes).

Aquatic stationary bike

Architecture (See also: Bridges, Buildings, and our sections on Architecture)

Comments: We need half-glass mountainside pool, basements allowed in Texas (no water leak–how? And there should be an over a cliff clear glass shower (safely).

Area rugs

Comments: These should not be just rectangle or circle shaped (like customized, unique and area-based shapes and designs), and should vary textures.

Artificial grass

Comments: Make it more realistic (vs. AstroTurf looking).

AstroTurf (See: Artificial grass)

ATM machines

Comments: They need to be the right height for all vehicles and height of drivers, accessible through windows (i.e., adjustable). Speak-to technology would also be valuable.

Atomic-level manufacturing

Attic fans

Comments: Interviewing users would show me their new needs (besides aesthetics).

Attic organizers

Autofocus

Comments: This feature on cameras needs to be applied to binoculars, telescopes, and other things.

Automatic deposits

Automobiles (See: Cars)

Automobile grills

Comments: An example of more crashworthiness/safety, now applied to private vehicles. Bring the best of the commercial to the residential arena.

Autopilot

Autotune

Awnings

Comments: These need to be not only retractable, but also adjustable, to deflect rain or sunlight, and undamaged by hail.

Backgammon (See also: Board games)

Baseball caps (See: Ball caps)

Babies (See also: Changing tables, Diapers, Diaper bags, Diaper disposal, High chairs, Pacifiers, etc.)

Comments: This category could benefit from the following innovations:

- Software to predict your baby's looks.
- Portable changing tables (for travel).
- High chairs that can't tip over (i.e., weighted bottoms).
- Baby pillow plays lullabies for 30 minutes upon squeezing button inside, or merely laying down.
- Custom baby mobiles of family member faces and/or bodies. Also records their voices?
- Self-turning off lullaby machines.

Baby bathtubs

Comments: These need no-drowning capabilities, as with any distracted parents.

rb.gy/8ipiy

rb.gy/8kgqz

Baby beds

Comments: We need a pillow that senses, then gently pushes baby's head sideways to avoid SIDS or suffocation.

rb.gy/jrqmf

Baby bottles

Comments: these need to be self-propping (secured by neck straps?), so busy parents can multi-task.

rb.gy/5t67d

Baby bouncers

Comments: Put wheels on them, or a seat belt? Interviewing users would show me their new needs (besides aesthetics).

Baby changing tables (See: Changing tables)

Baby tubs (See: Baby bathtubs)

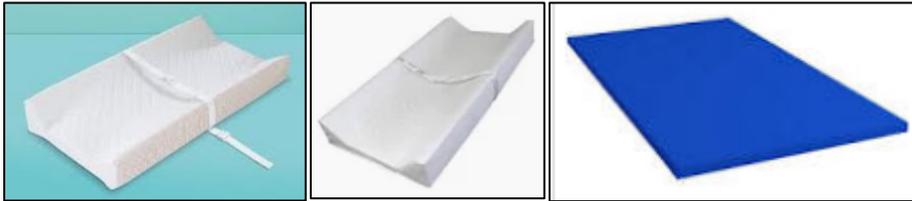

Baby carriers

Comments: It is offensive to me why anyone ever designs products to harm people's muscles or posture! WHY can't we design in balance, where the shoulder and back pull of a baby in front (or in back) is counter-balanced? (Ex.: papoose; equalize the weight on back and front; less shoulder pain with cushions; need back weights for balance).

rb.gy/unvaz

Baby changing pads

Comments: These need to not deteriorate, after many washes. Interviewing users would show me their new needs (besides aesthetics).

rb.gy/nk65s

Baby changing tables

Comments: These need to be self-cleaning, and often need to be portable. Interviewing users would show me their new needs (besides aesthetics).

rb.gy/jf0l2

Baby cribs (See: Baby beds)

Baby monitors

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Baby safety gates

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

rb.gy/d3e0z

Baby strollers (See: Strollers)

Baby walkers

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

rb.gy/y6imz

Back braces

Back rollers

Comments: Some may need to be firmer, as they can change shape with wear; possibly adjustable firmness. Mine pulls out into a smaller version (i.e., sizeable). They come in various colors. They ought to reflect the natural shape of the human back, for best resistance capability.

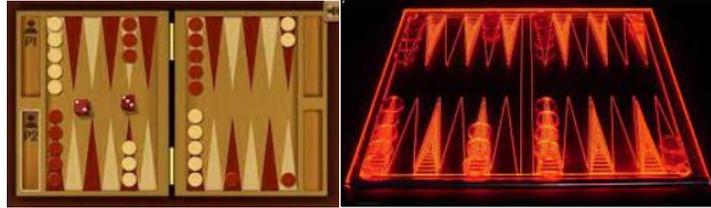

<https://tinyurl.com/yyczvkh9>

Back sun tan applier

Comments: The great difficulty is doing it yourself, based on where it's located. We need a selfie stick applicator, or wall-mounted voice-activated sprayer. This back applicator is extremely bulky and impractical, and has low sales potential, to me, with such seldom use/need.

Backgammon

Comments: Add new rules?; utilize four players? Speak to and pieces move; think where they move and they move, later (i.e., high tech brain connect).

Backpacks (See also: Comments on Baby carriers, Fanny packs)

Comments: The weight should be equally distributed, front and back. Schools should have see-through/clear ones, to guard against guns. The straps should be designed not to indent one's shoulders.

Baggies

Bags

Ball caps

Comments:

- These need to be non-sweat absorbing (no bleed through or color fading), or the front flap adjusts to the sun's direction (neck coverage).
- We need computerized, customizable designs/style, with variant materials (where any pattern is possible). Must that be pricey?
- Caps need a flat, huge bill, all around areas exposed to the sun rays.

Band-Aids

Comments: Make them for all colors of skin, including customizable to individuals' exact skin tone. Also allow any and all patterns, including homemade/unique ones (perhaps printed at home). Shapes should have variety, and not mainly be rectangular. Add some style to the more mundane!

Banners (See also: Billboards and advertising)

Comments: Bigger flag structures; stiff right angle for no waving flag; customizable; colors. Retractable banner (flag)

Bar code scanners

Comments: These machines should be 3-D, or holographic/Lasered, where any bar code can be detected, no matter how a consumer is holding their product in self-checkout lines.

Bar codes

Baseball (See also: MLB & Baseball caps)

Comments: Consider larger baseball gloves, which are more agile, flexible, sensitive, yet feeling less pain upon ball absorption. More action in the game could come with one less fielder, shorter distances between bases, or two batters and pitchers operating at once, somehow.

Bath tubs

Comments:

- Consider slanted bottoms/floors toward the drain, cushioned floors and back (perhaps reclinable, like car seats, for laying back further), built-in jets, lower heighted walls, etc.
- There needs to be a tub drain digger outer (shorter than a snake, and for home use, like having a toilet plunger)

<https://tinyurl.com/bdd9br47>

rb.gy/3evuo

Bathrooms (See also: Water faucets, Toilets, Bath tubs)

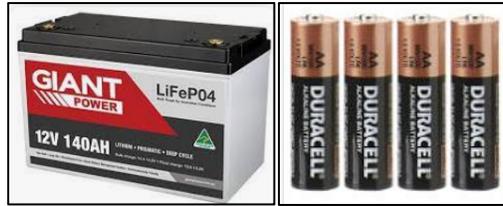

Comments: This category could be enhanced by the following innovations:

- Sensored bathroom appliances.
- Bath tubs with a radically fast drain button, and automatic flush button (for drain clogs).
- Tubs customized heat and water pressure setter (Cf.: Cadillac technology).
- Vibrating, massaging tub (and/or toilet).
- Shower sprays all 4 sides, and from above.
- Back cleaner in shower/tub.
- Body blow dryers (vs. just towels).
- Tub self-cleaner/scrubber and rinser.
- Automatic toilet paper dispenser, for commercial and residential use.
- No black mark rubber toilet plungers.
- Sanitized public restroom door handles and toilet seats.

- Anti-spray urinal and toilet (pee into a tube shaped like a golf club tunnel, for commercial use, especially).

Batteries

Comments: As with most products, capacity can always be increased, even as size becomes smaller. Self-generating and renewing batteries would be nice, as with extended life batteries, and warnings when they are draining low. Using them, or interviewing users would show me their new needs (besides aesthetics).

Battery chargers

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

BB Guns

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). Obviously, they could use sites or built-in binoculars, and Laser pointers; possibly rapid fire capability.

rb.gy/91lgd

BBQ grills (See: Outdoor grills)

Beach houses

Comments: Resistance to weather, especially salt water and erosion, is a must, as well as physical protections against hurricane wind forces. All the needs of normal houses apply to beach houses.

Beach products (See also: Ocean products)

Comments:

- We need beach fans (portable, battery-powered and powerful).
- We need wind-resistant beach umbrellas.
- There could be a new sun hat for the beach (where the rim spins around where the sun goes, or whenever you change directions/movement, it automatically adjusts).
- A retractable, shifting beach tent roof could shift with the sun (so there's always shade).
- A clear bubble with cushioned seats, to float in the ocean (beach ball beach bobber), with paddles and rudder, is needed

<https://tinyurl.com/2jffk5mz>

<https://tinyurl.com/mprmft5e>

<https://tinyurl.com/3dawvaky>

Beach tents & canopies (See: Beach products)

Beauty pageants

Comments: Have these for boys or men?

Bedrooms (See also: Beds, Bedding, Furniture, Sheets, Closets)

Comments: Moon roof ceiling or Plexiglas roof or clear shingled roofs.

Beds

Comments: Heated and air conditioned dual sides, as with adjustable pressure on backs and pressure points of the body are needed. Air currents causing a sense of floating is needed, so you really feel like you're sleeping on feathers. The space underneath is usually wasted storage area, hardly accessible. Beds may need to be raisable and lowerable, as well.

<https://tinyurl.com/ykhh2e9z>

rb.gy/emn4w

Bedding/Bedspreads

Comments: We need cooling sheets, like we have heating blankets.

Bell bottoms

Comments: These are examples that fashion can come in circles. Modernization would be in order, like more style, ridges, man-made wrinkles/pleats, etc.

Belts

Comments: We need snap-on or clip on types. Belts need to be much easier slipped through pant openings, and more stylish.

Bibles

Comments: New Bible covers are needed? Easier access to individual books, by tabs or indentions (indentions already exist).

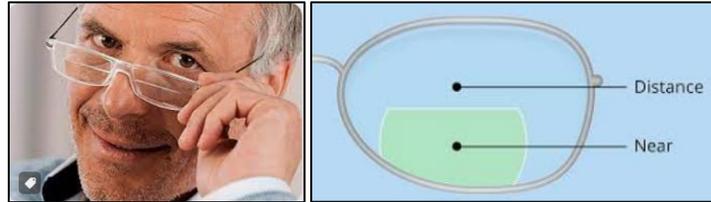

Bibs

Comments: Interviewing users would show me their new needs (besides aesthetics). They should be plastic, vs. cloth (that absorbs stains), and not be able to allow food to spill on a baby's lap. Can their arms and shoulders also take on messes, with messy eaters?

Bicycles (See: Bikes)

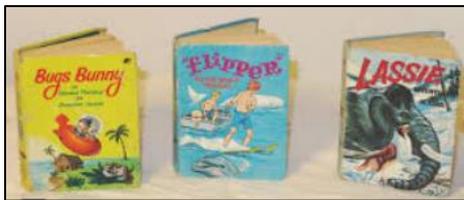

Bifocals

Comments: Get rid of the line(s), and make them as fashionable as normal glasses (already done?).

Bicycles (See also: Aquatic stationary bike)

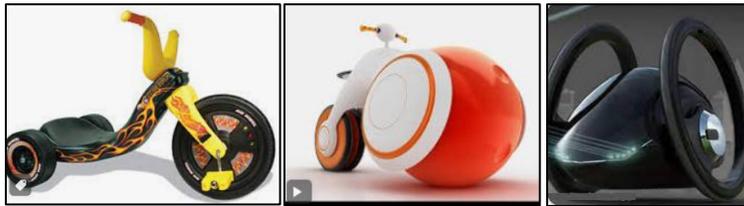

Big Little books

Comments: New, more modern versions would sell? E-book versions?

Big rigs (See: 18-wheelers)

Big Wheels

Comments: Put the small wheel in the front to be different; small wheels swivel?

Bike helmets

Comments: These need to be both more light weight, yet more like concussion-proof football helmets, and have better/more modern or futuristic style/looks.

Bike locks

Comments: These should be made of materials that hack saws cannot sever, and could have an internal alarm, that sets off on a cell phone, if ever tampered with (like Ring doorbells)

rb.gy/rd7qv

Bike pumps

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). As always, faster, more powerful and smaller are always great improvements.

Bike carriers

Comments: These need to be less bulky (lay bikes down on the car roof?).

rb.gy/17jgh

Bike races

Bike trailers & racks

Comments: These are often clunky/awkward, vs. aerodynamic and sleek. That's usually a problem, in design.

rb.gy/kxgc2

<https://tinyurl.com/bf9zhrx4>

Bikes (See also: Floating bikes, Folding bikes, Motorcycles and Ocean bike)

Comments: This category could be enhanced by the following innovations:

- Massaging and heated (or cooled) bike seats.
- Automatically adjustable bike seat.
- Multi-gear bikes (with shock absorbers), automatically shifting gears, as needed.
- Use arms to pump bike (Cf.: bike stair stepper).
- Air conditioned bubble roll cage for bikes (Ezekiel shape).
- No flat tire bikes.
- Bikes safe from slipping on water.
- Bike creates cooling electricity
- Use body leaning forward weight inertia for bike momentum.; fully leaning forward bike seat (sit on your chest?; use weight and gravity).
- A wiggle bike.
- Electric, chainless digital bikes.

rb.gy/aknr5

Bikinis

Comments: Skin colored? Artists can design many new styles.

<https://tinyurl.com/yck6hcbk>

Billboards & advertising

Comments: These are now electronic; some need more high-definition, vs. being pixilated). There can be tall or double decker. Vary billboard shapes, as they are to be designed to get attention.

Binoculars

Comments: These need auto-focus? They need to be smaller, sleeker, and more stylish.
rb.gy/xuslw

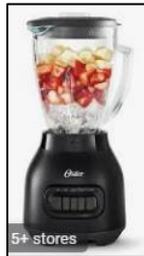

Black lights

Comments: Are there new uses for these? Interviewing users would show me their new needs (besides aesthetics).

Blackberry

Comments: Are there new uses for these? Interviewing users would show me their new needs (besides aesthetics).

Blenders

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). Non-breakable glass and injury-proof blades (automatic shut-off) would be good improvements.

Blindness (See also: Deafness)

Comments:

- The visually impaired need a talking GPS cane (or on their neck tool).
 - They need Braille products that speak (may already have this).
- <https://tinyurl.com/2he73sue>
<https://www.trendhunter.com/slideshow/aids-for-the-visually-impaired>

Blood pressure monitors

Comments: These need to be self-checkable, and not require another administering person.

Blow dryers

Comments: As always, more with less, meaning smaller, but more powerful (including straightening and curling features). Modernizing looks always help (aesthetics).

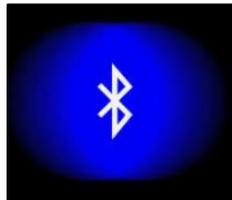

rb.gy/l0prc

Blue man group (See also: Evel Knievel, Globetrotters)

Comments: Why couldn't some creative artists, with completely different skills or sets, start a red, green or yellow man (or woman) group?

Blue tooth

Comments: As I have never used this technology, interviewing users would show me their new needs and/or uses (besides aesthetics).

Bidets

Comments: Combine/dual use with normal toilets.

rb.gy/d4qhk

Board games

Comments:

- Designers need to modernize such board games as Sorry, Password, Yahtzee, Twister, Concentration, Risk, Pictionary, Whatzit, Trivial Pursuit games for generations XYZ, so they don't become bored games.

<https://tinyurl.com/3j4b7wwk>

<https://tinyurl.com/2s329sca>

Boardless skateboard

Boats (See also: Air boats, Bus turns onto a boat, Container ships, Cruise ships, Fishing boats, Floating cars)

Comments: Make boats unsinkable. Boat/yacht floors should adjust to rocking's average tilts to stay more level (gyros vs. sea sickness).

rb.gy/7x3z5

Body shots

Body waxing & lasering

Comments: Need tools and mirrors for home use/self-help Brazilian, manicured genitals, lawnscapeing, etc., for (younger?) people so inclined.

Books (See also: Big little books, E-book readers)

Comments:

- We need a book reading tool that speaks words scanned or by it (or Braille-felt fingers), like E-books, Kindle, and/or Audible, for audible readings.
- For writing new books, go to a book store's best sellers, find a niche, and see what hasn't been covered.

Boom boxes

Comments: Is there any reason for these to resurrect, in public areas?

Boomerangs

Comments: Change their shape, so you can alter/change their flight.

Booster seats (See: High chairs)

Bottles

Bottled water

Comments: This is an example of nature being turned into profit, with bottles and healthier additives. Flavoring and healthier ingredients are how many distinguish themselves.

Bowling

Comments: Clear bowling balls? Make the sport more interesting and challenging. Make a dip or bump, down the lanes?

Boxers & briefs

Comments: Make a combination of cup support, but boxers everywhere else? Focus groups could identify further needs or improvements.

Bras

Comments: We need natural, and customized shapes; less shoulder indentation, more comfort, lightweight and natural, yet supportive, with no lines seen through clothes.
rb.gy/nwkig

Braces

Comments: Braces include for knee, ankle and wrist. They are becoming less ugly (more stylish) and cumbersome, yet still effective.

Braless

Branding irons

Bread makers & slicers

Comments: Why can't these machines adjust and allow varying shapes and sizes (and slice thicknesses)? They have to allow very quick prep time, as people don't have time for making bread like perhaps they did in the 1980's.

rb.gy/87uwr

rb.gy/6rd9l

Breast pumps

Comments: Interviewing users would show me their new needs (besides aesthetics).

Brewers

Comments: Observing them, or interviewing users would show me their new needs (besides aesthetics).

Bricks

Comments: Interviewing users would show me their new needs (besides aesthetics).

Bridges

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). Greater creativity in design, flexibility and durability are always good improvements.

Broadway

Comments: New plays and box office hits are coming. Who will come up with those ideas?

Brooms

Comments: We need automated sweeping, like bird wings, and the ability for it to scoop the residue into a dust pan (i.e., no human interaction).

rb.gy/ypgqo

Brushes (See: Hair brushes)

Buckets/pales

Comments: These need cushioned handles, and more style.

Bucket trucks

Comments: These need sensor alarms when approaching obstacles, like electrical lines, and should not be able to be fallen out of.

Bug zappers

Comments: More recently, light is replacing electrical shocks. Perhaps smells will, too. Fruit flies are too small for bug zappers to work.

Buildings (See also: Office buildings, and our Architecture section)

Comments: (Ex.: Sports stadium roofs retract). Every functional edifice needs some architectural element, or more, to give them uniqueness and some style.

Bull dozers

Comments: This shoving machine needs a camera to show what's in front of it.

Bungee jumping

Comments: Wouldn't a back-up, second safety cord be wise, with the same risk, but less legal liability?

Buoys

Comments: These need to be water resistant (i.e., so they can't deteriorate, or grow mold). These can drift, lose/chip paint, rust (i.e., problems to fix).

Bus turns into a boat

Comments: Ice Road truckers could use this, as ice melts. Rare is there a need to go across water, after driving on concrete/land. These are more for entertainment. Even cars that turn into boats are more recreational.

Bushes

Comments: Trimmers can make these into designs; scientists can make them cross-bred.
rb.gy/u9foo

Buttons

Comments: Finger touch (or sensed) should release them.

Buzz saws

Comments: A sensor should detect and prevent fingers being in danger, and shut off.

Cabinets (See: Kitchen cabinets)

Cabins

Comments: Some of these need to be retractable or collapsible, for lower off-season costs.

rb.gy/ezsog

<https://tinyurl.com/ycxr3tu3>

Cable TV

Comments: What are the advantages and disadvantages of other options/alternatives?
Interviewing experts could uncover needed future innovations.

Cake pans

Calculators

Comments: Apart from college, and a few other venues, with smart phones, Google and Alexa, these machines are often seen as out-of-date. They need to be speak-to enabled, and their aesthetics modernized significantly.

Camcorders

Comments: Stream these to smart phones? Do they have superior ability to capture images than cell phones?

Cameras (See: Digital cameras)

Campers (See also: RV's)

Comments: These need all the creature comforts of home (including A/C and heat). Interviewing users could uncover new, needed innovations.

rb.gy/t0hj4

Camping (See also: Canoes, Flashlights, Floating tent, Kayaks)

Comments: This category could be enhanced by the following innovations:

- Canopy bug screen.
- Rain-proof tent.
- Steve Fossit flag identified in woods (sound, site, smell?).
- Portable battery powered camping fan, and/or heater or air conditioner.
- Battery-powered microwave.
- Portable, battery-powered TV (for glamping).

<https://tinyurl.com/5fssmeb9>

<https://tinyurl.com/mr22bspv>

Can openers

Comments: These are manual and electric; they need to be more automated, and have a sleeker design/look).

<https://tinyurl.com/mrxuhuke>

Candles

Comments: These need to be self-monitoring, and/or self-extinguishing.

Candy

Comments: Combinations of a few existing flavors and textures would be an innovation, as with new shapes hardnesses, and colors. Even new flavors are possible.

<https://www.listchallenges.com/100-popular-candies>

Canes

Comments: Sensors need to detect off-kilter or movable terrain, with audible warning.
rb.gy/z37m3

Canoes (See also: Kayaks)

Comments:

- These could be transparent, and with sun/weather covering.
- We need no tip canoes (bloated bottom curve?), and somersault over with bubble window canoe.
- Pontoons for canoes would help stability.
- Could we invent a two-story canoe, with ladder for the upper deck?

Canteens

Comments: These need to modernize, vs. being known as being Army green and round.

Cantilevers

Comments: Interviewing experts could uncover new uses and applications.

Car antennas

Comments: These need to be more subtle and aerodynamic.

Car carriers

Comments: These tractors can never be mechanically allowed to accidentally collapse, or damage to cars of humans can ensue. Using them, or interviewing users would show me their new needs (besides aesthetics).

Car invisible to police

Comments: This will sound impossible, but they already have initial technologies to make stationary objects invisible to the naked eye, by deflecting what's seen. Science can investigate whether this is possible when an object is moving (doubted, but maybe?).

<https://www.youtube.com/watch?v=ZWqpYHHNgXA>

Car mats

Comments: These need color, and a solution to dropped coins between seats; they also must be customizable.

<https://tinyurl.com/yc7bwnuh>

Car roof racks & carriers

Comments: Some fold down into vehicle's silhouette, for aerodynamics. They could become expandable, for more packing room.

<https://tinyurl.com/54ecmw3h>

Car seats

Comments: Interviewing users would show me their new needs (besides aesthetics). Whiplash should never be possible, by technology that absorbs crash impacts, to protect the babies.

<https://tinyurl.com/ms925c2x>

<https://tinyurl.com/5c75mecv>

Car sports flags

Car tire jacks

Comments: These could be battery lifted, and/or bring NASCAR tools to private vehicles.

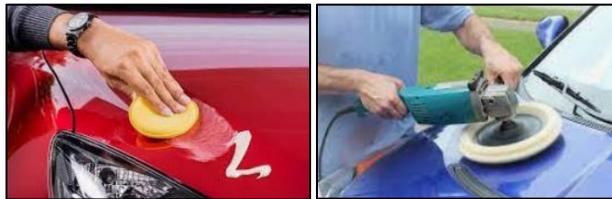

rb.gy/o2frk

Car touch screens

Comments: Computers' popularity have now moved to car dashboards. What else could be next?

Car waxing

Comments: We need automatic spinning waxers, and spray-on wax.

Carbon fiber/Kevlar

Comments: New materials are coming, as science and research advances.

Carpentry tools (See also: Buzz saws, Chainsaws, Circular saws, Construction tools, Cordless drills, Fence hole digger, Hammers, etc.)

Comments: Modern electronic tool box (organizes, etc., tool organizer (alphabetically with tool shape on

Carpets

Comments: Materials have evolved, like from Berber to hardwoods (which are easier to clean and maintain)

Carpet cleaners

Comments: These need to be more powerful in smaller sizes.
(much less bulky, needed)

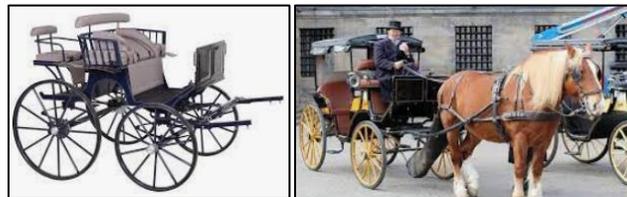

Carports

Comments: These can be made more professional, vs. trailer park-like/primitive/cheap. They need to be less bulky, and more stylish, yet just as functional.

rb.gy/fqisz

Carriages

Comments: Motorized would ease horse's strain (but would need crash-avoidance technology, so as not to crash into them)

Cars (See also: Corvettes, Duallys, 18-Wheeler trucks, Flying cars, Futuristic cars section, Saturn, Tesla, Trucks, etc.)

Comments: This category could be enhanced by the following innovations:

- Like with concept cars; ‘everything begins with an idea,’ or thought, or concept.
- Car warns you about specific recommended parts that are about to wear out, or that did and need replacing (avoids being ripped off by car repairmen).
- Rubber car bumpers (bounce off car wreck).
- Easier car tire changing (one-step, like at NASCAR).
- Fire extinguisher or sprinkler system in car (for fiery wrecks).
- Sun visors for all car side windows.
- Speak-to car radio finds selected stations and songs (if playing).
- Volume control for blinkers, for the elderly.
- No nail-puncture tires.
- Door protectors (of all sorts)
- We already have scent balls that blow up in car to eliminate cigarette smoke smell (mini blasts).
- Car tires safely stable in ice.
- Fast gas filler upper (like at Indy).
- Temporary blinding light or louder-than-usual car horn for those not using blinker.
- Automatic re-charging batteries.
- Car sensor when veering off course (Cf.: eye movement triggered?).
- Locked out keys.
- Remote control car mirrors fold in.
- Buy charged batteries at gas station (electric cars), or keep it in the trunk for long mileage vacations? Natural gas powered cars are the future, too.
- Wrecks that don’t crash cars or hurt people.
- Water-powered cars (an Iranian scientist already invented this)

<https://tinyurl.com/4r9aa6s7>

Carvana

Comments: Car elevators exist at some mansions' garages. Competitors now allow ordering, online, they then deliver to home.

Cash registers

Comments: The Square Reader applies to cell phone. Touch screen and speak-to and it speaks back, is needed.

Cashier's checks

Caskets

Comments: The cheapest are burlap or cardboard; cremation is also cheaper, as no one sees it, six feet under, decaying.

rb.gy/0ibxu

Caster trikes

Comments: Rear-wheel drive? Get it to spin around, 360 degrees.

<https://tinyurl.com/49uk93hz>

Cat litter boxes (See also: Self-cleaning cat litter boxes)

Comments: Modern ones claim no human interactions are needed for clean-up. That is (or would be) a great improvement.

rb.gy/mrfu5

Cat scratching posts

Comments: Observing their use, or interviewing cat owners would show me their new needs (besides aesthetics).

rb.gy/007j5

CB radio

CDs

Comments: Scratches and sun exposure harmed their usefulness. Could those be overcome, so they make a resurgence?

Ceiling fans (See: Fans)

Cell phones (See: Smart phones; See also: Flip phones)

Cell phone towers

Comments: Find multiple-uses for them, like police bird's eye camera surveillance, or electronic billboards. Safer climbing ladders are needed.

Chainsaws

Comments: These need a sensor, for auto-shutoff if fingers are detected.

Chairs

Comments: These are boring. They need hygienic cushioning. They are often not ergonomic (a problem)! Do you know anyone with a literally flat, square butt?
rb.gy/p1fa4

Changing tables (See: Baby changing tables)

Changing pads (See: Baby changing pads)

Channel changers

Comments: These need self-sterilizing, and speak-to technology (perhaps tied to Alexa).

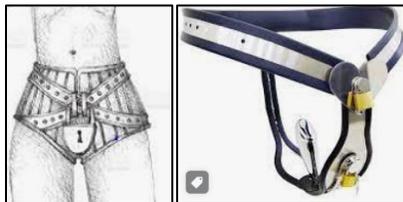

Chopstick

Comments: These can have new tastes, smells and increased chafing protection.

Charcoal grills (See: Outdoor grills)

Chastity belts

Comments: These could insert with alarms? They are very bulky, and questionably impractical (i.e., problems).

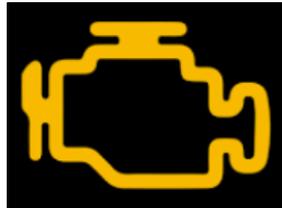

rb.gy/um2sv

Chaw/chewing tobacco

Comments: Substitute safe or safer tobacco features, with natural chemical highs.

Check engine light

Comments: We need notices that detail exactly what needs to be fixed, tied to the car's computer.

Chemicals

Comments: Miracle grow for hair?

Chess (See also: Board games)

Comments: Robot/AI competition? You can now play online, with competitors in different places.

Chips & salsa

Comments: There should be no double dipping, or broken chips, or crumbs. If new product innovations are needed, to ensure those outcomes, that is progress/improvement.

Cryonics

Comments: Interviewing users would show me their new needs (besides aesthetics).

Cigarettes

Comments: These need to be made healthier/safer, with more natural and less dangerous ingredients.

Cigars

Comments: Could these be adjusted to be much healthier and safer?

Circular saws

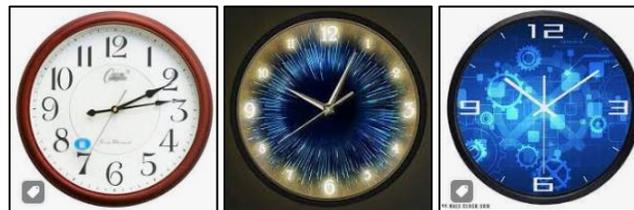

Comments: As with chainsaws, these need a sensor that automatically shuts off with fingers detected.

Cirque du Soleil

Comments: Competitors are needed, to do new/different tricks and shows.

Clocks

Comments: These are boring, and style/aesthetics are about all that be changed, besides the shape. The functionality remains needed, in some circumstances. They can be digital, as well.

rb.gy/jclh3

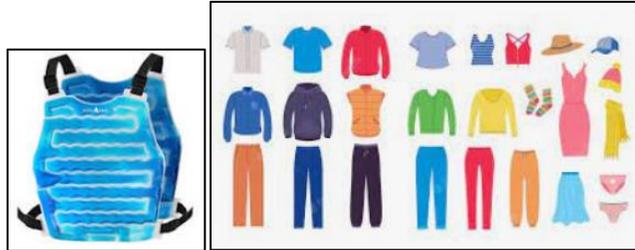

Closets

Comments: Walk-in closet organizers need speak-to technology to find items with a focused spot light (or computer screen identification.

rb.gy/k3la4

Clothes (See also: Bikinis, Coats, Dress suits, Halter tops, Hand bags, Tuxedos)

Comments: This category could be enhanced by the following innovations:

- Cooling ice vests.
- No sweat, no staining T-shirts and PJ's.
- Shoes with springs.
- Professional-looking outdoor clothes drying clothes line (aesthetics).
- Wonder hangers and benda hanger, 800.986.9861.
- Clothes organizer returns items to preset position (like at cleaners).
- Fast forward shoes with rounded bottom high heel area momentum giving shape.
- Air conditioned suit for motorcycle (and bicyclists).
- Balancing shoes, with curved bottom and fulcrum touches ground.
- Under arm pad in shirt (sweat gatherer).
- Snow shoes with traction, above the wetness/dirt.
- A button on shoe ties and unties it.
- Air conditioned clothes (shirts, suits, pants, etc.)
- Hill climbing shoes (and stairs spring propel upwards).
- Cooling (and heating) hats.
- Comfortable ties that appear tight, but aren't.
- New suits that are comfortable (how?).
- Shoes for walking on your hands, safely.
- Safe, asbestos-like emergency suits for home fires.

Clothes dryers

Comments: Make them at useful level, vs. bending down (i.e., adjustable legs). Space beneath can be for storage.

rb.gy/jhvgi

Clothes irons

Comments: Make them unable to burn/singe clothes.

Coats

Coffee makers

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

rb.gy/jhvgi

Coke

Comments: New flavors or additives? Competitors need a create a new brown cola competitor.

Color guards

Coloring books

(new ones coming)

Combs

Comments: Public use requires them to be expandable, to fit in your pocket.

<https://tinyurl.com/wy879mwdvwptQPwvihqAs&bih=762&biw=1600>

Commercial scales

Comments: Interviewing users would show me their new needs (besides aesthetics).
<https://tinyurl.com/4j4mawcm>

Compass

Comments: Can this capability be put into a cell phone (may already)?

Computers (See also: Flash drives)

Computer screens

Comments: Make them surround sighted, or 3-D?
tiny.cc/mxa9vz

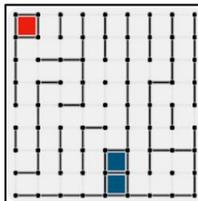

Computers (See also: Touch screen displays)

Comments: These need speak-to technology, with voice customizable commands for every use.

Concrete

Comments: This came from man-made materials, by experimented chemical mixes. It needs to vary in hardness and quick drying capabilities. Sometimes it needs near instant hardening (before rain), and some uses need hardness greater than usual.

Connect the dots

Comments: This simple game has kept many a kid less bored in church, from my personal observation.

Construction (See also: Bucket trucks, Box trucks, Bull dozers, Cranes/Tower cranes, Dump trucks, Earth diggers, Excavators, Fork lifts)

Comments: Wet construction sites—vacuum out the rain, and burn or blow the dirt dry

Construction dumpsters

Comments: Make them more slightly, if not more curvaceous. Yes, they're functional, but they need not be unsightly.

Contact lenses/Contacts

Comments: How can you avoid freaking out, poking them in your eyes? Laser surgery substitutes exist, but if this problem was solved, I might use them, especially if they can be left in for days.

Container ships

Coolers (See also: Water coolers)

Comments: These are now on wheels. They can be automated, and need remote control.
<https://tinyurl.com/5b5w5mup>

Cop cars

Comments: Cops need to be able to track license plates and VIN numbers, from longer distances.

Copiers

Comments: These need to be speak-to, and icons self-describe, audibly, vs. asking nearby office supply workers.

Cordless drills

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). As always, more power, longer-lasting batteries, and self-charging are always improvements.

Cork removers

Comments: These need to be automatic/battery-powered.

tiny.cc/nxa9vz

Corsets

Comments: Obviously, these need to be modernized.

tiny.cc/oxa9vz

Corvettes

Comments: New shapes are coming. Who will design them? Will it be you?

tiny.cc/pxa9vz

Cosmetics (See: Make-up)

Cotton balls

Comments: Interviewing manufacturers, one could discover potential new uses.

Cotton swabs (See: Q Tips)

Couches/sofas

Comments: For innovations, list their negatives/problems. You can change the colors, or materials. Modern couches include sectionals, for variety in their shape and use.

rb.gy/9la6u

Cow bells

Comments: These are OK, as is? They need newer pitches/sounds, by new shapes.

Cows/horses shade

Comments: There are cheap to fancy solutions, all serving the same function.

Cowboy boots

Comments: These need to be personalized (i.e., customized artwork).

tiny.cc/qxa9vz

Crabbing nets

Comments: These could be automated, pulling up the rope, like a reel.

tiny.cc/rxa9vz

<https://tinyurl.com/2s3ejee8>

Cranes/Tower cranes

Comments: These must be designed so they can't blow over in high winds.

Crayola Crayons

Comments: Glow in the dark? Smells would tempt eating, or improve the experience of their use?

Credit cards

Comments: These replaced only using cash, in the 1970's. With numbers and identity verification, they can make robberies less beneficial to the crooks. Now we can just tap them or get them near check-out scanners. It all makes checking out faster and easier.

Crock pots

Comments: To me, these are boring. At least make the external design 'cool.' Automatic shut off should occur when the food is/contents are done.

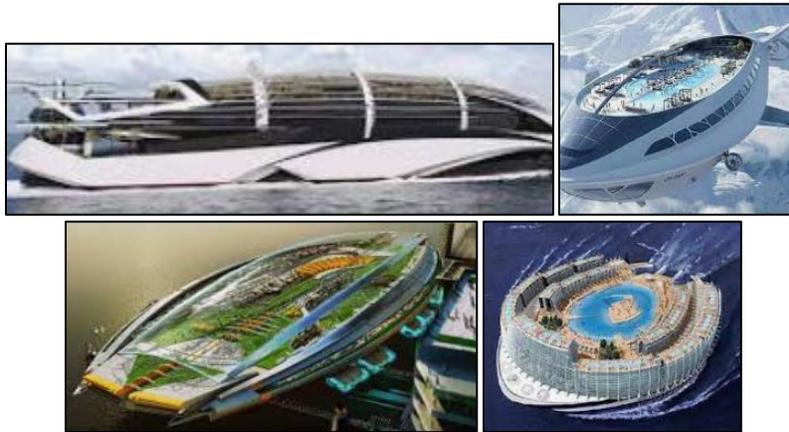

Cross country machines

Crossword puzzles

Comments: Ultimate creativity is exhibited by the authors. They serve as brain stimulators, for users.

Cruise ships

Comments: List modern amenities, vs. food and shuffleboard.

Crutches

Comments: These can cause pain under the armpit. They may need more cushions. We now have kneelers on wheels.

tiny.cc/sxa9vz

Cup holders

Comments: These are functional, mainly. They need size adjusting, to keep contents tightly secured.

tiny.cc/txa9vz

Cursive writing

Comments: This innovation sped up printing by hand. Now computers and smart phones have made our youth almost incapable of writing in cursive, or using pens and pencils.

Cutting horses

Comments: Observing or interviewing users would show me their new needs (besides aesthetics).

Dances

Comments: New dances are surely coming. Will you be the inventor of the next craze?
https://en.wikipedia.org/wiki/List_of_dance_styles

Deafness (See also: Hearing aids)

Comments: We need subtitles scrolling across glasses, when one is spoken to.
<https://tinyurl.com/5y92kpmc>

Debit cards (See comments on credit cards)

Decks

Comments: these need slanted access, for ADA needs, and to be water-proof, so there is no need to re-seal).

tiny.cc/vxa9vz

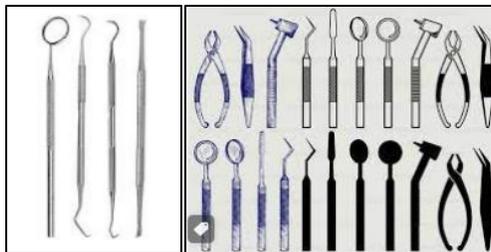

Decorations (See: Wall hangings)

Dehumidifiers

Comments: These can be noisy, bulky or unsightly/functional. Consider those three traits problems, and overcome them by design and functional fixes.

tiny.cc/wxa9vz

Dental tools

Comments: These home use tools save you as many dentist trips, used 'religiously'. They need to be sanitized, afterwards.

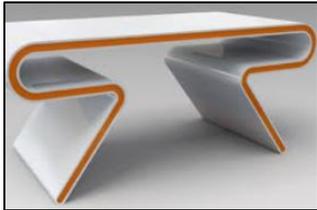

Dentists

Dentures (See also: Veneers)

Comments: These are false teeth, and those that fall out are embarrassing, with inferior technologies or adhesives.

Desks (See also: Home office desks)

Comments: These are often boring. They need mechanization.

tiny.cc/xxa9vz

tiny.cc/rza9vz

Desserts

Comments: New ones coming. Will you invent it? (Ex.: Baklava ice cream)

https://en.wikipedia.org/wiki/List_of_desserts

<https://www.delish.com/cooking/recipe-ideas/g3246/easy-desserts/>

Dew rags

Comments: Make these more fashionable. Why are they needed?

tiny.cc/yxa9vz

Diamonds

Comments: Manufactured ones are becoming more accepted, vs. stigmatized. No one sees the difference, in public.

Diaper bags

Comments: These need to be functional and stylish; not mainly functional.
tiny.cc/zxa9vz

Diaper disposal

Comments: These are often smelly, dirty, have a nasty feel, and are overall gross. Consider these problems needing fixing
tiny.cc/0ya9vz

Dictionary

Comments: New words are coming. Will you coin them?

Dieting

Comments: Feel full pill (needed)
Smell machine (inhale flavors vs. eat)

Digital cameras

Comments: Interviewing users can reveal new domestic and commercial uses.

Dining sets

Comments: These are not used as much, now days, as our lives are so busy, we hardly dine or eat together, as a family.

Dippin Dots

Comments: These unique frozen ice cream pellets have been sold in retail stores and groceries, from their success. What Texas State fair items could be made into commercial sales, at grocers.

Dishes

Comments: These might need lips, on their edges, or portion control dipped areas?
<https://tinyurl.com/ycx8teer>

Dishwashers

Comments: These need self-filling, or no bending down (raise-able to useful height), or provide better cleaning, for some models.

Diving boards

Comments: These need to be made safer, though with larger bounces.

DM/direct message

Dog cages & carriers

Comments: These need to be more fashionable, and be more comfortable/cushioned, for pets.

Dog houses

Comments: These could air conditioned and heated, or less useful in some regions.

Dog leashes (See also: Pet leashes)

Dog shows

Comments: Why not cat shows? Rabbits?

Dolls

Comments: Plus Size Penny (much smaller market)

Dominos (See also: Board games)

Comments: New games are possible, if one is creative.

Donuts

Comments: New colors, flavors, shapes and textures are coming.

Door knobs

Comments: We need sensors for hands approaching, vs. having physical turning needed.

Doors

Comments:

- We need home doors where burglars can't kick them in, or down; Perhaps three dead bolts, or better metal framing, or metal insides?.
- Some doors need to be see-through, with a button that makes them opaque, or not see through/clouded).

<https://tinyurl.com/2nvy2wwc>

[tiny.cc/1ya9vz](https://tinyurl.com/1ya9vz)

Drag races (See also: Funny cars)

Comments: Some venues need safer bystander areas. Observe Indy car changes, over the years, to find innovation trends.

<https://tinyurl.com/2p9tdu4a>

Dress suits

Comments: Apart from negative stigma, short sleeved for summer makes sense, in hot regions. We could even use air conditioned and heated, if the technology was compact.

Dressers

Comments: These are often boring. Automate drawers, by voice control.
tiny.cc/2ya9vz

Drills (See: Cordless drills)

Drinks/beverages (See also: Liquor)

Comments: New ones are coming. Will you create one? Experiment!

Driveways

Comments: These sink with dryness/drought, and get dirty, from oil. Consider these problems innovation opportunities.

tiny.cc/5ya9vz

Drones (See also: Flying machines)

Comments: There are many unimagined future uses, or functionalities, especially in the military.

tiny.cc/6ya9vz

<https://tinyurl.com/4cujdxnt>

Drums (See also: Electric drums)

Comments:

tiny.cc/7ya9vz

Drying racks

Comments: There is a variety of quality levels available. Make them fit in unseen areas, like closets. Make them three-tiered, where you reach (and them being collapsible).

tiny.cc/8ya9vz

Dually trucks

Comments: Are their purpose to provide more traction on dirt and rocks, or mere style and power?

Duct tape

Comments: There are various types, costs and strengths. Market niches come from changing things competitors offer.

Dump trucks

Comments: Besides aesthetics changes/improvements, using them, or interviewing users would show me their new needs (besides aesthetics).

<https://tinyurl.com/3erm2wvd>

Dune buggies

Comments: Do people still use these, much? Mainly rentable, on vacations?

Dust busters

Comments: These are often boring and a bit bulky. We need more power and less size.

Dusters

Comments: I find these boring, aesthetically, and often weak, and certainly unmaneuverable in tight or hard to reach places. Make them extendable, if not even bendable, and consider these traits problems to be overcome.

<https://tinyurl.com/yaxv6mwv>

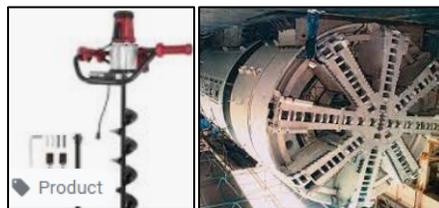

DVDs

Comments: Are there any future uses, anywhere in the world, with streaming and on-demand capabilities?

DVRs

Comments: Are there any future uses, anywhere in the world, with streaming and on-demand capabilities?

Earth diggers

Comments: We often need these for rocks, so anything man needs moved can be moved.

E-book readers

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). They should speak the words to the viewer (like Audible does with other applications)

Edgers

Comments: These need more precise targeting, by computer.

<https://tinyurl.com/55tzy2kd>

EEG

Comments: These seem so barbaric. Can they be useful and safe? (safe, longer-term?)

E-foil

Egg cartons

Comments: Clearly, eggs (and their crate/holders) are functional, but boring is not a goof trait, and besides aesthetic improvements, these cartons need to absorb impact, so eggs never get cracked in the manufacture to grocery process. Yet, they must retain stackability shapes, and cosmetic changes can't significantly add to the cost of a very practical product.

18-wheeled skateboard

18-wheeler trucks

Comments: Consider these improvements and add-ons:

- Metal panels beneath 18 wheelers, for aerodynamics.
- 18-wheeler alarm if encroachment as they sleep (for safety).
- 18-wheeler rear and side cameras.
- Rear vision cameras on 18 wheelers.
- 18 wheeler nose cone for flat fronted trucks' aerodynamics and fuel efficiency (and aesthetics; snap-on?).

<https://tinyurl.com/2s86d972>

Elderly needs (See also: Canes, Hearing aids, Walkers, Wheelchairs, Hearing aids)

Comments: Interviewing users would reveal many more new products.

<https://tinyurl.com/yjhj9vjf>

Electric bikes (See: Bikes)

Electric blankets

Comments: We need dual temperature control, which automatically shuts off when too hot/dangerous.

<https://tinyurl.com/bdexhkmv>

Electric car windows

Comments: Yes, we used to have to do this function by hand, kiddos! Many former luxuries are now deemed necessities.

Electric drills (See: Cordless drills)

Electric drums (See also: Drums)

Comments: What are their benefits, and why would someone want or need them, rather than traditional sets?

Electric razors (See: Razors)

Electric saws (See: saws)

Electric scissors

Electric longboard

Comments: These can be remote controlled, as with skateboards.

Electric toothbrushes

Comments: An electric flosser is needed; not just water jets, but actual flossing plastic.

Electrical cords

Comments: These need to be automatically retractable, like vacuum cords used to be.

Electronic dance music

Electronic funds transfer

Comments: Yes, we used to have to mail checks between home and owed businesses, kids.

Electronics & technology (See also: Alexa, Computers, Laptops, etc.)

Comments: This category could be enhanced by the following innovations:

- Motion detector sounds alarm.
- Floating microphone for rock stars (better than headphones, and snazzy, like you like your concerts to be; for a mental visual, remember the tool in Flubber with Mork).
- Public bathroom door that opens upon sensing your coming (vs. germs on door handles).
- Moveable electric outlets for home electrical sockets (possible?).
- Lie detector (brain wave scanning).
- Security guard system in my neighborhood (on bike).
- Turn on outside hose from inside the home.
- Bank robber Taser at exit door upon button (it may zap incoming innocents; just the price they pay?).
- Doorbell eye piece identifies friend or foe (as with businesses knowing criminal database by face recognition or fingerprint, vs. the Tribulation's 666).
- Easy grill rack cleaner and charcoal ashes cleaned (window sees in grill).
- No prank calls technology (possible?).
- Dog sniffing skill tool (for drugs detection).
- Food shopping (selecting food): Electric shopping cart that you sit in, you speak to computerized food type locator, it selects your preferences (best quality for lowest price), top shelf.
- Laser zaps flies and mosquitoes and wasps and hornets and bees.
- Car tire stuck in the sand or snow (tool).
- Highway I-45 made interesting by 360 degree fake, computer generated live scenes from elsewhere (with actual landmarks visible through it).
- Sun moving shadow creator.
- Tool for balancing a drunk staggerer.
- Lifeguard touch screen views swimmers, with zoom/binocular aided cameras.
- Automatic drape opening and closing.
- Adjustable ceiling fans (ceiling flush to lower toward floor but above head height).
- Robotic or electric pooper scooper (did you know some people make a living off that?).
- Purse snatcher purse blows up with red smoke (as in bank hold-up)? Noise only?
- Dance step teaching machine suit (all types; i.e., robot dance partner?).

- Sun tan lotion with bug spray included.
- Copy machine that speaks to you, and visually shows you how to correct error messages (i.e., its meaning).
- School street crossing robot.
- Scan in doctor handwriting so scanning computer later can read his notes and prescriptions.
- Tool to beep you when parking meter about to expire, remotely (clock on cell phone or watch?).

Elevators

Comments: These can be a bit slow. We need fast ones, especially for tall buildings, without jarring standing passengers.

Ellipticals

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Emails

Comments: This innovation made snail mail less efficient. You need to be able to delete a sent email from the receiver's inbox!

Emergency clinics (See: Urgent care clinics)

Employment

Comments: Employees need a vibrating butt cushion for desk jobs (sitting for hours). They could also exercise at their desk, with their feet pushing down (like a stair climber, with resistance).

EMS (See: Ambulances, fire trucks, police cars and police tools)

Enamel & whitening toothpastes (and fluoride)

Entertainment & fun (See also: Blue man group, Board games, Bungee jumping, Bowling, Cirque du solei, Hammock canoe, Sports)

Comments: We need a water balloon gun.

Erasers

Comments: We need customizable shapes and colors, for grade schoolers.

tiny.cc/9ya9vz

Escalators

Comments: These should never be able to dismember/break, where human parts get caught in them.

tiny.cc/aya9vz

Etch-A-Sketches

Comments: Are there any modern uses, if they were automated?

Evel Knievel

Comments: The public needs new tricks by new actors, for entertainment, like using 4-wheelers and scooters.

Eye glasses (See: Glasses)

E-wheels

Excavators

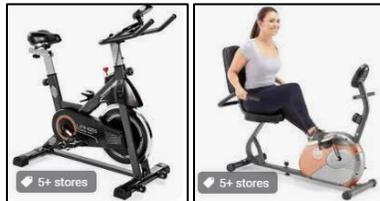

Comments: This land digger needs a computer with camera, which shows its operator what's in front.

Exercise (See: Sports & exercise)

Exercise (See also: Cross country machines, Ellipticals, Exercise bikes, Fitness trackers)

Exercise bikes (See also: Ellipticals, Cross country machines)

Comments: These could use (more) gears, for more resistance.

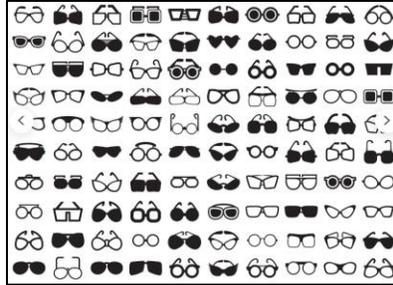

Espresso makers

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Eye glasses (See also: Contact lenses)

Comments:

- Make them so small that they position to where only one's eye pupils are focusing.
- We need truly “scratchless” lenses in glasses, meaning scratches are impossible.

<https://tinyurl.com/2xevtppf>

tiny.cc/eya9vz

Eyebrow designs

Comments: Will colored hair persons use colored eyebrows? We now have Laser-generated eyebrow tattoos.

tiny.cc/bya9vz

Face mask

Comments: We have pore cleaners, and chemicals that harden, to suck out acne contents.

Face visors (See also: Masks)

Comments: These can be fully clear, and more stylish versions can be needed, as with medical personnel usage.

tiny.cc/fya9vz

Facebook

FaceTime

Comments: We can now see people anywhere, live! That's like a visual Alexander Graham Bell invention.

Fairs (See also: Amusement park rides)

Comments: What Mousetrap ride improvements could you envision, or new applications, like one of these riding off a cliff at Amarillo's Palo Dura Canyon (or roller coaster and ski lift)?

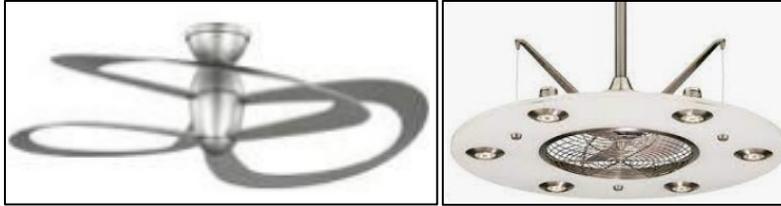

Fanny packs

Comments: Designers have to make them more stylish, and less noticeable, or they become even more passe, or out of style.

Fans (See also: Ceiling fans)

Comments: These could use bigger blades, more powerful speed/engines. Slant or re-shape them for better area wind coverage.

rb.gy/0zg9d

tiny.cc/hya9vz

Faucets (See: Water faucets)

Fence fillers (See: Schools)

Fence hole digger

Comments: Can we automate these?

Fences

Comments: Make them adjustable, or able to change colors.

tiny.cc/jya9vz

Ferris wheels (See also: Amusement park rides)

Comments: Make three levels of three wheels?

Fingerprint scanners

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics).

Fire extinguishers

Comments: Make these smaller, more powerful, and more aesthetic, to fit home décor.

Fire persons

Comments:

- Firemen X-ray glasses warn of decayed/compromised/stressed structures.
- Infrared identifies structural failure in fire before collapses on foremen.

Fire pits

Comments: In many cases, the heat really doesn't fan out to surrounding persons. Fix this!

tiny.cc/lya9vz

Fire sprinklers

Comments: These could pop down, when being used; otherwise, more hidden in the ceiling.

Fire trucks

Comments: Riding on and observing them, or interviewing users would show me their new needs (besides aesthetics).

Fireplaces (See also: Franklin stoves)

Comments:

- These produce little heat, to warm people.
- What new fireplace tools (all in one?; aesthetics?) could be imagined?
- An instant fire douser tool (without water puddles) is sometimes needed.

Fireplace matches/starters/lighters

Comments: You could make them longer, to avert singe-ing. They need a gauge, for identifying fluid/alcohol levels.

Fireworks

Comments: New ones are coming. Could they be made to make new designer shapes in the air, colors, spell out something, or make musical sounds as they erupt? Interviewing manufacturers would show me their new needs and/or capabilities.

Fish finders

Comments: These could be made more specific, to individual fish or fish type identification.

Fishing boats

Comments: Quality ranges vary, as do costs and sophistication of functionalities.

Fitness trackers

Comments: I am told those black rubber belts across leg or chest are for checking heart beats. Is that that useful, for runners? Could other body metrics be measured thereby?

Flags

Comments: New ones coming, for what uses? New nations? Will you design them, or can you think of a good design?

Flash drives

Flashlights

Comments: Using them more often, or interviewing users would show me their new needs (besides aesthetics). More brightness, or wider scope, on less size, more powerful or self-charging batteries would always be an improvement.

tiny.cc/nya9vz

Flip phones (See also: Smart phones)

Comments: The concept is now being applied to smart phones, electronically and artistically.

Flippers

Comments: These can be variously shape redesigned, and are needed for hands.

Floaties & pool noodles (See also: Floats)

Comments: You can always make fancier models, with more durability, lighter yet stronger, or with more bells and whistles.

tiny.cc/w1b9vz

Floating bikes (See: Ocean bikes)

Floating chairs (See Floats)

Floating tent

Floats (See also: Rafts)

Comments: New ones are coming. We could use remote control life rafts that steer them to drowning victims. You should be able to safely stand up in a raft.

tiny.cc/oya9vz

rb.gy/m60e9

Flossers

Comments: We need better ones, for back teeth, and allowing users more control.

Fly swatters (See: Bug zappers)

Flying cars

Comments: These are coming soon, and already FDA-approved ones exist. Get used to this idea and reality.

tiny.cc/vya9vz

Fog lights

Comments: Using them, or interviewing users would show me their new needs or uses (besides aesthetics). Somehow, vehicle drivers need to be able to detect whats beyond the fog, to prevent risks and harmful dangers.

Flying machines

Comments: How could we have great power for long distance flying, without all the size and bulk? Almost every other product gets more powerful yet less large, by iterative improvements!

<https://www.youtube.com/watch?v=xHGkOQUtIRk>

Foil surfing

Comments: Using or observing them, or interviewing users would show me their new needs (besides aesthetics).

Folding bikes

Comments: Do many people need this functionality? It's clever, if not as practical, for many.

<https://tinyurl.com/4kx5p92n>

Food (See also: Candy, Chips and salsa, Coke, Desserts, Donuts, Food wraps, Fudge, Gourmet hamburgers, Gum, etc.)

Comments: We need food products like the following:

- Modern deep fryer (controllable heat and identifiable burning, inside the unit).

- Pressure cooker.
- Baggie sealer and cereal bag.
- Hamburger patties fast and un-burnt.
- Change food combinations and additives.
- Baklava ice cream (suggested at Blue Bell).
- Hawaiian popcorn flavor (come up with custom or funny flavors).

Food processors

Comments: These used to be popular; seemingly less so, today.

Food trucks

Comments: Do these have sanitary needs, or long-lasting onboard freezers?

Food wraps

Foot massagers

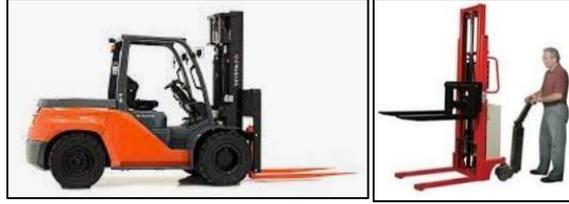

Forks & spoons

Comments: You can't improve, or reinvent the wheel? Only in design/look, vs functionality?

Fork lifts (See also: Pallet jacks)

Comments: Make them fully safe for operators, and those around.

Forts

Comments: In our busy world, we need 'plug and play' models for kids who don't want to construct/build.

tiny.cc/wya9vz

4-wheelers/ATVs

Comments: These need windshields, for no mud, and mud or water exiting tire capabilities, so they never get stuck.

rb.gy/p6zr4

Fragrances & colognes

Comments: New ones are coming. Can you think of ingredients to create one?

Franklin stoves

Comments: What is the benefit, and are there even more modern uses?

Freeze dried

Freezers

Frying pans (See: Pans)

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). Self-cleaning would be nice, as with Teflon never wearing out, and their alerting users when the heat/flames are too high, so they never scorch.

Fudge

Comments: New flavors are coming. Can you think of ingredients or flavors to make a new one?

Funerals (See also: Caskets, Gravestones, Hearses)

Funnels

Comments: Are there even more uses for these? Interviewing manufacturers could reveal the answer.

tiny.cc/0za9vz

Funny cars

Comments: Observing or riding in them, or interviewing users would show me their new needs (besides aesthetics). Always, more power/speed and more safety is an improvement.

Furniture (See also: Futons, Lazy boys)

Comments: Consider:

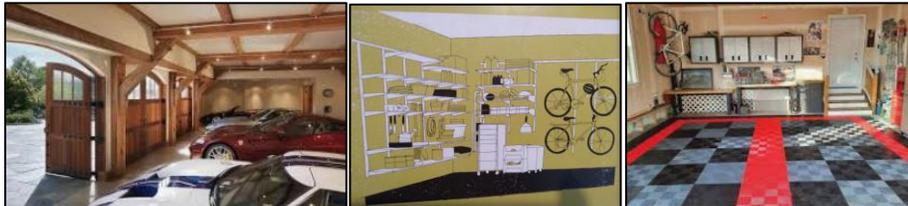

- Electric rocking stairs.
- Under bed wood shoe rack on rollers.
- Better shoe racks (Ex.: retrofit armoires, non-flat screen TV cabinets or gun racks).
- Under-bed pull-out shoe rack organizer (fancier).
- Lighted sock drawer when pulled out.
- Rocker couch.
- Drawer beneath couch cushions (Ex.: toy box).
- Pumpable firmness on couch and chair cushions.

Futons

Comments: These used to be circular and bamboo structured, kids.

Garages (See also: Carports)

Comments: Garages need such products as the following:

- Garage door opener half-way down button.
- Sensor alarms when your garage parking is in far enough.
- Shelf with holes for balls (different sized for football, baseball, basketball).

<https://tinyurl.com/msc7kvwc>

Garden hoses

Comments: Make them unable to kink, and automatically retractable.

tiny.cc/1za9vz

tiny.cc/70b9vz

Gardening tools (See also Lawnmowers, Rakes and Shovels)

Comments: We have de-weeder sprays and diggers. How could computers, cameras and robots identify exact needs for destroying?

<https://tinyurl.com/2s37sey8>

Gas cans

Comments: In-car use needs to prevent spillage in the village.

Geo dome climbers

Comments: There are old-fashioned Jungle Jims (i.e., circle vs. half circle models), which were not utilized, for decades, over safety concerns by local authorities, nationwide, kiddos. Fun averted for fear of bodily harm.

Gifts

Comments: We need record your voice greeting cards, and they shouldn't erase after one listen. They should also be able to record what you want them to say.

Grills (See: Outdoor grills and Automobile grills)

Glamping (See: Camping)

Glass ceiling trains

Comments: Why is Canada, vs. U.S.A., known for them? America has sites worth seeing from trains.

Glass rack trucks

Comments: Observing or interviewing users would show me their new needs (besides aesthetics).

Glasses (See: Eye glasses)

Gliders

Comments: Is there any fix for wind shear, or turbulence, with them having no machinery/engine?

Globetrotters

Comments: Apply this type of entertainment value in other sports.

Gloves

Comments: These need to be heated or cooled.

Go carts

Comments: These should be made unable to flip or roll.
tiny.cc/4za9vz

Goggles

Comments: Make them less boring, and more stylish.
tiny.cc/6za9vz

Golf carts

Comments: Make them more aerodynamic, even if not functionally needed, but for aesthetics.
tiny.cc/7za9vz

Golf clubs

Comments: New shapes and sizes are needed, to enhance golf results?

Gondolas

Comments: Why are these less used in U.S.A., than Europe?
tiny.cc/8za9vz

Gotees

Comments: If (some) people change the color of the hair on their heads (Ex.: green, purple, blue), why not clash or match the goatee with what's on top?
tiny.cc/9za9vz

Gourmet hamburgers

Comments: This is a popular trend, vs. the days when McDonald's and Wendy's were the main go-to's.

Government services

Comments: This category could be enhanced by the following innovations:

- Curbs to stop you (more squared) or warn you (slanted).
- Item total-er each type, when about to expire/go sour, order form generated for shopping list.
- Best price locator at nearest by grocery stores, cf.: smart pantry closet does the same inventorying .
- Smart water meter changes with weather (conserve).
- Glow in the dark night highway workmen suit
- Curb railroad crossing violations with technology.
- Sensor detects if intersection is being under- or non-used, so fewer people wait at 'dead' stop lights.
- Citizen pot hole reporting phone number (311?).

GPS

Comments: These have also been used for pet trackers, utilizing smart collars.

Grain silos

Comments: Interviewing users would show me their new needs (besides aesthetics). What are their problems and needs?

Grass skis & sleds

Comments: We also need these for skates, for use on dirt and for mountains.

Gravestones

Comments: Make these customizable, perhaps including holograms, or able to have audible messages.

tiny.cc/bza9vz

<https://tinyurl.com/3jfxrwhk>

Grills (See: Outdoor grills)

Guitars

Comments: Observing or interviewing users would show me their new needs (besides aesthetics).

tiny.cc/fza9vz

Gum flavors

Comments: New ones are coming. What flavors would you like to see?

Guns (See also: Weapons)

Comments:

- Make these safer, through smart technology.
- We need gun detectors, for within 100 yards (for public safety).
- WE need guns that lock onto targets (which automatically sounds an alarms, when set on target(s)).

<https://www.youtube.com/watch?v=5TKN53J2IkU>

Gutenberg press

Comments: Is there no modern use for this relic? Likely not (besides history museum displays).

Gutter Guard

Comments: This product eliminates the need to clean out gutters. What other way could that service be performed by a product of your design?

Gutters

Comments: These are for eliminating rotting wood, or wet humans, below, as they siphon water in a controlled fashion. How could they be improved, or more slightly?

Gym bags

Comments: Observing or interviewing users would show me their new needs (besides aesthetics).

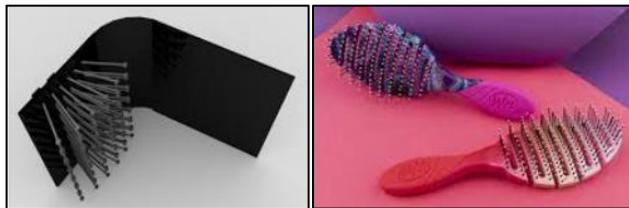

tiny.cc/gza9vz

Gyroscope

Comments: A smaller, or more compactable home exercise and stretching version could be useful.

Hair brushes

Comments: Could collapsible ones be able to be carried on your person?

tiny.cc/iza9vz

Hair coloring

Comments: These need to be able to self-adhere in the back of the head.

Hair dryers (See: Blow dryers)

Hair extensions

Comments: Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/jza9vz

Hair lint rollers

Comments: The sticky dries out; textured fabric doesn't. Consider these traits as innovation opportunities.

<https://tinyurl.com/34af4td6>

Hair products

Hair straighteners

Comments: Make them unable to burn hair.

Haircuts (See also: Gotees, Handlebar moustaches, Mohawks, Man buns, Sideburns)

Comments: New ones are coming. What would you like to see, and not see?

tiny.cc/kza9vz

<https://tinyurl.com/4fat6p8a>

Halloween masks & costumes

Comments: New ones are coming, like future 'stars.' Which models would you like to see?

tiny.cc/lza9vz

Halter tops

Comments: Could there be sexier, but still modest options?

tiny.cc/nza9vz

Hammers

Comments: How could this be made electric, or automatic, besides as a gun?
<https://tinyurl.com/m5x7j9x>

Hammock canoe

Hammocks

Comments: Could these have portable pods/stands, that take up much less space, when in use? A flip over circular hammock would be interesting, as with new designs of a floating hammock.

tiny.cc/oza9vz

<https://www.trendhunter.com/slideshow/futureforward-hammock-designs>

<https://tinyurl.com/yuj3w9kv>

<https://tinyurl.com/5dxats6d>

Hand bells

Comments: Self ringing, for Christmas Salvation Army. Automated, or person plays all.

Hand flippers (See: Flippers)

Hand grenades

Comments: Observing or interviewing users would show me their new needs (besides aesthetics).

Handbags (See also: Purses)

Comments: Interviewing users would show me their new needs (besides aesthetics).

Handcuffs

Comments: Interviewing users would show me their new needs (besides aesthetics). They're obviously uncomfortable. Could they secure the suspect and be more comfy?

Hand wipes & hand sanitizers

Comments: This is portable hygiene. How many people can carry sanitizer fluids with them, unless in pocket-shaped and sized container versions?

Handlebar moustaches

Hang gliders

Hanging chairs

HardiePlank

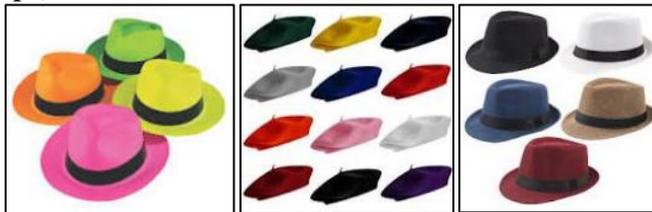

Harrier airplane & Osprey helicopter

Comments: This craft floats/hovers in air. Can we engineer them to be safer during that transition?

Hats (See also: Ball caps)

Comments: Make these unaffected by head sweat, which discolors and/or disfigures them.

tiny.cc/pza9vz

Hay bails

Comments: These are circular or rectangular, for portability reasons. What other changes could make them more effective?

Hay rides

HDTV

Headlight restoration kits

Headphones

Comments: These need to be 'invisible' (clear-ish, or unseen) in one's ear, yet fully capable of sound reproduction.

<https://tinyurl.com/24hecv9u>

Headstones (See: Gravestones)

Hearing aids

Comments: Can these be made smaller, clear or skin colored, yet as or more powerful?

<https://tinyurl.com/366w4btn>

Hearses

Comments: Getting too stylish can detract from the somber dignity of the occasion. Using, or interviewing users would show me their new needs, besides aesthetics, like roller rails for the casket to slide in on, then remain secured/locked down for travel.

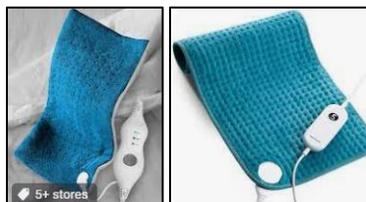

tiny.cc/x1b9vz

Heat & water pumps

Heated snow ski suits (See: Coats)

Heated blankets (See: Electric blankets)

Heating pads

Comments: The user should be able to determine where the heat goes, as it is often wasted on the extremities. They don't heat up quickly, get real hot, and need to be able

to self-secure tightly to a bodily area, rather than requiring a second person to strap them on tightly.

tiny.cc/y1b9vz

Hedge trimmers

Heel wheels

Comments: We need propelling shoes, that use gravity and technology to make people run faster.

Helmets (See: Bike helmets and motorcycle helmets)

High chairs

Comments: Make them unable to fall over. One of my kids got stitches and a lifelong scar, from this failure of design (and caused us a great crisis emergency of stress).

<https://tinyurl.com/yrynwfatm>

tiny.cc/02b9vz

Hiking boots

Comments: Besides bulky aesthetics, and solid soles, they need more flexibility and style, as well as heating or air conditioning features.

Hiking equipment

Comments: Helpful assets for long hikes include hiking waste pack, snake bite kit, water, food, Taser, compass, GPS, cell phone, flare gun, etc..

<https://tinyurl.com/ys8zrtf>

Hitches

Comments: Hitches should be able to be tucked away (a bit unsightly, when not in use), or adjustable (as current ones are) or easily removable, when not in use. Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/qza9vz

Hold-n-spin spinners

Holographs

Home office desks (See: Desks)

Home security & surveillance (See: Security systems)

Homes (See also: Architecture)

Comments: Concept houses/homes of the future could be enhanced by the following innovations:

- Automatic paper towel dispenser.
- See movies anywhere in your house.
- Auto room light sensors for your home (vs. commercial application only).
- Modern clothes lines (dry, but slightly/aesthetic).
- Dog or lion sound at sensed silent alarm upon home break-in.
- Down garage door dings (sensor) rear of bumper scratches alarm if not far in enough.
- Home fire alarms beep when battery's low (can't see which one is beeping).

- Home fire sprinklers.
 - Modernized home intercoms.
 - Homes below ground, but look O.K. above ground.
 - Laser sighted fire retardant (heat sensor) in home fire (targeted).
 - Moving stair handles gently propel elderly handle holders upward/forward.
 - Non-drinkable water switch on sinks and showers.
 - Self-cleaning home air filters (alarm).
 - Sunny side of house, window automatically tints when hot.
 - More modern fireplaces (that actually warm nearby people, or heat the house).
 - Changing color homes.
 - Variable color house walls.
 - Kitchen cabinet top space utilized.
 - Garage organizers.
 - Flexible houses (expand and contract).
 - Lap pool in hot tub home exercise product (make this more available to the public).
 - Computer screen shows your wardrobe—choose it and it selects the garments.
 - Down wasted attic space (don't put flat ceiling; hang/dangle stuff with tool for accessibility).
 - Fire retardant wood in homes.
 - No bugs in your house when doors get opened.
 - Ripple shaped home stairs.
 - One way mirrored windows, to see out but have full privacy
 - Walk totally nude in your house by all viewpoints smoke screened by button
 - Closed bin prevents ants and roaches (vacuum-sealed?).
 - Automatic-opening trash can top with sensor (vs. touch it; not part of can, and can't break; this lessens germs).
 - Recycling bin (remote control on wheels) goes out to driveway/alley automatically on set days.
 - Tanning booths at home.
 - Remote control cantilever (adjusts to the sun).
- <https://tinyurl.com/4kx5p92n>
<https://tinyurl.com/2um88h8t> (predominantly dorky ones, here)
<https://www.pinterest.com/mtochika/residential-architecture/>

Homecoming mums

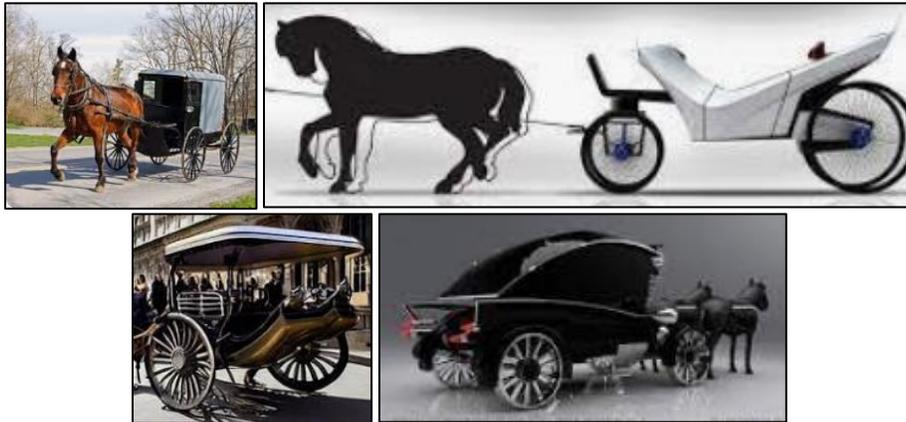

Hood ranges

Hop scotch

Horse & buggy (See also: Carriages)

Horse saddles

Comments: We need more padded horse saddle cushions, so city slickers like me might enjoy the experience more.

Hot air balloons

Comments: Could we add an engine, for improper weather?

Hot tubs

Comments: Can we make floating hot tubs, like for the ocean?

tiny.cc/sza9vz

Hotel rooms

Comments: Interviewing frequent users would reveal many new and needed products.

tiny.cc/tza9vz

Hotels, motels & resorts

Comments: In fires, we need hotel parachutes. One has already been made.

Interviewing frequent users could reveal even more needed innovations, especially by listing customers' most common complaints.

Hover air bike

Hover boards

Hovercrafts

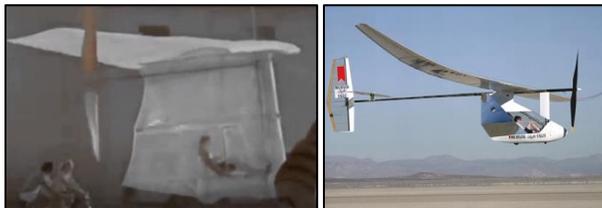

Comments: What civilian uses could these serve, especially around swamps?
tiny.cc/uza9vz

Human canon shoots

Comments: These are almost exclusively seen at circuses. Could they have different trajectories, or be made more interesting, yet safe?

Human-powered flying

Comments: We need perfected jet packs, controllable, like modern Segways. And with smaller yet more powerful engines.
<https://tinyurl.com/3txm7umr>
https://www.youtube.com/watch?v=_ALzxKRtIXY

Humans breathing under water

Comments: This is probably impossible, but let science answer that for certain.

<https://byjus.com/question-answer/in-the-byju-s-video-it-said-that-we-cannot-stay-submerged-in-water-for/>

Humidifiers

Hunting blinds

Comments: Besides built-in prey sound machines, they need many, if not all the creature comforts of home.

<https://tinyurl.com/ye27edk3>

Hunting equipment (See also: Tree blinds)

Comments: Could there be a shotgun that makes an identifiable sound (or vibration), when a target is within sites?

Hybrids/EVs

Hydrofoils

Comments: If this technology allows a vehicle to race through water faster than otherwise, commercial applications would be needed for quick scurrying across oceans, for travel, as those compete with airlines (absent the sight-seeing cruise ships).

Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/wza9vz

Ice cream flavors

Ice cream makers

Comments: Homemade needs ingredients to compete with the flavors and texture and taste of such companies as Blue Bell, Ben and Jerry's and Haagen Dazs.

<https://tinyurl.com/4j4mawcm>

Iced teas

Igloo

I'm with stupid T-shirts

Infinity pools

Comments: Add completely clear-walled commercial pools.

Inflatable kayak

Infomercials

Ink pens (See: Pens)

Inline skates

Instant coffees

Intercoms

Intermittent fasting

IPods

IQ tests

Irons (See: Clothes irons)

ITunes

Jars

Comments: In a word, they're boring and functional. Shapes, colors, textures, patterns, or digital labels might change that problem, though they're always going to serve a practical (vs. aesthetic) function. Could they be made into displayable art pieces, when not in use?

rb.gy/ffm54

Jeeps

Jet packs (See: Flying machines)

Jenga blocks tumble

Jet skis

Comments: What if these had a miniature jet engine?

<https://tinyurl.com/3skux3sh>

Jig saw puzzles

Jock straps

Jorts/Jean shorts

Juicers

Jump houses

Comments: Why are these usually square or rectangular? Couldn't they have levels, and half-levels, to ascend into, and jump down from, safely? Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/xza9vz

Jump starters

Jumper cables

Junk food

Kangaroo jumps

Kayaks (See also: Canoes)

Kettles

Comments: How could these be made more aesthetic/less boring, and what new or improved functionalities could be added to them?

tiny.cc/yza9vz

Key fobs

Khakis

Kinesiology tape

Kiosks

Kitchen ovens

Comments: Besides aesthetics, or customization to unique kitchens, these need to heat up quick, sense and warn when foods are over-heating/burning, and self-clean (as many already do). As usual, interviewing users would show me their new needs (besides aesthetics).

<https://tinyurl.com/wy879mwd>

Kitchen pantry

Kitchen sinks

Comments: (See also: Comments on faucets). Shapes and colors could be changed to more rounded, and more angled/slanted sides. Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/20b9vz

Kitchens (See also: Blenders, Bread makers and slicers, Can openers, Clothes dryers, Clothes irons, Coffee makers, Crock pots, Dishes, Dishwashers, Drying racks, Espresso makers, Food processors, Freezers, Hood/ranges, Washing machines)

Comments: This category could be enhanced by the following innovations:

- Microfreeze.
- Kitchen ceiling cabinets pull down, and hides away for more storage space and less wasted space.
- Can crusher for recycle (and can cleaner).

- Better use of (often wasted) space above top of kitchen cabinets.
- Never burn another thing in the modern oven's technology.
- Instant heat up oven.
- Automatic paper towel dispenser in kitchen.
- Automatic potato skinner (computer shapes surfaces)—tool used for all veggies and fruits
- needing skinning (vegetable and fruit peeler, like oranges and bananas).
- Clean tuna oil squeezer.
- Full pull-out refrigerator drawers.

tiny.cc/10b9vz

Kites

Comments: New shapes (and sounds added) are about all I can consider for innovations, as these already use color and patterns. They need to be designed for maximum aerodynamics, so they're not hard to raise into the sky (i.e., get more lift faster).

tiny.cc/40b9vz

Kitesurfing

Kleenex

Knee boards

Knee scooters

Knives

Comments: Knife blades should be made to have automatic blade covers when not being moved around or used. Besides that, aesthetics can always be more creative. Self-sharpening would be helpful, when they become dull.

tiny.cc/50b9vz

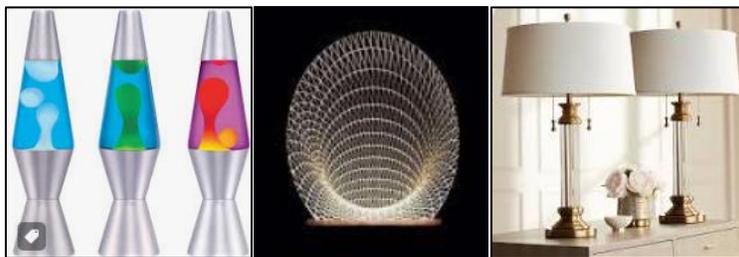

Ladders

Comments: We need a stair stepper ladder, that automates only 2 steps.

<https://tinyurl.com/ycjfuua>

Lamps

Landline phones

Landscaping

Language interpreters

Comments: Some people could use a cultural morays identifier. Multi-lingual dolls could educate kids of these distinctions, much earlier.

Lanterns

Comments: Can these be made more modern, compact, and smaller, but more powerful, perhaps by LED lights?

tiny.cc/60b9vz

Laptops

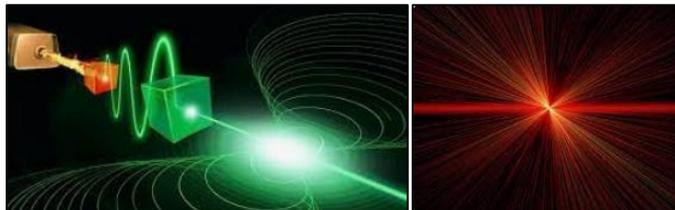

Laptop batteries & keyboards

Comments: These need speak-to capability, and their batteries need to be self-recharging, and to have workday-long battery life, or longer (without risk of overcharging, or starting a fire).

<https://www.trendhunter.com/slideshow/futuristic-laptop-concepts>

Lasers

Laser hair removal

Laser Tag

Comments: Make a home version, for neighborhood back yards.

Lawn care (See also: Landscaping)

Comments: This category could be enhanced by the following innovations:

- Retractable power cord reel.
- Leaf blower catch-all goalie.
- Edger by buried barrier plastic.
- Yard Leaves gathered by large tongs, to place leaves in trash bag or can.
- Auto-snow shovel.
- Laser weed killer (to the root, doesn't start a fire).
- Plastic track to down edging grass and outlining beds vs. weeds and grass, and cutter on track edges yard and beds.
- Pop up yard weed whacker lawn mow alternative/option.
- Lawn leaves vacuum for your yard.
- Hot air (vs. fire) snow melter.
- Under fence no grass zone item imbedded.
- No kinking, bending cheap garden hoses (hard plastic six inch clamp down piece moves to where problem occur (clear or same color).

Lawn chairs (See: Pop-up chairs)

Lawnmowers (See also: Edgers, Hedge trimmers)

Comments: We can benefit from autonomous and self-driven versions, as with computer guided, customized to a scanned yard (and able to avoid all obstacles).

tiny.cc/80b9vz

<https://tinyurl.com/yv94d542>

Lazy Boy recliners

Comments: These need a massaging feature (if not already done), and styles must move away from their 'old man' image. There could be tandem versions, or entire couches.

<https://tinyurl.com/kxbdztcj>

Lazy rivers

Comments: Here we see home and baseball venues. Where else could they be utilized? Lunch stress relief for business persons elevated between downtown skyscrapers?

<https://tinyurl.com/yc7t94v6>

Leaf blowers

LED lights

Comments: The more prevalent and cost effective these become, the more applications they can have, even as their use has skyrocketed, from their low cost, high visibility features. Interviewing users would show me their new needs (besides aesthetics). Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/a0b9vz

Legos

Lemonade

Comments: What new flavors would you like to see come to market?

Levels

Comments: I find these aesthetically boring, but the digital version is quite an improvement.

Life rafts

Comments: Interviewing users would show me their new needs (besides aesthetics). They should have self-healing technologies, so punctures never subject them to sinking.
tiny.cc/d0b9vz

Life vests

Comments: These are often boringly shaped and colored. Their same functionality could come with much more stylish shapes (more like the picture on the right), as well as needing improved mobility. Science could say how much material (i.e., minimal) is needed to secure a human's buoyancy.
tiny.cc/b0b9vz

Lights & electricity

Lightbulbs

Lighters (See also: Fireplace matches/starters/lighters)

Comments: These are not real practical to carry in a man's pocket (vs. women's purses). They need to be more compact, but with refillable fluid, so they are more one-time usage, to retain a carryable shape and size.

tiny.cc/e0b9vz

Limousines

Lincoln logs

Lipsticks

Liquid paper

Liquid soap

Liquor & hard seltzers (See: Drinks)

Little blue pill

Little Golden Books

Live out of a van/Off the grid/On homesteads

Livestream church services & sports

Living rooms (See also: Couches/sofas, Dining sets, Fireplaces)

Locks & keys

Log cabins (See: Cabins)

Longboards

Lookout decks

Comments: The third from left image is the glass horseshoe of the Grand Canyon. Take this capability many other places. China adds software to scare patrons that the glass floor is cracking (humorous or cruel?)

tiny.cc/g0b9vz

Lounge chairs (See also: Pop-up chairs)

Comments: These should conform to the shape of the human torso. They should also be adjustable to different body types, and firm-able for different body parts (like Sleep Number technology).

rb.gy/rpbkr

<https://tinyurl.com/4s5fz3c8>

tiny.cc/h0b9vz

Low riders

Luggage

Comments: Who said these have to always be rectangular, or boxy? Yes, airline luggage compartments determine most of their shape, but small adjustments would make them more stylish. Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/12b9vz

Man purses (See also: Fanny packs)

Comments: Isn't this an example of an oxy-moron? It's hard to seem manly, using the concept of a female's purse, no matter how open-minded one might be, from naming/labeling and historic usage of that product.

tiny.cc/gya9vz

Marathons

Marker boards (See: White boards)

Masks

Masking tape

Massage chairs

Massage tables & chairs

Comments: If these served as massage beds in cheap hotels, the client would get revved up on their undercarriage, even as the masseuse adjusted their hind sides (and vice versa). Interviewing users would show me their new needs (besides aesthetics).

tiny.cc/k0b9vz

Massagers

Comments: More power with smaller size is usually an asset, beside modern style/aesthetics.

tiny.cc/l0b9vz

Matches (See: Fireplace matches)

Mattress toppers

Mattresses

Mazes

Measuring tools

Comments: these need to be automatic retracting and exiting, and more aesthetically appealing.

<https://tinyurl.com/yv4dxmnc>

Medical (See also: Knee scooters and Walking casts)

Comments:

- We need a posture product, for shoulders and back ("Wonder Back," or "Polly Posture").
- A needed tool would identify under-medication harm, and dangerous drug interactions (before it is allowed to dispense prescriptions to you).

Medical clinics (See: Urgent care clinics)

Megaphones

Men's suits (See: dress suits)

Merry go rounds

Metal detectors

Comments: Maybe these can't be made to not look dorky, but anything to make them less stiff looking, the user bend over, or their bulkiness lessen, would be an improvement.

tiny.cc/n0b9vz

Metal roofs

Micro mobility kickboard

Comments: These should be able to be steered by body weight shifting.

Microphones

Comments: these have undergone an evolution, like pastors using them in baptisms, unable to get shocked. They are now quite small and sleek, yet with good sound hearing and projecting capabilities.

tiny.cc/o0b9vz

Microscopes

Microwaves

Military (See also Weapons, Guns)

Comments:

- Warriors need strong but light-weight Knight in shining armor suits, for modern hand-to-hand battle uses.
- The military need helmets with bullet-proof clear face guards (open eared?), and heart and lung protection from bullets.

<https://tinyurl.com/3sy3amuy>

<https://tinyurl.com/bdf5y2ys>

Milk cartons

Mini trampolines

Minivans

Comments: Be it their external shape and style, or internal seat removability or adjustability, these have to become more ‘cool,’ and less soccer mom-oriented in their reputations.

<https://tinyurl.com/mr4jsax4>

Mirrors

Mittens (See: Gloves)

Mixed drinks (See: Liquor)

Mixers

MLB (Major League Baseball)

Mohawks

Money clip

Comments: Plastic, different shaped, or more flexible might improve these, so they conform to one's behind better, upon sitting down.

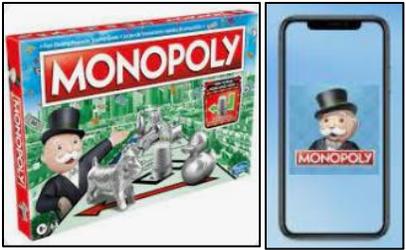

<https://tinyurl.com/2uafvm2v>

Money orders

Monkey bars

Monopoly game

Comments: They now have an online app of this original board game. What other games could do that?

Monster trucks

Moon roofs for car & home

Mopeds

Comments: By stereotype/reputation, these are flimsy, un-powerful (compared to motorcycles), and often dangerous on open/main roads. Change those problems, and make them more stylish/'cool,' in their aesthetics.

<https://tinyurl.com/3h8wrjwu>
tiny.cc/p0b9vz

Mops

Comments: What might a robotic mop look like?
rb.gy/i26qj

Mosh pits

Motorcycle helmets

Comments: These need to breathe, by having more outside openings/vents, or be heated and air conditioned. Their safety feature often makes them quite heavy and bulky. Perhaps new materials could make them lighter, more flexible, yet just as safety functioning to avoid injuries.
<https://tinyurl.com/n5734en2>

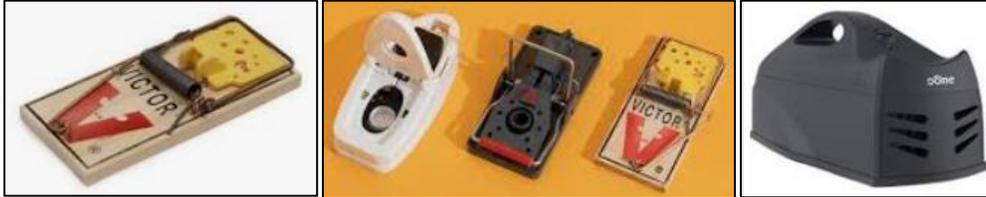

Motorcycles (See also: Our futuristic motorcycles section)

Comments:

- The designs for protective, yet light-weight motorcycle clothes is nearly endless, for designers.
- We need no fall-over motorcycles (gyro balanced).
- We can have solar-powered motorcycles.
tiny.cc/q0b9vz

Mouse Traps

Movies

Comments: The consuming public needs a service that de-curses the latest movies.

Moving airport walkways

Moving photo holders

Mufflers

Mulch

Mullets

Music (See also: Drums, Electric drums, Guitars, Hand bells)

Comments: This category could be enhanced by the following innovations:

- Automatic radio station suggester per genre (in different regions).
- Radio station advertisement/commercial dubber automatically inserts time, weather, news headlines or dead air).
- Radio searches for your chosen song, artist or genre.
- AM and PM music radio without the morning chatter boxes.
- DJ keyboard.
- Car radios that dub all commercials.
- TV shows able to be heard on car radios.

Myers-Briggs

Nail polish

Name badges

Comments: What would these look like, if they were made digital, or electric?

NASCAR

NBA/National Basketball Association

Neck braces

Comments: Obviously, wearing one of these makes the user stand out. Design them to look more natural, though always constraining, to perform healing (if possible).

tiny.cc/r0b9vz

Neck support pillows

Comments: These should be able to self blow-up, with air, or roll up when not in use, as they're quite bulky to carry around, when not in use. They should conform to the body, and be shaped accordingly.

tiny.cc/s0b9vz

Needles

Neon signs

Neon parades

Comments: You see these at 6 Flags, Arlington (amusement parks) and even churches (Second Baptist, Houston).

tiny.cc/t0b9vz

Nerf balls & guns

Comments: Interviewing users would show me their new needs (besides aesthetics). The obvious child toy look of many of these do not lend themselves to use as kids grow older. Change that problem.

tiny.cc/u0b9vz

NFL/National Football League

Nicotine patch

Night vision goggles

Comments: The functionality needs to come in a much lighter, more flexible and less bulky design.

tiny.cc/w0b9vz

Nursing bras

Ocean bikes

Comments: Are these able to speed along, or are they slow? What could make them faster, like rudders, or maximizing the propulsion, using hydraulics?

<https://tinyurl.com/mr3baf5s>

Ocean products

Comments: Consider:

- Ocean leg extenders for the deep waters.
- No sting light weight suit (or sun tan lotion) for jelly fish.
- Anti-ocean current butt motor.
- Pull draw string inflatable arm bands if drowning (in ocean).
- Drown-proof swimsuit (virtually?) undetectable from the outside.
- Floating hot tub boat.

Off-road large wheel

Office buildings (See also: Our Buildings, and our Architecture section)

Comments: these, often, have boring interiors, and occasionally have small external architectural elements. No new ones should just be square/rectangular, and boring.

Office supplies

Oil drilling

Oil paintings

One wheels

Online shopping (See also: Amazon)

Organs

Outboard boat motors

Outdoor decks (See: Decks)

Outdoor grills

Comments: Major changes are needed to the aesthetics of these products.

Outdoor umbrellas

Comments: These often have awkward angles and shapes. They need any shape desired, as well as angling, to avoid the sun.

<https://tinyurl.com/26msa6zf>

Over-and-under TP holders

Pacifiers

Comments: Make them look, feel and shaped exactly as their natural counterpart, which can help wean a baby off their mother's direct milk, more naturally.

tiny.cc/x0b9vz

Padded bras & butts

Comments: Interviewing users would show me their new needs (besides aesthetics).
Falsies

Paddle boards

Comments: We need an inflatable standup paddle board.

Paddle boats

Comments: These are usually boxy, flat and plastic-looking. Can't we improve these problems? Make them unsinkable, and not mold-producing, over time.

tiny.cc/y0b9vz

Paint

Paint brushes

Comments: Make these no drip, Sherlock.

Paint by number

Paint sprayers

Painting

Comments: We need dripless paint brushes and rollers (anti-gravity and upside down), if not done already.

<https://tinyurl.com/56j44mb6>

Paintball

Painter's pants

Pallet jacks & fork lifts

Pallets

Pans

Comments: What specialty types can you imagine? What do you not like about current state, as an innovation opportunity?

tiny.cc/z0b9vz

Pant zippers

Comments: No man should ever be caught with his fly open, and they should open automatically, or on voice activated command.

Paper/plastic bags

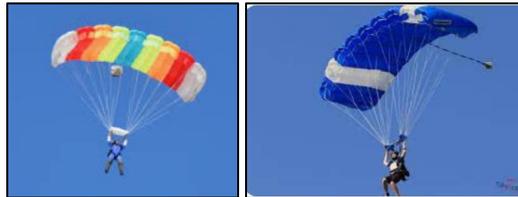

Comments: How could we make these greener, from biodegradable materials?

Paper towel dispenser

Comments: We need home use for these, more homey-looking, rather than pulling paper towels off a static rack (luxury vs. necessarily laziness).

Parachutes

Paragliders

Comments: Can their shape be adjusted to make them move in different ways, or more flexible. Interviewing users would show me their new needs (besides aesthetics).

Parasailers

Comments: Can their shape be adjusted to make them move in different ways, or more flexible. Interviewing users would show me their new needs (besides aesthetics).

Parking garages

Comments: A new development is small green or red lights coming from ceiling-based rods, to indicate parking spaces that are open. Interviewing manufacturers or users, we could list problems with parking garage designs, and solve them.

Parks

Comments: We need swayable wooden bridges/walkways at playgrounds.

Password

Comments: These board game were made into TV game shows. Which other ones could be?

Patio covers

Comments: Many aesthetic changes are possible, like anti-mold; soft vs. stiff materials, etc.

Patio furniture

Comments:

- We need a waterproof solar screen shading circle that adjusts with the sun's movement.

- A portable gazebo might come in handy.
<https://tinyurl.com/yc234dmy>
<https://tinyurl.com/2p9u28z3>
<https://tinyurl.com/3x2vd8df>

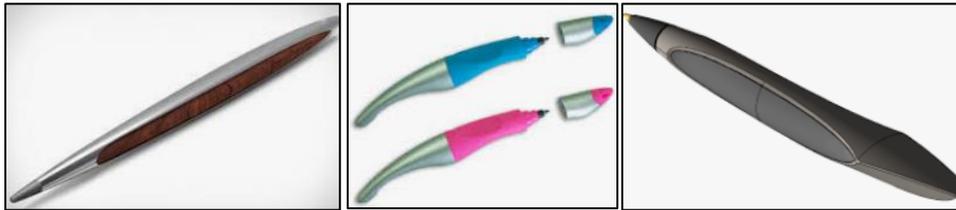

PB & jelly

Pedal scooter

Pencils

Pens

Comments: We need more ergonomic ink pens. Man's fingers aren't created in pen-conforming shapes, though we can adapt.

Pepper & salt

Pepper grinders

Percolators

Perfumes (See also: Fragrances)

Period-proof underwear

Comments: There are probably a variety of ways to prevent leaks (as this article shows). Design new ones.
<https://tinyurl.com/525d62f5>

Pest control

Comments: Now we have Raid light traps. What else could attract pests to a killing machine, like smells or tastes?

Pet collars

Comments: There already exist glow-in-the-dark dog collars, and even smart ones. What other capabilities could be added?

Pet doors

Pet leashes

Pet products (See also: Cages, Collars, Feeders, Leashes, etc.)

Comments: Products for improving:

- Dog carriers.
- Dog treats.
- Smart collars.
- Bird cages.
- Rabbit cage cleaning.
- Treat dispensers.
- We need doggie doors that shut down and sense it's your pet/animal, by implanted chip.

<https://tinyurl.com/mr3m2t7n>

<https://tinyurl.com/8kmncr5m>

Pets (See also: Dog category, Surgery collars, etc.)

Pews

Comments: Many aesthetic changes are possible. They could be more comfortable.

Pianos

Pianolas

Comments: Are there any modern uses for this self-playing piano/player piano?

Pick up sticks

Pickle ball

Pickup trucks (See also: Duallies)

Pillows

Pinball machines (many aesthetic changes possible; electronic)

Ping pong

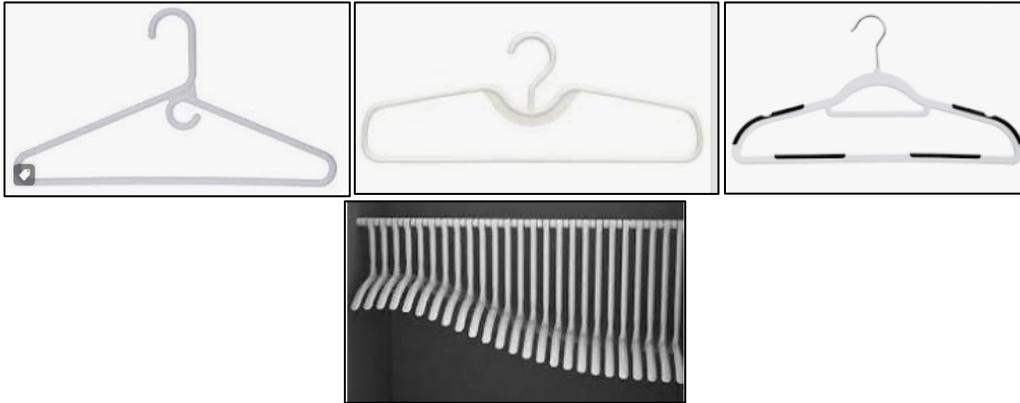

Comments: Could we benefit from a wider, round ping pong table (like a new sport)?

Pipes

Planes (See: Airplanes)

Plastic coat hangers

Plastic fences (styles)

Plastic surgeries

Comments: We have Botox, and the Botched TV show; people want inexpensive but quality facelifts, wrinkle removal, eyelid lifts, butt and tummy tucks, boob enhancement and reductions, nose jobs, etc.)

Play Doh

Play pens

Comments: Besides their being square and rectangular, what other shapes or amenities would you like to see added to these products?

rb.gy/63a37

Playing cards

Plays/dramas

Plugs/hair transplants

Poems

Pogo sticks

Comments: Pogo stick shoes, or one pogo stick per foot? Tandem pogos?

Poker

Polaroid cameras

Pole dancing

Comments: We now have these for at-home exercise; not just strip clubs. What other commercial products could go residential/private?

Police cars (See: Cop cars)

Police tools/products (See also: Cop cars, Handcuffs)

Comments: This category could be enhanced by the following innovations:

- Gun disabling device for cops (cf.: red light disabler in ambulance, and cop car vibrator to cars ahead of it).
- Shoot a net at running criminal you can't catch (too many donuts?; Ex.: African safari tool)
- Cops can see through buildings (SWAT) for fugitives (x-ray?; invasion of privacy concern).
- Cops can't be killed unintimidating Robocop suit (i.e., avoid bomb, and shots to brain and heart, primarily); helmet, face and heart protect from all angles; all other extremities can 'take it.'
- Cops can shoot through walls (snipers)?

Polo shirts

Pom poms

Pompadours

Pony tails

Pool covers

Pool cues with laser guide

Pool tables

Comments: Would it be neat/cool to have 8-sided pool tables (square or rectangle is their basic shape)?

Pools (See also: Infinity pools and Lazy rivers)

Comments: We need to lessen pool diving accidents, without overkill outlawing diving boards and slides. As you can see, shipping containers can now be made into pools (even clear walled ones), and there exist indoor-outdoor pools).

Pooper scoopers

Comments: Make these more aesthetic, less straight, self-cleaning and self-sanitizing.
rb.gy/ygqfn

Popcorn makers

Comments: What new flavors/flavorings can you imagine?

Pop-up chairs/lawn seats

Comments: For more variety ideas for new designs, look at the website catalogues of such places as Camping World or Bass Pro Shops. We need ones that are bouncy, spin, turn upside down and back again, and/or have shock absorbers.

Lawn nozzles (See also: Garden hoses)

Porch swings

Comments: These are often “stiff” looking (boxy and angled), and have one traditional swing motion. That needs to be able to be adjusted, sped up, and made more exciting. They also need to be weather- and mold-resistant.

<https://tinyurl.com/4rtpxr5s>

Porta potties

Portable inflatable projection screen

Portable neck fan

Comments: We need much greater power in sleek, portable and light versions.

<https://tinyurl.com/2s3s5dcy>

Pot pies

Comments: These need their crust and contents healthier, to have a shot at a comeback. At the same time, the Texas State Fair entrepreneurs could design new deep fried versions.

Power naps (at work?)

Power tools (See also: Construction tools)

Power/pressure washers

Pregnancy (See also: Breast pumps, Nursing bras)

Comments: Multiple means of supporting and comforting pregnant women could be imagined, whether standing or laying down (or even exercising).

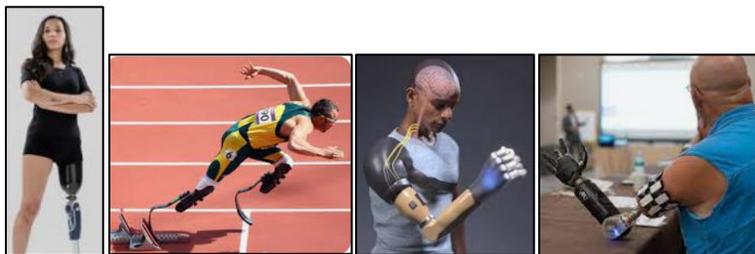

Prius (major electric/hybrid car)

Propel shoe legs

Prosthetics

Comments: Interviewing users would show me their new needs (besides aesthetics).
rb.gy/wzezp

Protest signs

Comments: These could be digital and scrolling, three-dimensional, portable mini electronic billboards, foldable, audible and flashing lighted.

Public access TV

Pull tabs

Pulpits

Pumice

Comments: This is used for foot callouses. What other materials can be discovered to solve whatever problems?

Purses

Push-up products

Comments: Interviewing users would show me their new needs (besides aesthetics). More stretching capabilities are needed, for more body arts in more directions, including several at one time.

<https://tinyurl.com/23u9chkc>

Putt putt golf

Comments: Could these be suspended in air, or incorporated into barefooted water use?

Q tips

QR codes

Race cars (See also: Drag racing)

Comments: Interviewing users would show me their new needs (besides aesthetics).

<https://tinyurl.com/3bb5n4un>

Radar detectors

Comments: One could ask if using these is sin (i.e., intentional law violating devices). I might argue the spirit (intent) of speed laws is public safety, and safe control of one's vehicle. But we all know, at certain speeds, these empower dangerous speed driving.
rb.gy/hubvz

Radar guns

Comments: Interviewing police could identify new needs to fill, or machine capabilities.

Radio/TV towers (See also: Cell phone towers)

Comments: These need to be made to allow safe climbing, for repairs. They could also add advertising, or police surveillance camera capability, to make them more multi-functional.

Rafts (See: Life rafts, Floats)

Railroad cars

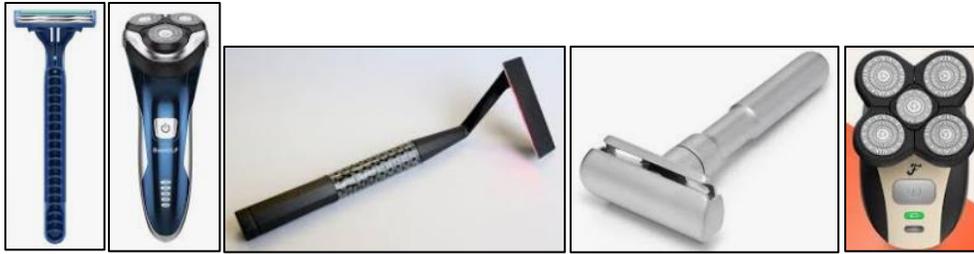

Rakes

Comments: The stiff shape and non-aesthetic nature of this functional product needs improving, but they also are poor in tight places (like corners or circular areas), and they should be able to grab up or suck up gathered leaves (without human involvement).
rb.gy/vpio1

Rap music

Razors

Comments: The female product, Nail, needs to be refined to allow daily “shaving” of men’s faces, by rubbing it on, and not risking nicks or cuts, or having to shave (time- and effort-consuming)! Make razors unable to nick or cut people.

tiny.cc/82b9vz

Reading glasses

Reality TV

Reclining bikes

Reclining lawn chairs (See: Lounge chairs)

Red Bull (Energy drinks)

Refrigerators/smart refrigerators

Comments: Consider:

- Computer selects only healthy foods from the refrigerator.

- Smart refrigerator (shows and tells you where products are located, when the inventory is low per speak to technology, and shows you where item is located (Cf.: camera and screen's map).
- Refrigerators are designed wrong—need long, one shelf where all food can be seen.
rb.gy/h4wn8
<https://tinyurl.com/5n8przmy>
<https://tinyurl.com/4ba2bx5n>

Remote controls (See: Channel changers)

Remote control cars/airplanes

Comments: Would there ever be a need for government-owned remote control actual cars, like in dangerous situations, where cops utilize robots? Remote control toys have many new designs and features possible.

Restaurant pay at table tools

Comments: Like parking garages, busy servers might need green and red lights telling bussers where to clean, or greeters where open tables exist.

Restaurant facades/architecture

Comments:

- Fast food establishments (like McDonalds) need trash can lids you don't have to touch (to avoid germs; sensor-operated).

- We need a restaurant noise (and smoke) reducer (Ex.: LOUD Joe’s Crab shack, Galveston, TX). Casinos have such smoke eradication technology.
<https://tinyurl.com/3n2vahkp>

Revolving door

Rifle scopes (See: Hunting scopes)

Rip sticks

Comments: Need an electric rip stick, as with every transportation tool.

River rafting

Comments: We need a rapids rider (enclosed raft), and a river raft that “can’t”/won’t turn over.

<https://tinyurl.com/3vprbmjp>

Road shoulder ridges

Road signs

Comments: I know traditional shapes and colors are needed, for legal communication purposes, but can’t there be any modernization, within those set parameters?

rb.gy/qrut7

Robotic surgeries

Rock climbing & repelling

Comments: We have real and man-made climbing walls. Whatever features of nature can we bring indoors, to utilize for exercise? Mountain climbers could benefit from jettison packs, for emergencies (i.e., increased safety).

Rocking chairs

Roller blades

Comments: In this category, we could also have:

- Roller blade sticks with wheels.
- Roller hands and blades.
- Rollerblades and roller skates with brakes, by hand held button? Hydraulic brakes?

Roller skates

Comments:

- These could be used at Aldi, where workers are paid for high performance. We need electric skates, be they traditional, inline, or even ice skates.
- Parents of kids need stretchable skates (and shoes), that adjust for growth, through the years.

Roller skis

Roof racks (See: Car roof racks)

Roofing

Comments: We need wrist and ankle braces for roofer safety (attached to a chimney?), if not already invented.

Roomba (Robot vacuums)

Rope climbing

Rope courses

Rope swings

Roundabouts

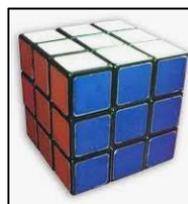

Rowing machines

Comments: How could these be modernized, or made to stretch more areas than mere pullout (or rowing) motions, to work more muscles?

rb.gy/h7zcl

Rubik's Cube

RV's

Comments: Using, or interviewing users would show me their new needs (besides aesthetics). Clearly, many people want all the comforts at home, while away.

rb.gy/dd8wt

Safaris

Safety nailers

Comments: There are several ways one could design solutions to this need, as we see one way coming from a Shark Tank TV show design. Avoiding bent nails or bruised fingers is the goal.

Safety pens

Sailboats

Comments: Using, or interviewing users would show me their new needs (besides aesthetics). Can the sail shapes and sizes be adjusted for more propelling off wind currents, or more flexible adjustments in tack? Can the hulls be made more aerodynamic, to glide through water more easily?

rb.gy/ipank

Salt (See: Pepper and salt)

Sand bike

Sand boxes

Comments: If not the size of the sand granules, or their color, the shape of the box, or cushioning of the seating (as well as sun protection) would be an improvement (as with music added).

rb.gy/ihnwj

Sand rails

Sand traps

Sandals

Comments: Interviewing users would show me their new needs (besides aesthetics). Aesthetics and easy access (slip-on) features seem to be the easiest innovations to this product.

<https://tinyurl.com/yc8cx29h>

Sandwiches

Comments: New ones are coming. Can you imagine what ingredients they will have?

Santa Claus business

Comments: Did you know that this business as \$20K in one month earning potential? So go grow a white beard and wide belly.

Saturn

Comments: This car innovated the one-price shopping experience (no dickering).

Saunas

Comments: We need more home saunas, as prices come down from less expensive designs, and economies of scale from increased popularity of use.

<https://tinyurl.com/fbm4tbdh>
rb.gy/nucea

Saws

Comments: How could these be made electric, without becoming circular?

Scales (See: Weight scales)

Schools

Comments: These are often used by elementary schools for school pride fence fillers of art and text.

Scissors

Scoters (See also: Mopeds)

Comments: Could we create a solar- or wind-powered scooter?
rb.gy/5vm8c

Scotch tape

Screenshots

Screw drivers

Comments: The screwdriver handle must conform to human body shapes, and not vice versa. Plus, their aesthetics are usually boring.

rb.gy/18wt1

Scrolling & neon signs

Seat covers

Comments: These could be customized, not just as to shape, but also colors and patterns/designs.

Security systems

Comments: Interviewing manufacturers and commercial users could yield new improvements, or problem identification, and even enhanced capabilities, from what we have today.
(home and commercial)

See saws

Segways

Comments: We could have Segways with handles. These type machines need to be safe, in case one loses their balance (roll bars or air bags?).

Self balance foldable skateboard

Self-cleaning litter boxes

Selfies & selfie sticks

Sewing machines

Sex tools

Comments: We need no pregnancy possible technology! A sexercise DVD might serve some useful purpose, like for married couples.

<https://tinyurl.com/2s36xw2n>

Shaving (See also: Razors)

Comments: The women's product of old, Nair, needs redevelopment for safe daily use for men's shaving. And we need no-cut/nick razors. What new foam flavors/smells or features would benefit this experience?

<https://tinyurl.com/ybwnkrxv>

Shazam

Sheds/Storage sheds (and she sheds)

Comments: Why do these often look like toy models? Make them mirror the house they're (usually) behind, be more modern, or less square and functional.

rb.gy/8qlv4

Sheets

Ships

Shish kabobs

Shock absorbers

Comments: These could be (and often have been) added to bikes, skateboards, and almost every transportation mechanism we possess.

Shoes (See also: Kangaroo jumps)

Comments:

We have jogging, dress; motorized, and casual vs. formal shoes, including Crocs, self-tying and slip in types. What types will the future bring? We need snap-on runner propelling shoe bottom.

<https://tinyurl.com/4562a5pu>

<https://tinyurl.com/36hhzpkh>

<https://www.youtube.com/watch?v=RWxyOdP9NhY>

Shooting ranges

Comments: Using, or interviewing users would show me their new needs (besides aesthetics).

<https://tinyurl.com/bdfpbhj7>

Shopping carts

Comments: These often look boxy, cheap, old-fashioned, and ideal for a homeless person's belongings. Fix those problems! Consider making them 'smart,' so they self-scan items placed inside them, for easier check-out.

Short wave radios

Shovels

Comments: The portion where a user's shoe shoves down on these needs to be more comfortable, and self-sharpening of their blade would be helpful. The handles are not usually conforming to a body's shape, but vice-versa (a 'problem' needing improvement)

rb.gy/z7igc

Shower heads

Comments: These need to be multi-directional, and pulsating, with heat adjustment capabilities.

Showers

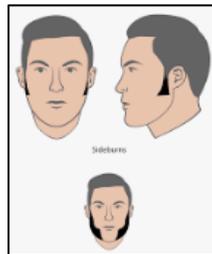

Comments: We need auto dial shower water temperature gauges (as with tubs).
<https://tinyurl.com/553ncuty>

Shuffleboard (See also: Table shuffleboard)

Comments: Could this game be made to be electronic, or rules or tools changed, to make it more interesting?

Sideburns

Side-by-sides

Siding (See also: Hardi Plank)

Sightseeing bikes

Silly Putty

Comments: Do these need multiple new colors, and might scents makes them enhanced, without encouraging them seeming to be edible?

Sink faucets (See: Water faucets)

Skate parks

Comments: Interviewing users would show me their new needs (besides aesthetics), to make them more exciting, while less dangerous.

rb.gy/x24lf

Skate plate

Skateboards (See also: Boardless skateboard, 18-Wheeled skateboard, Electric longboard, Heel wheels)

Comments: Could we have double deckers, or electric? We need to consider:

- Inline skateboard.
- Skateboard pump with your feet.
- Back sail for wind-aided skate boarding.
- 360 degree turning skateboard.
- Skateboard with center wheel only (balance and move forward); you can ride two of them at a time.
- Stair stepped skateboard (or staggered–harder to master).
- Tandem skateboard.

Skates (See: Roller skates)

Ski bikes

Ski boots

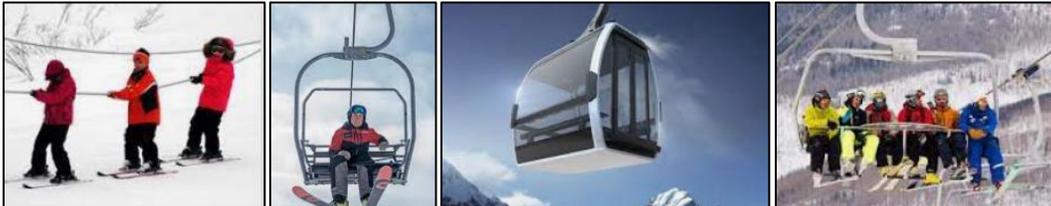

Comments: What futuristic styles or functionalities could be added or invented, for these?

<https://tinyurl.com/3pndct9r>

Ski doos

Ski lifts (See also: Gondolas)

Comments: The chair seats are often not real cushy, and could be heated. No one should ever fall out of a chair lift, or get stuck in one, when they need to ascend.

rb.gy/x7z2x

Ski runs

Comments: Ski slopes have evolved (especially with X-games sports), to include moguls, jumps, pipes and rails, etc. What other new features could we add, for more exciting rides. What features could project skiers higher, or further?

Skin care for men

Comments: We now have products like Dove body wash, for men. Apart from any stigma of being a 'metrosexual,' this and manscaping seem to be desired products especially for the younger (looks and health-conscious) generations.

Skylights

Sleds

Comments: We need sleds with brakes, and steerable (rudders?).

rb.gy/btfbw

Sleep masks

Sleeping products

Comments: This category could be enhanced by the following innovations:

- Sleep eye mask (fancier).
- Smart beds.
- Lumbar lever (lower back sleep support system).
- Flying cloud floating bed.
- A machine that makes you feel like you're sleeping on air (plastic balls, air jets, etc.)
- Butt pillow (for shoulders, when on your side).
- Bed snuggle knee pillow.
- Pressure pointed bed mattress (computer adjusts when you move around).
- Computer analyzed bed (i.e., contour shaping for ideal mattress resistance).
- Programmable radio alarm clock for 5 select start times, or customized “ringing” to random, select or set stations, with pre-selected volume; could even play your own voice (or family’s) as the recorded wake-up sound.

- Noise machine ear plugs or muff pads (head phones) for sleeping (automatically turn off at pre-set intervals).

Sleeping bags

Comments: Unless a human is rectangular-shaped, and full of fatty padding, these need to conform more to the human shape, and provide much more padding, of not heating and/or air conditioning.

rb.gy/7b27x

Slides

Comments: Include a Sea bike cycle slide, to other new innovations.

<https://tinyurl.com/mrx3raay>

Slingshots

Comments: This shows a term can represent more than one product, which is helpful to learn when innovating. Think of new definitions to old terms.

<https://tinyurl.com/34ba827r>

Slip & Slides

Comments: Interviewing frequent users could reveal new innovations, like a cushier landing, when kids initially jump onto these. A cushy stop point would help them not slide onto dirt or grass, with much momentum.

Slow cookers (See: Crock pots)

Smart car

Smart phones (See also: Cell phones, Flip phones)

Comments: Interview users to find future desired features, and trends for looks and features. An always on recorder could allow others to hear/monitor, especially for women having to walk in dangerous areas.

<https://tinyurl.com/64ffwcse>

Smart speakers (See also: Alexa)

Smoke detectors

Smoothies

S'mores

Snow melt products

Comments: Interviewing users would show me their new needs (besides aesthetics). Perhaps built-in heating elements, in private sidewalks and driveways, would eliminate the need for these products(?).

<https://tinyurl.com/2szvermb>

Snow ski quick-release bindings

Snowboards

Comments: We need electric snowboards (for flat, inbetween slope areas).

Snow shovels

Comments: We can eliminate snow by melting, blowing, shoveling, vacuuming. Back saver features and circular holes are in the right-most image.

Snow skiing (See also: Gondolas)

Comments: Consider:

- Snow skis able to grip on ice (retracting spikes, etc.).
- Ski on your butt (snow or water) or stomach.
- Ski shoes.
- Snow ski on all fours.
- Snow ski on your stomach (controlled).

Snowmobiles

Comments: How would you envision more futuristic ones, as to looks and functionality?

<https://tinyurl.com/bde3w8kc>

Snowshoeing

Comments: Interviewing users would reveal new innovations, like lighter weight, or more stability features.

<https://tinyurl.com/5y8cs2fw>

Snugglies

Comments: Very cushy features could be useful, like wearing a sleeping bag (heated or air conditioned).

Socks

Comments: What funky colors, patterns or pictures could you see on a customized pair you would buy? These can come with toes, or open air, as well as being vented/slitted.

Soda (See: Coke)

Soda fountains

Comments: We need DIY (do it yourself) home soda makers.
<https://tinyurl.com/4x4992uv>

Sofas (See: Couches)

Solitaire

Comments: I presume this game is now an online/cell phone app? Could all dominoes, or card games do the same?

Sonar

Sonograms

Sound machines

Soups

Comments: What new flavors and combinations would focus groups poll to want manufactured?

Space heaters

Sparkling water

Spas

Comments: We need portable personal spas, as well as in-home tub applications for spas.

rb.gy/4vetn
<https://tinyurl.com/yey93p9w>

Speakers

Speed boats

Comments: Science can discover the most efficient shapes to cut through water. The middle boat actually jumps like a dolphin (known as a Dolphin boat).

rb.gy/79lho

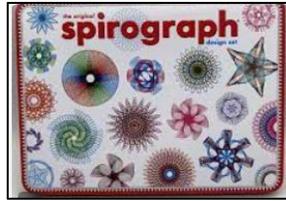

Speedos

Spell check

Spirographs

Sports (See also: ATV's, Bowling, Crabbing nets, Drag races, Dune buggies, Fish finders, 4-Wheelers, Go carts, Golf carts, Grass skis, Gym bags, Gyroscope, Sleds)

Comments: This category could be enhanced by the following innovations:

- Back stretcher tool (not just lean back stiffly).
- Upside down machine for 10 minutes for blood flow (automatic).
- Home gyroscope for human body stretching and exercising.
- Spa in your attic in the summer, consisting simply of a bench, in Southern regions.
- Ocean ball you're inside so waves flip over you (with rudders).
- Sports Barrel for use in ocean waves, with motor to take you back to the breakers.
- Entertainment for marathoners and triathletes to boost energy and reduce boredom.
- Somersault swing with harness (automated?).
- Rolling, riding ice chest (I saw one at the University of Illinois).
- Curved ping pong paddle.
- Electric or automatic rowing oars for canoes (steerable).
- Log-rolling toy (for balance and jogging in place (vs. treadmill).
- Man-made safe barrel for rolling ride down the Colorado River (cushioned, gyroscopic seat, etc.).
- Rollerblade tennis.
- Safe human sling shots.
- Water basketball (vs. water polo—shoot into a basket).
- World baseball (like the NBA).
- You in a bouncing ball.
- Curb sliding shoes.
- Modernized pogo sticks, prey finder for hunters, portable gym/weights, dart games, boxing and MMA, hockey gear, etc.

Sports chairs (See also: Pop-up chairs)

Comments: Again, their shape assumes human bodies are squared or rectangular. They also need more butt cushioning, if not heating and air conditioning elements (as well as sun blocking).

<https://tinyurl.com/59b6aru5>

Spotify

Sprays (See: Aerosol sprays)

Spring riders

Sprinklers

Comments: These need to be moisture-activated, where they shut off pre-programming, when it has rained enough.

rb.gy/ojeg8

Stairs (See also: Our Futuristic stairs section)

Comments: Staircases should be able to be tucked away, and automatically deployed, when needed, and their angles adjusted for the elderly (smaller angle) or athletic (steeper angle, if legal).

rb.gy/t2ek7

Stair stepper bikes

Stand-n-spin

Staplers

Comments: The stapler needs to be automated when a user places it above the desired pages (not just inserting pages into an opening; more like a nail gun).

State inspections

Stickers

Stilts

Stockings

Stop watches

Storage bins

Comments: These are boring. Can they be made exciting, while retaining their functionality? They likely need their flat top and bottom surfaces, but something has to make them more appealing. Do humans only own square and rectangular products? (No).

<https://tinyurl.com/4v2uc2r8>
rb.gy/k3205

Storage sheds (See: sheds)

Street lane deflectors (See also: Road shoulder ridges)

Comments: Governments need wrong way light blasts (or alarms), in areas known to suffer from wrong way drivers, especially at night. Such head-on collisions could be avoided.

Street lights

Comments: Interviewing users would show me their new needs (besides aesthetics). Smart street lights would change duration according to emptiness of intersection lanes, or flow of traffic build-up, at peak times.

<https://tinyurl.com/mrx7w6mp>
rb.gy/vnt42

Street signs (See: Road signs)

Stress relief products

Comments: Interviewing users would show me their new needs (besides aesthetics). Perhaps adding noise or lights, could enhance the experience of their usage.

<https://tinyurl.com/2yp5yj53>

Strobe lights

Comments: Interviewing users and manufacturers would show me their new needs or applications (besides aesthetics).

rb.gy/oociz

Strollers

Comments: These are usually boxy/rectangular, vs. curvy or body conforming, and their cushioning for baby backs and butts re sometimes minimal. Fix these problems, and let mom, dad, or whoever is pushing be able to watch the child as they are moved around (without serious sun exposure). Aesthetics can always be expanded, by artists/designers.

tiny.cc/01b9vz

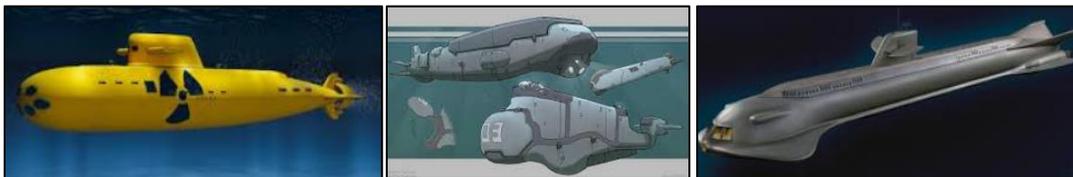

<https://tinyurl.com/4j7839fn>

Stucco

Stuffed animals

Submarines

Suction cups

Comments: Make these able for recreational use, to safely ascend building windows.

Suitcases (See: Luggage)

Suits (See: Dress suits)

Sun glasses

Sun hats

Sun rooms

Sun shirts

Comments: How will these evolve to be more futuristic and stylish?

Sun umbrellas

Comments: Could these be shoulder-pad mounted, rather than hand held, or hat held?
rb.gy/zbwqx

Sun visors

Comments: What will these look like 'in the future' (which starts today)? The answer is whatever someone/designers invent now, and develop then.

Sunscreen

Comments: We have evolved multiple SPF numbers; sprays and lotions, and even sun clothes. How could everyday wear be sun-resistant, but never look like it?

Suntan lotion (See also: Back sun tan applier)

Super soakers

Surfboards

Comments: These would benefit from being electric, to get oneself out to the waves. Could we make them to spin in circles, or over waves and wakes?

<https://tinyurl.com/34n9na9k>

Surgery collars

Comments: What other shapes could perform the same function, and be less obtrusive/more aesthetic?

tiny.cc/21b9vz

Suspenders

SUV sunken/hidden seats

SUVs (See: Minivans)

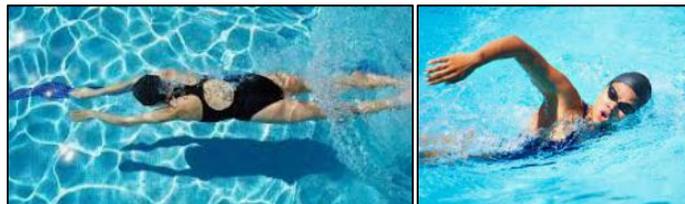

Sweat-free T-shirts (See also: Sun shirts)

Comments: Even adding vented areas allow for more ‘breathing.’ Interviewing manufacturers would show me their new needs (besides aesthetics).

<https://tinyurl.com/4zzvnpk>

Swim flippers (See: Flippers)

Swimming products (See also: Flippers, Floaties/floats)

Comments: Man has developed the dog paddle, fly, sidestroke, backstroke and crawl. Like dances, could you think of yet another swimming move? If we were unsinkable (by floatie belts), I could imagine just staying in place, and letting waves take you where they would.

<https://tinyurl.com/ye2yeazv>

Swimming pools

Comments:

- Swimming pools need a sensor that causes floor to rise if one's head is under water more than 30 seconds.
- Alternatively, we need a water-proof sensor for when a body's been under water too long (drowning alarm).
- You could have a kids' play pen in a pool (a 2-inch netting web, with bumper buffer).

Swimsuits (See also: Bikinis and Speedos)

Swing Sets

Comments: Consider:

- Strap-on over the top swing set bubble/tube.
- Padded swing set seats.
- Self-swinging swing.

<https://tinyurl.com/2p8vkryv>
rb.gy/bddd0

Swings

Comments: Couldn't we have huge swings, even for parachute jumps? Change the scale of your thinking, when you're innovating. Think BIG.

Swiss army knives

Comments: What more futuristic features or looks could these morph into? Few people need this fat of a compact knife set!

Synthesizers

Table shuffleboards

Tables

Comments: Tables can be quite mundane. Can you think of shapes, functions, materials or colors that might make them more exciting? You would help the world, if you could.
tiny.cc/31b9vz

Tablets

Comments: Interviewing users, and learning their changes trends could reveal futuristic adaptations and advancements.

Talk boxes/Voice boxes

Comments: Peter Frampton is famous for using this tool. What other sounds could be added to it, or to synthesizers, like sounds imitating real life?

Talk radio

Tampons

Tandem bikes

Comments: You could have the back rider rise to see over the front, and still be aerodynamic.

Tanks

Tanning beds

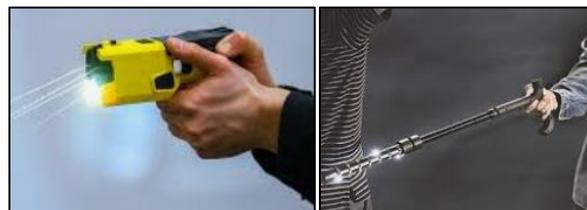

Tape measures (See: Measuring tools)

Tape recorders

Tattoos

Tasers

Comments: Futuristic ones need to be portable, smaller, and possibly even more powerful, or targetably accurate

Tea pots

Technology (See: Electronics)

Teeth (See also: Electric toothbrushes, Enamel, Flossers and Whitening toothpastes)

Teeth straightening (See: Braces)

Teflon

Teleprompters

Comments: Make the screen wider, with adjustable sized font, for older speakers.

Telescopes

Comments: These need much greater zoom, to see more up-close, or objects further away.

Telescreens

Comments: These need to evolve beyond mainly square and rectangular shapes, in my opinion, and become 3-D, or even holographic.

Televisions (See also: Channel changers)

Comments: Consider:

- Advertising-skipping (mute) device for radio and TV.
- Home Imax 3-D tool.
- 3-D holograph.

- New TV–hand sensing channel changing and 360-degree view of set.
- Open-world TV access system: for live scenes of places around the world.
- Expandable TV screen.
- TV and internet combine technologies.
- New, upgraded remote control channel changers of the future.

Tennis

Comments:

- Could players benefit from a curved tennis racquet?
- We need an automatic ball gatherer.
- Cyclopes line judging technology exists; how could it be improved?)

Tents (See also: Floating tents)

Comments: Interviewing users would show me their new needs (besides aesthetics).
 Self-popping-up (automatically), and more unique shapes might be a useful innovation.
 Interviewing users would show me their new needs (besides aesthetics).

<https://tinyurl.com/5xdt8bjj>
rb.gy/95hv2

Tequila shots

Texting

The pill

Theater (See: Broadway)

Thermometers (speak to)

Comments: Interviewing users would show me their new needs (besides aesthetics).
 Digital, and forehead scanners, are a great improvement/innovation we have seen in recent years.

tiny.cc/51b9vz

Thermos

Comments: Do their shapes always have to be cylindrical? (boring). Can they be made to heat up or cool down, by portable battery or other technologies?

tiny.cc/61b9vz

3-D printers

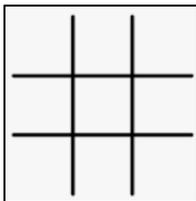

3-wheeled motorcycle

Comments: Add a sidecar, or a rolling seat behind, like parents sometimes add to bicycles.

Tic tac toe

Comments: has this been made into an online app, yet?

Tight ropes

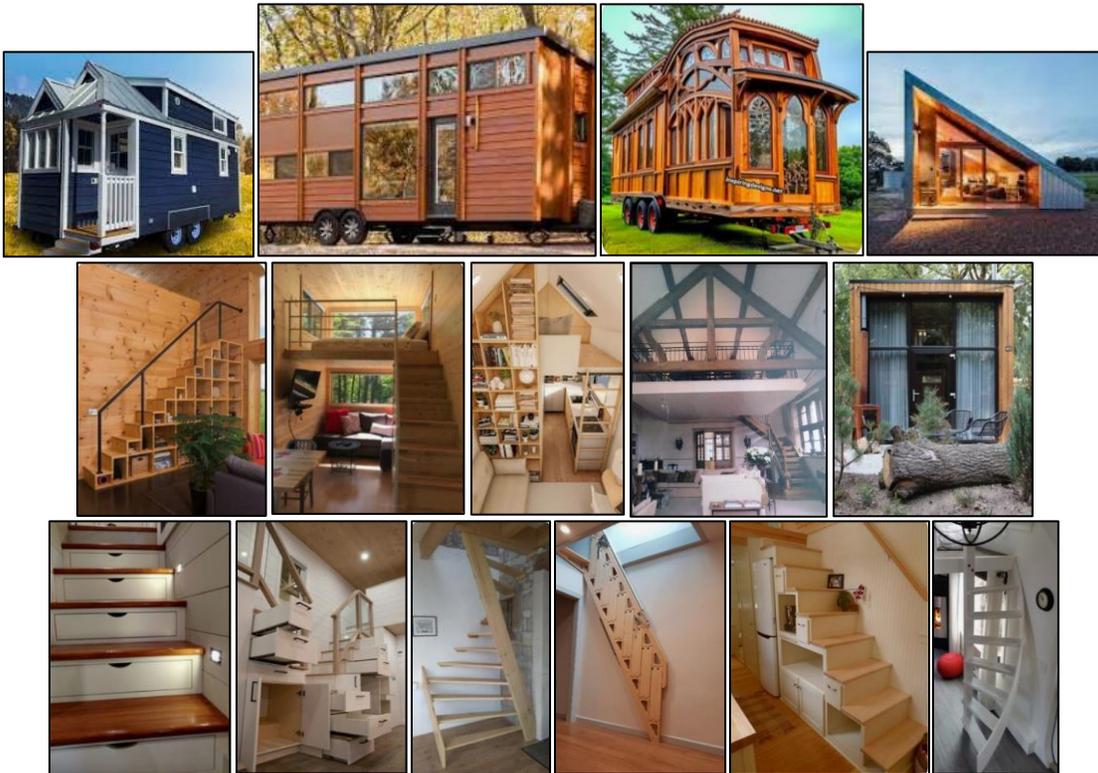

Comments: Nik Wallenda (and family) does this magically. Could new participants have emergency jet backpacks, if all goes south? Make very exciting and risky walks safer, yet still requiring great balance.

Tinker Toys

Comments: Modernize these to make skyscrapers (and other venues), vs. just log cabins—come into the 21st century.

Tiny houses

Comments: This category could be enhanced by the following innovations:

- Stairs turn out off a pole, then all turn back to be up against the wall (stairs take no space).
- Stairs stand upright, until pushed down to land on loft (for space saving).
- Bed is a loft, and folds down when sleep desired (Murphy bed).
- Slide out loft from a permanent loft (on rails) makes full second floor.
- Retractable ladder stairs (automated).

tiny.cc/71b9vz

Tire pressure gauges

Comments: These are very standard “stiff” shaped versions. Can they be made to be functional, yet more stylish? Rounded, different colors, or less bulky?

tiny.cc/81b9vz

Toaster ovens

Comments: Push button to select brownness/color. Modernize shape and/or style.

tiny.cc/91b9vz

Toilet plungers

Comments: Automatic pumping feature needed, like shake weights.

Toilet seats

Comments:

- Humans should never have to touch a toilet seat, large, small, or anywhere inbetween! They're gross, even if clean.
- And why do they have to be hard, and why do the soft ones have to be so cheaply made, that they tear/rip, or become unusable much quicker than plastic ones, due to adding a cushion function?
- Finally, there is no rational reason why the mere use of this everyday tool requires that the bolts attaching it to the toilet inevitably become loose, requiring the humiliating work of touching the back of the toilet to secure and affix it again? The answer, as always, is inferior design.

<https://tinyurl.com/3yskxwwk>

<https://tinyurl.com/47twf8wb>

Toilets (See also: Bidets)

Comments: By the very nature of the function toilets perform, people don't like unnecessarily touching them. Even new ones few would ever kiss. So WHY do we have to touch the seat, to adjust from a female doing her business to a male doing his standing up? And for big and tall people, the size of the toilet seat openings should adjust, as it can be a tight fit (though you don't want small people falling in). And, science has proved toilets use (which means waste) more water than is needed. Finally, be it sitting or standing, it is improper design that any male could ever wet himself, especially on his leg! The front of toilets (as with urinals) should always curve outward about 4 inches, in a very narrow and narrowing trough, so that indignity can never occur! (Pictures include wall-mounted, Kohler Karing and Toto toilet)

tiny.cc/a1b9vz

<https://www.trendhunter.com/slideshow/futuristic-toilets>

Toll roads

Comments: What new innovations could visit toll road and toll tags?

Tombstones (See: Gravestones)

Tonka Toys

Comments: Apply this concept to cars (including concept cars), running on batteries (like Match Boxes or Hot Wheels).

Tool boxes

Comments: These need an organizer, or screen for inside product identifier.
rb.gy/akkeo

Tool chests

Comments: How about digital labeled drawers?

Toothbrush holder

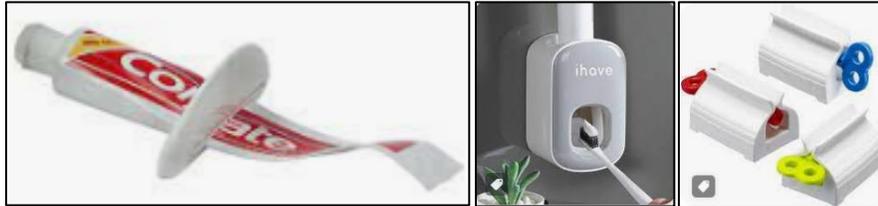

Comments: Some build up mold on the bottom (problem).

Toothbrushes (See also: Electric toothbrushes)

Toothpaste dispensers

Touch screen displays

Toys (See also: Big wheels, Dolls, Forts, Geo dome climbers, Hold-n-spinners, Stuffed animals, Swing sets, Tinker toys, Tonka, etc.)

Comments: This category could be enhanced by the following innovations:

- Cush toy that looks exactly like your deceased favorite pet in his prime.
- Low rider toys for any who would like it in the Hispanic (and other) community.
- Obesity doll gets pretty with exercise and eating right (educational sound tool), and opposite.
- Toys to encourage certain professions (Ex.: heart listening ear piece, for doctors).
- Doll translates language heard to teach kids language and help multicultural children's' conversations.
- Self-propelling child's wagon, with steering wheel.

<https://tinyurl.com/2bp5v42x>

Tractors

Comments: these are now highly computerized, and extremely precise and efficient in seeding, harvesting and plowing of fields.

tiny.cc/b1b9vz

Trailers

Comments: These are usually boxy and bulky. Just because a product is functional shouldn't prevent it from having some style, either in shape or aesthetics or color/patterns.

tiny.cc/c1b9vz

Trains

Comments: Box cars need more futuristic looks.

Trampolines

Comments: How could these become more futuristic? A foam springboard in the middle could project you upward, higher and faster.

tiny.cc/d1b9vz

<https://tinyurl.com/35bw5n4d>

Transportation (See: Airplanes, Buses, Cars, Hot air balloons, Trains, Motorcycles, etc.)

Trapezes

Trash cans (See also: Alley trash cans)

Comments: Self-cleaning and or self-sanitizing would be an improvement, besides aesthetic improvements. Self-emptying would be the ideal, as with automatically separating trash from recyclables.

[tiny.cc/f1b9vz](https://tinyurl.com/f1b9vz)

<https://tinyurl.com/3y8hp68u>

Trash compactors

Comments: What problems (or negatives) do these pose, and how could they again become more popular, for home use, with improvements?

Trash dumpsters

Comments: These are often bulky, boxy and otherwise unsightly. Besides shape and appearance improvements, if they were self-sanitizing, they would be more approachable, as they must be approached to be used.

[tiny.cc/22b9vz](https://tinyurl.com/22b9vz)

Travel

Comments: We need a global top destinations (wonders of the world-like) list (beach, mountain, etc.), that is not subjective to the critic. The world has some great places to visit.

<https://www.cnn.com/travel/article/tripadvisor-travelers-choice-awards-2022/index.html>

Treadmills

Comments: these need 3-D, live streaming internet scenery.

tiny.cc/h1b9vz

Tree blinds (See also: Fish finders, Hunting blinds)

Comments: Easily securing these to trees, or mechanical pop-up legs would be an improvement (or battery-powered expanding legs (like retractable/telescoping ladders perform)).

<https://tinyurl.com/ye27edk3>

Tree houses

Comments: What features or looks would make these more futuristic?

rb.gy/mj4sv

Tree trimming

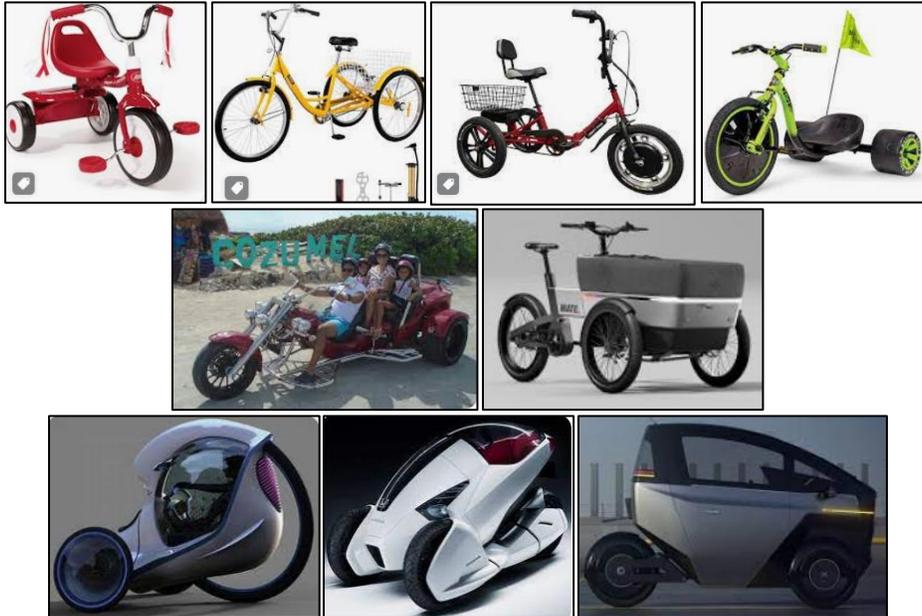

Comments:

- These have home and commercial uses.
- 50 foot up extendable tree trimmer with camera and VR (virtual reality) glasses would be an improvement (to avoid high tree climbs)
- Harnesses make it safer to climb up trees.

<https://tinyurl.com/4xsvj6v8>

<https://tinyurl.com/y42w5ysf>

Tricycles/trikes (See also: Caster trikes)

Comments: We need a bouncing 3-wheeler bike, and trikes need to be able to not fall over (at least without the rider having a helmet on).

<https://tinyurl.com/y9m6eftd>

Trifocals

Trivial Pursuit

Truck races

Tubs (See: Bath tubs)

Tub water jets

Tube tops

Tug boats

Comments: Interviewing users would show me their new needs (besides aesthetics).

Tupperware

Comments: Though these would appear to require flat surfaces, for stacking, new shapes and colors would make them less boring, though innately a functional product.

tiny.cc/i1b9vz

Turnstiles

Tuxedos

Tyvek

Twister

Comments: Make this sexier, for adults? (Cf.: modern post office game).

Twitter

Uber Eats

Umbrellas (See also: Sun umbrellas)

Comments: We could use a flat umbrella hat, as a sun block, that doesn't block anyone's view behind you, like in sports stadium seating.

rb.gy/29a58

Underwater scooter

Underwear

Comments: Problems to fix: They stretch, don't always have easy access, can suffer drippage, can be tight vs hang loose), and are usually white. Innovations fix problems.

Unicycles

Comments: We need a motorized unicycle and tandem unicycle.

Urgent care clinics

Urinals

Comments: Under no circumstances should a weak flow (or water in the unit) allow nature to cause splatter on the floor or user's legs. You design around potential negatives! Some people may have use for commercial urinals for home use.

rb.gy/fljjj

Vacuum cleaners

Comments: The more powerful and light weight the better, as with durability and life extension. Cordless, battery powered ones not connected to a ground-based source, but worn as a backpack, might be an improvement (like commercial leaf blowers).

tiny.cc/j1b9vz

Valets

Vans

Vaping

VCRs

Vegematic

Veggie burgers

Velcro

Vending machines

Veneers (See also: Dentures)

Comments: In my opinion, the most perfect imitation teeth would not make one look like a diamond is sparkling in a TV commercial white, but more natural off tones, and every tooth being the perfect man-made shape also screams “fake.” Deceiving people that they are your own/originals is the greatest compliment to their manufacturers!

Venetian blinds

Viagra

Virtual reality glasses

Comments: These must become smaller, with even greater capacity, and it would be great to have a combination of reality and fantasy, where they could be worn for real life activities, not observable by everyone, but also benefitting from the virtual additions they bring to life situations.

<https://tinyurl.com/2dvw3d27>

Visors (See: Face visors)

Voice mail

Voice recognition technologies

Voting machines

VW bug

Waffle makers

Wagons

Comments: Why does everything seem to be boxy or rectangular, when human bodies embody many curves and French curves, being natural? Also, these wheels have little maneuverability/flexibility. Shock absorbers might even be helpful for off-“road” uses.
rb.gy/zskf

Wake boards

Comments: Could you use shoulder-attached wings, to get greater height? Can the underside of these boards be designed to cut through water more efficiently?

Walkie Talkies

Comments: Are there any newer applications (uses), or third world uses? Their range is often short, clarity sometimes muzzled/muffled, and talking over another shouldn't be mechanically allowed.

Visors (See: Face visors)

Walking canes (See: Canes)

Walking casts

Walking sticks

Comments: Could these be designed to audibly inform blind people of their physical circumstances? They need not be straight (as racing snow skier poles demonstrate). They're rarely aesthetic, or stylish, and, as with most products, stronger yet lighter weight is always preferred (as with new materials used). Their pods (or ends) need some traction, especially when walking in dirt or rock (which can move).

<https://tinyurl.com/29rfmn2h>

Walkmans (See also: Boom boxes)

Comments: Is there a more modern use of these, now that smart phones have more sophisticated headphones? Either of those machines need to be attachable to one's body, as they exercise, and not simply placed into a pocket, where they can slip out, upon

jarring movement. Note technological evolutions, and what caused their need, like from 8-tracks, to cassettes, to CD's, and now digital music.

Wall hangings & attachments

Comments: Negating the need for holes in the wall is a Scotch brand improvement, of fairly late. Images need to be changeable, through computer, where ambiance can adjust style, colors, or themes (especially in restaurants). Their location on the wall should also be adjustable, without more nail holes, for varied fashion, from time to time.

Wallets/billfolds (See also: Money clips, Purses)

Comments: Patterns and styles of their exteriors should be customizable, and perhaps more variety is needed in their materials (vs. mainly leather or plastic). We can have mono-, bi- and trifold, and new materials, colors; how could they be flatter, or even electronic?

Walkers

Comments: What would more futuristic ones look and function/operate like? Rollers on back legs? Tennis ball rollers are clearly homemade.

Warehouses

Warming trays

Washing machines

Comments: Now we have a 2 in 1 washer-dryer. If these adjusted to the height right for the user's size (for eye-level functionality), the area beneath could be utilized for other uses.

tiny.cc/k1b9vz

Watches (See: Wrist watches)

Water beds

Comments: They should be comfortable, but their materials should never be puncturable (for obvious reasons). And you should be able to increase or decrease the firmness of their contents, like a Sleep Number bed can. No one should ever get sea sick, overnight, with too soft and sloshy a sleep!

rb.gy/fzz47

Water coolers (See: Coolers)

Water faucets

Comments: Quicker hot and cold would be an improvement, as with sensed on and off features, as with voice activated on and off features.

<https://tinyurl.com/mwz9ha53>

rb.gy/tmufc

Water filters

Comments: Water should be cleaned and filtered much quicker than current state. And the chemicals or particles that cause the purification should last longer, so replacements aren't needed as often.

tiny.cc/m1b9vz

Water & drinking fountains

Comments: Sanitation in public places should be available, especially if anyone ever drips water from their mouth, when drinking, back onto the faucet. Cool water should be made available on hot days, with public use (not warmed by the sun). These units should never be allowed to remain on, but should self-shut off, after a brief usage. Outdoor fountains should make shapes and patterns in the air, like The Bellagio in Las Vegas does! We are too accepting of just water falling, or a spew into the air, as unique, after all the time we have had this technology.

tiny.cc/n1b9vz

<https://tinyurl.com/54ddyyst>

Water guns (See: Super soakers)

Water heaters

Comments: Using them, or interviewing users would show me their new needs (besides aesthetics). What better features and functions are needed? (I'm not mechanical enough to guess)

Water parks (See also: Amusement parks, Fairs)

WaterPiks

Water shoes

Comments: All patterns, shapes, colors and images should be available, including customizable shoes. Porous water holes lining the bottom would provide coolness, yet stability of traction from the rubber or plastic bottoms and soles. Self-tightening technology, like with Sketchers, should be designed in, if ever not.

rb.gy/Ojnim

<https://tinyurl.com/swmyf52f>

Water skiing products

Comments: Water ski with wings on shoulders (or as a neck harness) might help one “fly.”

Water towers

Comments: These static structures would be great, built-in venues for scrolling advertising (for businesses or cities), so messages can be varied (including charging for the use, to provide government revenue).

tiny.cc/o1b9vz

Water skis (See also: E-foil, Foil surfing, Surfboards)

Water trampoline

Waterwheels

Comments: Disabled people need a floating wheelchair.

Wave-making machines (See: Water parks)

Weapons (See also: Guns, Hand grenades)

Comments:

- Computer-aided accuracy would be an improvement.
- Bullet deflection technology is needed.
- Detect terrorist technology is needed (likely requiring intention detection in the brain).
- We need gun nearby detectors, or a gun barrel is aiming at you detector (vs. the public being sitting ducks).

Weather products

Comments:

- We need anti-hail shooters.
- California wildfires need sucked up ocean water (or nearby pools).
- We need better earthquake predictors.
- Some people have an iron clad tornado box in their garage (empties easily for 4 people).
- Trailer parks, in a tornado, could use securing wires/cables, like TV antennas.

<https://tinyurl.com/ywum3vca>

<https://tinyurl.com/mw83s5jc>

<https://tinyurl.com/ynmaafnr>

<https://tinyurl.com/ycx8teer>

<https://tinyurl.com/bdff4e9b>

<https://tinyurl.com/5ys8zfrp>

Weed & feed

Weight loss programs

Weight scales (See also: Commercial scales)

Comments: Travelers need a portable, un-bulky weight scale.

tiny.cc/p1b9vz

<https://tinyurl.com/2p8h73x7>

Weighted vest (See also: Ankle weights and Back braces)

Comments: This contraption shows the ankle weights idea taken to a new application, by re-thinking. No one said ankles are the only body parts to absorb more pressure, for exercising. These should even out their pull (back and front), be stylish, possible functional (storage compartments), and other areas (like one's waste or head) could also carry this load.

Wet/dry vacuums

Wetsuits

Wheelbarrows

Comments: In the future, these could be remote controlled or automated, even computer directed.

rb.gy/sct86

Wheelchairs (See also: E-wheels)

Comments:

- Some may need these to be enclosed and foldable.
- Some wheelchairs need to be portable.
- Add-on thick plastic ramps for all public access locations could help with mobility.

tiny.cc/q1b9vz

<https://tinyurl.com/49c9uswd>

Wheelchair baths (See: Wheelchair tubs)

Wheelchair swing

Wheelchair tubs

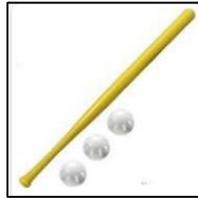

White boards & marker boards

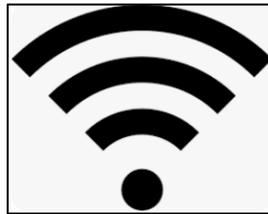

Comments: Smart versions should allow non ink pens to be utilized, with no clean-up (senses the letters, and computers display results). Their typically square or rectangular shapes are also annoying to this designer, as not mirroring more natural (or exciting)

shapes. Could 3-dimensional drawings come of this technology, as 2-dimensional drawings are drawn?

Whiffle ball & bat

Wi-Fi

Wigs/toupees

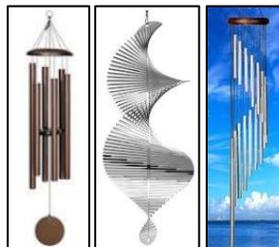

Wii & Gaming apps (Gameboy, PlayStation, X-box, Nintendo switch)

Wild mouse

Wind chimes

Wind socks

Comments: Shapes, size and designs/patterns/images seem the most likely improvements/developments to this product. Possibly designing for wind gusts to move them in certain ways would make them more interesting, using flaps and openings.

<https://tinyurl.com/yckmkxa5>

Wind surfing

Windmills

Comments: Increasingly relied on for energy sourcing, could blades pick up more wind if smaller yet wider (like sails on a boat), lighter weight, or using new materials? Stylistically, they can be seen as eyesores, and birds sometimes get killed by them.

Window washers

Windows

Comments: Doors should never be able to be kicked in, or their bolt locks circumvented by human force, if we go to the trouble to make the doors themselves sturdy and strong

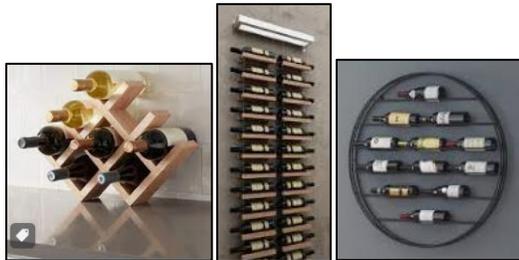

for protecting those behind them! Also, no innocent should ever be trapped inside a burning structure, like a child unable to unlock or open a door, in distress, or being too young of age to maneuver.

tiny.cc/r1b9vz

Windshield replacement suction tool

Wine racks

Comments: All different shapes, sizes, colors and textures are possible, to make them more artistic. Or, they can be more functional, if their openings matched the shape and size of most wine bottles.

rb.gy/kl15t

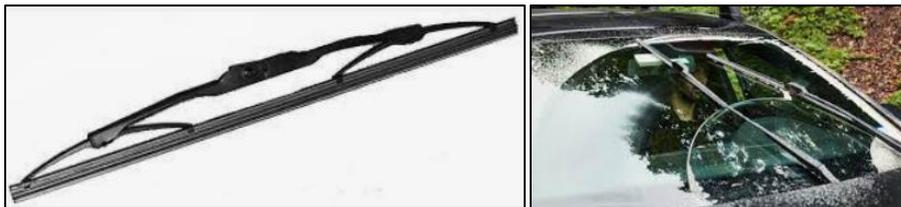

Wine refrigerators

Wineries

Wines

Wiper blades

Women's shoes (See: Shoes)

World wide web/Internet (www)

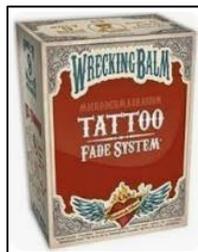

Wraps (See: Food wraps)

Wrecking ball

Comments: More accurate maneuverability should be allowed (more control by the operator), especially utilizing a computer or camera seeing where the ball is aimed/heading (to bring down edifices).

Wrecking balm

Comments: This product is designed to eliminate, or lessen the impact of tattoos. Interviewing users would show me their new needs (besides packaging aesthetics).

Wrenches

Comments: Wrenches need to automatically cinch down on nuts (vs. manual control only).

Wrist watches

Comments: The band, for this designer, is bulky (even though varieties of styles and patterns are now available). The face should be able to remain on your wrist, absent the bands, somehow (or a band could be see through, and very thin but strong). Endless artistic varieties/options of the face itself are possible, including digital time indicators.

rb.gy/nylh6

X games

Comments: This exciting sports/entertainment genre includes such sports as skiing, snowboarding, BMX biking, and skateboarding)

XM & digital radios

Yachts

Comments: The underbelly seems mold attracting, and they should be shrinkable/collapsible, when not fully needed.

<https://tinyurl.com/mj7k2ta6>

tiny.cc/s1b9vz

Yard bags

Comments: This is an example of government-required products the private sector developed, cited as an example to show that not everything the government mandates hurts businesses.

tiny.cc/32b9vz

Yard signs

Comments: Digital, yet secure from theft, seems like an obvious needed iteration.
tiny.cc/t1b9vz

Yo-Yo's

Comments: Sound, music, sparkles and glowing versions (for at night) would be innovative (may already exist), as with larger size, new balanced external shapes, or sparklers.

<https://tinyurl.com/4t8ystap>
<https://tinyurl.com/3cmek64k>

Zero turn lawnmowers

Comments: Rather than just 360 degree maneuverability, these machines need an appendage to cut narrow or hard to reach areas these machines would simply bump into.

Zip lines

Comments: We can have these, at home, with trees, or sunken posts.

Zip lock

Zip ties

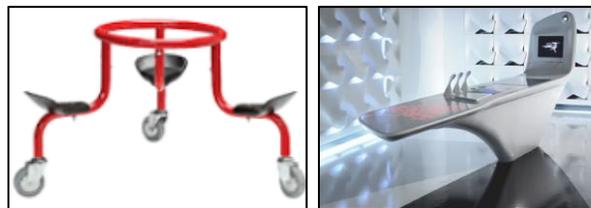

Zorb

Comments: These ball bubble suits need users able to see well through them. A gyroscope in the middle would allow stable rides, even as the ball rolls.

Failures?

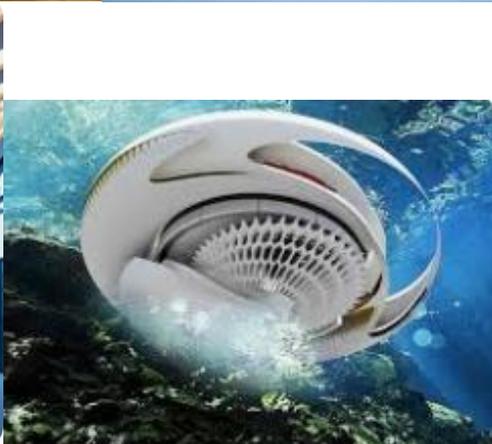

Not all inventions are good ones. This one was designed for kids to communicate. It needs pedals and steering, as well as possible solo use. Few people want to live in Martian homes, when they look out and see earth (or in circular rooms)

Samsung Smart Sight: See the World Clearer than Ever

While some tech companies are exploring wearable glasses as their next revolutionary smart device, Samsung is going one step further. After all, why wear cumbersome glasses when you could have a discreet, seamless contact lens that will project information directly into the user's field of vision?

Enter the iScribe Air. The smart stylus that requires no touch-sensitive surface to bring your creations to life. Perfect for writers, designers and artists to develop their craft or even just for everyday use when jotting down a quick list, note or message.

8. A **motion-sensor trash can** that'll smoothly and quietly open up with a simple wave of your hand so you can feel like a magician every time you have to throw something away.

5. A **rechargeable sonic facial cleansing brush** that gives off sonic pulsations to remove up to 99.5% of dirt, oil, makeup, and dead skin cells while providing gentle exfoliation.

The **LG Autonomous Robot** is a quick way to disinfect high-touch surfaces. It's an ideal solution for the education, hospitality, restaurant, retail and corporate sectors since this robot uses ultraviolet light to sanitize large areas in minutes.

8. A **motion-sensor trash can** that'll smoothly and quietly open up with a simple wave of your hand so you can feel like a magician every time you have to throw something away.

10. A **motion-sensor toilet light** because, in the future, you don't have to turn on the harsh, unforgiving light that'll wake you up completely when stopping by the bathroom in the middle of the night.

16. A **space pen** – it can write at any angle, even upside-down! You can use it to write under water, in extreme temperatures, or even in zero gravity, if you find yourself often needing to jot something down in less than ideal conditions. In other words, yes it's basically that pen from *Seinfeld*.

21. A TikTok-famous **bagless, touchless stationary vacuum** to make you wonder why you ever owned a regular dustpan. No more bending over and transporting your filth to the trash can — now you can just sweep directly over to this ingenious device and watch it slurp up every last crumb.

17. An antioxidant-rich **magnetic mask** that'll help extract impurities and will lift right off with the included magnetic wand!

Looking Glass

2. A **Dyson hair dryer** that honestly looks like it dropped out of a UFO. But in all seriousness, it dries hair so quickly and quietly, you'll wonder if it's actual alien technology.

6. An **automatic pet feeder** so you can pre-schedule when food gets dispensed for your furry friends or even feed them remotely from your smartphone.

13. Some high-fidelity, nearly-invisible **earplugs** designed to cut down on the decibels during all your favourite concerts, so your hearing stays protected without completely muffling the music's clarity and sound quality.

19. A **wireless pocket projector** for accessing a giant screen anytime, anywhere. The best part is it can fit in the palm of your hand.

Reevo Hubless eBike

The **Reevo Hubless eBike** has a triple-barrier antitheft system that includes biometric access, integrated electric locks, theft detection and alerts, and GPS tracking. Furthermore, all your necessary bike-riding peripherals come integrated in the Reevo. There are brake lights, headlamps, turn signals, locks, and a phone cradle that all charge at the same time as your bike. And the detachable battery lets you swap it out for an instant boost.

Nike Air Jordan XI Adapt Jumpman Shoes

An homage to the past and a nod to the future, the **Nike Air Jordan XI Adapt Jumpman Shoes** use power-lacing technology. Boasting a self-lacing design, these Air Jordans are still similar to the original shoe shape from 25 years ago. They may look like a retro athletic shoe, but the Nike Air Jordan XI Adapt kicks are pretty futuristic.

Open Bionics x Konami Venom Hero Bionic Arm
